COLONIALS

Rare 1662 Noe-29 Oak Tree Twopence, XF40

- 1 **1662 Oak Tree Twopence XF40 PCGS.** Small Date. Crosby 1-A2, Noe-29, W-240, R.6. 10.0 grains. The small and distant 2 identifies this rare Noe variety. A nicely detailed example with apple-green and rose patina. Softness of strike is limited to the right reverse border. The obverse is misaligned toward 4:30, affecting a few peripheral letters. A pair of thin marks are noted at 3 o'clock on the reverse. Listed on page 36 of the 2010 *Guide Book*. (#17)

AU Noe-29 1662 Oak Tree Twopence

- 2 **1662 Oak Tree Twopence AU50 PCGS.** Small Date. Crosby 1-A2, Noe-29, W-240, R.6. 10.8 gn. Again, the small and distant 2 identifies this elusive Noe variety. This lustrous example displays little, if any wear, and the tree, denomination, date, and peripheral legends exhibit a pleasing strike. The reverse has ideal centering, while the obverse is slightly misaligned toward 7 o'clock. The pearl-gray and gunmetal-blue surfaces are somewhat wavy but lack abrasions. Listed on page 36 of the 2010 *Guide Book*. Population: 5 in 50, 29 finer (6/09). (#17)

Impressive Near-Mint Noe-33 1652 Pine Tree Sixpence

- 3 **1652 Pine Tree Sixpence AU58 NGC.** Crosby 1-A, Noe-33, W-670, R.3. 33.3 grains. Pellets at trunk. Struck from misaligned dies with the obverse off-center at 12 o'clock and the reverse normally centered, diagnostic for the variety. Those with the obverse and reverse both centered are cataloged as Noe-33a. Today, Noe-33 is the only collectible Pine Tree sixpence, known to the extent of 200 to 300 pieces. Less than two dozen examples of the other two varieties are known in all grades.

This appears to be one of the finest surviving examples of the variety, finer than either the Hain or Ford specimens, based on comparison with the catalog photos. It has lovely gray and dark blue color, with traces of iridescent highlights on both sides. Listed on page 37 of the 2010 *Guide Book*. (#22)

Popular 1652 Noe-17 Pine Tree Shilling, VF25 Small Planchet Type

- 4 **1652 Pine Tree Shilling, Small Planchet VF25 PCGS.** Crosby 22-L, Noe-17, W-840, R.3. A pleasing example of the Small Planchet variety with attractive medium to dark gray surfaces. The design is imperfectly centered, as commonly seen on these pieces. However, the entire obverse and reverse legends are on the planchet. Listed on page 37 of the 2010 *Guide Book*. (#24)

Wonderful 1652 Noe-30 Pine Tree Shilling, XF40

- 5 **1652 Pine Tree Shilling, Small Planchet XF40 NGC.** Crosby 13-S, Noe-30, W-935, R.3. 71.0 gn. The upper left obverse and upper right reverse are poorly defined due to uneven striking pressure. The strike is imperfectly centered, with the tops of some letters off the flan. The surfaces are wonderful deep steel and tan, with lighter gray devices. Listed on page 37 of the 2010 *Guide Book*. (#24)

Important AU Lord Baltimore Sixpence

- 6 **(1659) Lord Baltimore Sixpence AU50 NGC.** Hodder 2-C, W-1060, R.5. The Lord Baltimore sixpence is clearly the most plentiful of the four different denominations, yet it is a rarity in relation to most Colonial and U.S. coins. This lovely piece has medium gray surfaces with splashes of deeper steel patina and hints of lighter gold toning. Listed on page 38 of the 2010 *Guide Book*. (#33)
- 7 **(1694) London Elephant Token, Thick Planchet VF25 PCGS. CAC.** Hodder 2-B, W-12040, R.2. Somewhat weak on the reverse but a pleasing example with attractive medium brown surfaces and few imperfections. The elephant motif seems a most unusual choice for a Colonial American coin produced in England. Listed on page 44 of the 2010 *Guide Book*. (#55)

Near-Mint 1722 D. G. REX
Rosa Americana Halfpenny

- 8 **1722 Rosa Americana Halfpenny, D. G. REX AU58 PCGS.** Breen-133. UTILE DULCI. Stops after REX and 1722. A sharply struck olive-brown piece with a dash of mauve patina on the obverse center. The obverse is beautifully smooth, while the reverse has only a couple of unimportant marks. A touch of wear on the rose accounts for the grade. Listed on page 40 of the 2010 *Guide Book*. Ex: FUN Signature (Heritage, 1/2007), lot 48, which realized \$2,875. (#101)

Challenging Uncirculated D:G:REX
1722 Rosa Americana Halfpenny

- 9 **1722 Rosa Americana Halfpenny, D. G. REX MS61 Brown PCGS.** Martin 2-B, W-1218, High R.4. DEI GRATIA is abbreviated on this scarce Rosa Americana variety. Mahogany-brown toning, deepest on the devices, with glossy unperturbed surfaces. The reverse is triple struck with a minute clockwise shift between blows. Listed on page 40 of the 2010 *Guide Book*. Population: 1 in 61 Brown, 5 finer (6/09). Ex: Liberty Collection of United States Colonial Coinage (Heritage, 1/2008), lot 15, which realized \$3,737.50. (#101)

MS66 Brown 1723 Hibernia Halfpenny

- 10 **1723 Hibernia Halfpenny MS66 Brown PCGS. CAC.** Martin 4.14-Fb.2, R.4. W-13470. A chocolate-brown Premium Gem with undisturbed surfaces and a precise strike. Hints of mint red remain within the obverse legend. A remarkable example of this Irish import. Listed on page 43 of the 2010 *Guide Book*. Population: 1 in 66 Brown, 2 finer as 66 Red and Brown (6/09). (#180)

Chocolate-Brown Select Mint State
1724 Hibernia Halfpenny

- 11 **1724 Hibernia Halfpenny MS63 Brown PCGS.** Martin 4.67-K.3, R.2. W-13690. A glossy chocolate-brown Select Hibernia halfpenny with traces of mint red in obverse crevices. Well struck save for the upper legs of the seated figure. Unabraded, although a slender flan flaw connects the rim to the king's forehead, with another minor planchet flaw near the I in HIBERNIA. Listed on page 43 of the 2010 *Guide Book*. Population: 1 in 63 Brown, 1 finer (6/09). (#190)

- 12 **1744-BB French Colonies Sou Marque MS65 PCGS.** Breen-616, Vlack-257, R.2. **Incorrectly designated as 1744-A by PCGS.** An attractive Gem example of this French Colonies issue. The luster is primarily satiny silver-white, though splashes of peach are also visible. A number of parallel planchet lines pass over the L on the reverse. Listed on page 51 of the 2010 *Guide Book*. (#158620)

**Pursued Pewter 1776 Continental Dollar
CURRENCY, Newman 1-C**

- 13 **1776 Continental Dollar, CURRENCY, Pewter PCGS Genuine.** Newman 1-C, W-8445, R.3. This well detailed Continental dollar has a charcoal-gray obverse and lighter steel-gray, olive, and pearl-gray reverse toning. A few pinscratches on the reverse are noted, mostly within the New Hampshire and Connecticut rings. The reverse border at 3 o'clock has a flan crack. The outer obverse ring is irregular near the sun and the Y in CURRENCY. The PCGS Genuine code corresponds to "Damage." Listed on page 81 of the 2010 *Guide Book*. (#791)

**AU Details 1776 Continental Dollar
Pewter, CURRENCY, Newman 2-C**

- 14 **1776 Continental Dollar, CURRENCY, Pewter—Corroded—NCS. AU Details.** Newman 2-C, W-8455, R.3. A deep gray example of this historic and enigmatic Revolutionary War issue. Nearly full design detail is present, but several spots of tin pest are present on each side. The reverse border between 2 and 3 o'clock has inconspicuous scrapes. Glimpses of luster emerge from the designs. Struck from widely rotated dies. Listed on page 81 of the 2010 *Guide Book*. (#794)

**Borderline Uncirculated Ryder 3-G
1787 Massachusetts Cent**

- 15 **1787 Massachusetts Cent, Arrows in Left Talon AU58 NGC.** Ryder 3-G, R.3. A medium-brown commonwealth copper that exhibits shimmering luster once rotated beneath a light. The shield and Indian's clothing show moderate friction. The central reverse displays a few minor marks. Listed on page 57 of the 2010 *Guide Book*. (#302)

**Near-Mint 'Laughing Head' Miller 6.1-M
1787 Connecticut Copper**

- 16 **1787 Connecticut Copper, Laughing Head AU58 NGC.** Miller 6.1-M, R.1. The "Laughing Head" type is unrecorded on the NGC insert. An attractive and well-centered chestnut-colored example, crisply struck on a problem-free planchet. The obverse is remarkably clean, while the reverse has a rim bruise at 5 o'clock and a vertical scratch to the right of the shield. Listed on page 59 of the 2010 *Guide Book*. Census: 1 in 58, 1 finer (6/09). (#358)

- 17 **1783 Nova Constellatio Copper, Pointed Rays, Large US AU50 NGC.** Crosby 1-A, W-1860, R.4. Offering smooth medium brown surfaces with excellent eye appeal, this attractive problem-free piece is sure to please most collectors. Listed on page 52 of the 2010 *Guide Book*. (#804)

- 18 **1787 Fugio Cent, STATES UNITED, 4 Cinquefoils, Pointed Rays AU55 PCGS.** Newman 13-X, W-6855, R.2. Medium brown to chocolate-brown with smooth, problem-free surfaces. The left border is softly brought up due to the die alignment. Struck from clashed dies and housed in a green label holder. Listed on page 83 of the 2010 *Guide Book*. (#883)

**Important 1778-79 Rhode Island Pewter
Ship Token, High R.6, AU53**

- 19 1778-1779 Rhode Island Ship Token, Wreath Below, Pewter AU53 PCGS.** Breen-1142, W-1745, High R.6. Just over a dozen of these pewter pieces are known, and they seldom appear on the market. We have only handled about 10 auction appearances of the pewter pieces in the last 15 years, every one grading between XF45 and AU55. Medium gray surfaces have hints of luster and a few dark obverse spots. Listed on page 48 of the 2010 *Guide Book*. (#585)

**Sharp MS63 Kentucky Token, Breen-1162
Only NGC-Certified Engrailed Edge Example**

- 20 (1792-94) Kentucky Token, Engrailed Edge MS63 Brown NGC.** Breen-1162, W-8805, R.6. The engrailed edge is described as "GR Edge" on the NGC holder, an abbreviation for gripped edge. The engrailed edge pieces are rarer than either the plain edge or LANCASTER edge coins. This sharply struck medal-turn example is golden-brown with subtle plum-mauve and lime undertones. The reverse is beautifully unabraded, and the obverse has only faint abrasions. A thin line on the lower right obverse is of little import. Listed on page 71 of the 2010 *Guide Book*.
Ex: *Liberty Collection of United States Colonial Coinage* (Heritage, 1/2008), lot 101, which realized \$2,530. (#617)

**1795 Talbot, Allum & Lee Cent
Lovely Gem Brown Proof**

- 21 1795 Talbot Allum & Lee Cent PR65 Brown NGC.** Fuld-1, W-8620, R.1. This boldly struck proof representative has exceptional mirrored fields, entirely full design definition, and a delightful blend of blue-green toning and orange mint color. The Talbot, Allum & Lee cents are plentiful in Mint State grades, but seldom seen in proof format. Listed on page 72 of the 2010 *Guide Book*. (#640)

**Flashy PR63 Brown 1795
Talbot, Allum & Lee Cent**

- 22 1795 Talbot, Allum & Lee Cent PR63 Brown NGC.** Fuld-1, W-8620. A flashy proof that reveals caramel-gold, mahogany, and powder-blue shades when rotated beneath a light. A razor-sharp specimen with a few tiny ticks and hairlines on the fields. Proof Talbot, Allum & Lee cents were likely struck for Kempson's Mint salesmen to demonstrate token quality to prospective clients. Listed on page 72 of the 2010 *Guide Book*. Census: 2 in 63 Brown, 1 finer (6/09). (#90640)

**Lovely PR63 Red and Brown
1795 Talbot, Allum & Lee Cent**

- 23 1795 Talbot, Allum & Lee Cent PR63 Red and Brown NGC.** Fuld-1, Breen-1035. Mellowed mint red and powder-blue grace the obverse. The reverse is ocean-blue and olive with peripheral rose tints. Well struck and flashy with a few faint hairlines on the lower right obverse. Business strikes are listed on page 72 of the 2010 *Guide Book*. (#90641)

**Near-Mint Baker-7 1783
Georgivs Triumpho Token**

- 24 1783 Georgivs Triumpho Token AU58 NGC. Baker-7, W-10100, R.3. Believed contemporaneous with its date, this token bears a portrait of General George that more closely resembles King George. The usual die state with a heavy vertical die break across the left (facing) shoulder of the standing figure. A charming medium brown representative with bold definition and only a hint of wear on Washington's nose and the chest of the reverse figure. Listed on page 75 of the 2010 *Guide Book*. (#664)

**MS62 Brown Small Military Bust, Baker-4A
1783 Washington & Independence Cent**

- 25 1783 Washington & Independence Cent, Small Military Bust, Plain Edge MS62 Brown NGC. Baker-4A, W-10155, R.5. A glossy golden-brown Washington piece with slightly deeper gray toning near the rims and above the portrait. Well struck aside from the thigh of the seated Liberty figure. Only lightly abraded save for a faded, thin mark near the U in UNITED. Minor buildup within the legends confirms the originality. Rarely seen in Mint State. Listed on page 75 of the 2010 *Guide Book*. (#670)

**MS63 Brown 1783 Washington Cent
Rare Baker-3D Corded Edge**

- 26 1783 Washington & Independence Cent, Draped Bust, No Button MS63 Brown PCGS. Baker-3D, W-10330, High R.7. A mildly prooflike walnut-brown representative with well struck devices and lightly impressed borders. A faint fingerprint near the N in UNITED and a hair-thin mark beneath the first T in STATES are of little import. Obverse die (Vlack 16) of Baker-3C with small ampersand and a small 3 (unlike Vlack 17), but the edge is corded instead of plain, and the reverse die differs, clashed near the right (facing) elbow and with die lines protruding from the rim at 4 o'clock. A fascinating piece for study by the Washingtonia specialist. Listed on page 76 of the 2010 *Guide Book*. (#676)

**Gem 1795 Washington Grate Halfpenny
Large Buttons, Reeded Edge**

- 27 1795 Washington Grate Halfpenny, Large Buttons, Reeded Edge MS65 Brown PCGS. Baker-29A, W-10955, R.1. A gorgeous Gem that features blended chocolate-brown and steel-blue toning. The strike is penetrating, even on LONDON, and the fields show only inconsequential contact. Listed on page 79 of the 2010 *Guide Book*. Population: 4 in 65 Brown, 0 finer (6/09). (#746)

**AU58 Silvered Small Size, Reeded Edge
Washington Success Medal, Baker-267B**

- 28 Undated Washington Success Medal, Small Size, Reeded Edge, Silvered AU58 PCGS. CAC. Baker-267B, W-10875, R.5. Scarcer than the nonsilvered brass reeded edge variety (Baker-267). A cream-gray example with delicate olive-green tints. Attractive and problem-free with a crisp strike save for the unavoidable softness on the all-seeing eye. Listed on page 80 of the 2010 *Guide Book*. Population: 4 in 58, 1 finer (6/09). (#790)

HALF CENTS

Important AU C-3 1793 Half Cent

- 29 **1793 AU50 PCGS.** C-3, B-3, R.3. The obverse with small 7 in the date and the L in LIBERTY lower than the rest of the word, the reverse lightly rusted and “overstuffed” with the numerous leaves and berries of the wreath crowding other elements, particularly the fraction, which has the ribbons drawn severely to either side. Though lightly worn, this example offers excellent surface quality, with glossy brown fields showing occasional hints of gold and plum. Neither side shows any individually mentionable marks, and this piece’s overall eye appeal is a match for its high preservation. EAC 35. (#1000)

Desirable 1794 C-7 Half Cent, VF Details

- 30 **1794—Damaged—NCS.** VF Details. C-7, B-7, R.5. Manley Die State 1.0. There are no apparent clash marks, and the usual die crack through the E of UNITED is light. The sharpness would place this coin in the top 10 known, and overall we place the coin among the best 15 or so examples that survive today. The majority of known examples are in much lower grades.
Although the edges are somewhat bruised and the surfaces and noticeably marred, there are no readily visible imperfections that equate to a damaged coin. Both sides have pleasing medium brown surfaces with some lighter tan and traces of deeper steel toning. When our consignor purchased this coin in 1976, it had a rating of R.6 and was his first R.6 variety. EAC 10.
Ex: Jack Borckardt (5/1976). (#1003)

Late State 1794 C-4a Half Cent, VF30

- 31 **1794 VF30 NGC.** C-4a, B-6b, R.2. Breen Die State VII, with a die crack from the reverse border to the M and the berry below. Both sides have heavy clash marks and other die cracks, with a heavy die bulge at the lower left obverse. Manley Die State 4.0. Breen and Manley both record this die state as the latest known to them. Breen calls it “rare” and Manley states that it is “very scarce.”
Although slight granularity covers a small part of the reverse, the overall quality is excellent and far above average for the date. Most of the apparent abrasions, especially on the obverse, are original planchet marks that remained after the coin was struck. EAC 20.
Ex: Tom Reynolds (9/1989). (#1003)

Lovely 1794 C-9 Half Cent, XF40

- 32 **1794 XF40 NGC.** C-9, B-9, R.2. Manley Die State 1.0. There is no evidence of the normally seen die crack from the obverse border to the cap. Clash marks are evident in the usual locations. The reverse die is perfect. The surfaces of this pleasing piece are light chocolate, with slightly darker brown on the high points. Traces of verdigris are present, but of no consequence, as are the trivial surface marks noted. This lovely piece is ideal for a date or type collector. EAC 30. (#1003)

- 33 **1794—Corroded—ANACS. XF40 Details.** C-2a, B-2b, High R.2. A sharply defined half cent that clearly shows the characteristic C-2 clash marks beneath the chin and along the profile. The dark brown fields are only moderately granular, save for a slender reverse streak from 3:30 to 5:30. EAC 20. (#1003)

Early State 1794 C-1a Half Cent, AU Details

- 34 **1794—Improperly Cleaned—NCS. AU Details.** C-1a, B-1a, R.3. Manley State 2.0. This earlier die state has faint clash marks on each side but does not exhibit the usual heavy clash marks of the latest and most plentiful die state. The reverse is rotated 90 degrees clockwise, or to about 3 o'clock in relation to the obverse. Boldly detailed with excellent eye appeal, although it has been cleaned and recolored, now with dark steel and some lighter maroon. Both sides have numerous scattered surface marks, with an obverse rim bruise at 3 o'clock and a line of planchet lamination on the reverse. EAC 35. Ex: *Numismatics International* (6/1986). (#1003)

**Off-Center 1795 'Punctuated Date'
Plain Edge Half Cent, C-4, VF Details**

- 35 **1795 Plain Edge, Punctuated Date—Damaged—NCS. VF Details. Struck 10% Off-Center.** C-4, B-4, R.3. Manley Die State 2.0. The right obverse field has die bulges, and HALF CENT is weak but sharper than on many. Struck 10% off-center at 9 o'clock, just far enough to call this a mint error rather than a poorly centered strike.
- The surfaces, especially on the obverse, have several small digs or scrapes that warrant the NCS Damaged designation, although this piece is clearly far finer than the collector's usual visualization of a damaged coin. The surfaces are attractive with desirable medium brown color, and there are no traces of corrosion or other imperfections. EAC 10.
- Ex: *Bowers and Ruddy* (1/1981), lot 1170 as "VF-20 or so." (#1012)

**Bold 1795 C-6a No Pole Half Cent, AU Details
With Talbot, Allum & Lee Undertype**

- 36 **1795 Plain Edge—Improperly Cleaned—NCS. AU Details.** C-6a, B-6a, R.2. Thin planchet, 82.7 gn. Manley Die State 2.0. There is slight evidence of the usually seen obverse die bulge right of Y. Minor die rust is also visible. Traces of the Talbot, Allum & Lee undertype are visible at the upper right reverse, around OF.
- Deep greenish-brown surfaces have lighter reddish-tan patina outlining the devices on this pleasing, sharply detailed example. The strike is bold and well centered, with especially strong detail on the obverse. A few faint scratches and scattered surface marks are scarcely a concern. EAC 40.
- Ex: *Numismatics International* (6/1986). (#1018)

Splendid 1802 C-2 Half Cent, VF Details

- 37 **1802/0 Reverse of 1802—Improperly Cleaned—NCS. VF Details.** C-2, B-2, R.3. Manley Die State 2.0. From an early die state before the obverse was resurfaced, with the hair curl left of 1 still complete and closed. HALF CENT is sharp. The key date among Draped Bust half cents, all 1802s are actually overdates. Typically examples are poorly defined at the center reverse, and almost always dark and corroded. This piece actually has better-than-average surfaces with minor roughness. It has been cleaned and retoned, expertly so. EAC 12.
- Ex: *Lanny Reinhardt* (4/1991) at the 1991 EAC Convention. (#1057)
- 38 **1803 VF35 NGC.** C-4, B-4, R.3. The usual die state, with clash marks inside the wreath. This lovely piece has smooth dark brown surfaces and reddish-tan color outlining the obverse devices. A few scattered abrasions are consistent with the grade. EAC 25.
- Ex: *Collector's Cabinet* (Jack Borckardt, 1/1988); *Gino Sanfilippo* (4/1994); *Ed Kucia* (8/1996). (#1060)

- 39 **1803—Improperly Cleaned—NCS. XF Details.** C-4, B-4, R.3. The usual die state, with light reverse clash marks. The reverse is rotated about 190 degrees, to near-medallic alignment. At one time considered a formidable rarity, quite a number of 1803 C-4 half cents have been found in recent years, but mostly in low grades. Only about eight pieces are known in grades better than VF. An attractively retoned example with deep greenish-brown surfaces and traces of lighter tan, mostly on the reverse. EAC 30.
Ex: Robert L. Hughes (8/1976); Frank Wilkinson (11/1978). (#1060)

Elusive 1803 C-3 Half Cent, AU53

- 40 **1803 AU53 NGC.** C-3, B-3, R.1. Manley Die State 3.0. Breen Die State irrelevant. This piece has heavy die file lines at the top of the obverse, especially down from the right side of B. It also has a prominent bulge at the 18 of the date. Breen claimed in his die states that the die was lapped, removing the file lines *before* the bulge developed at the 18. This example clearly shows that Breen was incorrect.

A splendid 1803 half cent, infrequently seen so fine, with a trace of rub on the high points of the design but showing smooth, silky satin luster. Medium brown and pale blue-green serve as a backdrop for the lovely tan, faded from original red. EAC 50.

Ex: Larry Briggs at the 1991 ANA Convention. (#1060)

**Double-Struck 1804 C-13 Half Cent
Sharpness of AU**

- 41 **1804 Plain 4, No Stems, Double Struck—Obverse Scratched—NCS. AU Details.** C-13, B-10, R.1. Manley Die State 3.0. A trace of the reverse rim break over MER is visible. The obverse is boldly double-struck, with two eyes, two throats, and other doubled details. The reverse is normal. Pieces with one side doubled and the other normal are created when two planchets are fed into the press and struck, creating two uniface coins. Each one-sided coin is then placed back in the press for another cycle, creating a single impression on the blank side and a double impression on the opposing side. This piece has two short but deep scratches on the obverse at 9 o'clock. Otherwise the surfaces are excellent, and the greenish-tan color is remarkable. EAC 25.
Ex: Michigan State Numismatic Society Convention (11/1999) (#1063)

Desirable 1804 C-13 Half Cent, MS64 Brown

- 42 **1804 Plain 4, No Stems MS64 Brown NGC.** C-13, B-10, R.1. Deep lilac-brown surfaces support full cartwheel luster on this sharply defined Choice Mint State example. The Plain 4, No Stems variety is an important *Guide Book* variety in constant demand. EAC 60. Census: 8 in 64 Brown, 1 finer (6/09). (#1063)

- 43 **1804 Crosslet 4, Stems MS61 Brown NGC.** C-10, B-9, R.1. Manley Die State 3.0, the usual die state for the variety. Both sides have flowlined surfaces, the reverse with an additional bulge. Lapped dies now have no visible dentilation on either side. A few minor lines and marks are visible on otherwise pleasing light to medium brown surfaces with frosty cartwheel luster. EAC 55.
Ex: Anthony Denny (11/1999). (#1069)

**Splendid 1804 Crosslet 4, Stems
C-10 Half Cent, MS63 Brown**

- 44 **1804 Crosslet 4, Stems MS63 Brown NGC.** C-10, B-9, R.1. Manley Die State 2.0. A scarce earlier die state with nearly full dentilation on the obverse and partial dentilation on the reverse. Both sides have crisp and bold design definition, sharper than normally seen for the die combination. Lovely olive surfaces with splashes of iridescent toning on the obverse over frosty, unbroken cartwheel luster. A few trivial surface marks prevent a higher certified grade. EAC 60.
Ex: Tom Reynolds (11/1996). (#1069)

Census Level 1804 C-5 Half Cent, AU50

- 45 **1804 Spiked Chin AU50 PCGS.** C-5, B-4a, R.4. Manley State 5.0, the usual die state for the variety. This lovely example is clearly a Condition Census survivor. Only two Mint State and two AU coins are currently identified. Following those are six XF pieces and a handful of VF coins. The majority of survivors are no better than Fine. Although a few trivial marks and minor lines are visible on both sides, the light tan and medium brown surfaces enhance its eye appeal. EAC 45.
Ex: *Delaware Valley Rare Coins*. (#1075)

- 46 **1804 Spiked Chin AU50 PCGS.** C-6, B-6, R.2. Breen Die State XIV, Manley Die State 11.0, Braig Die State 8.0. Rim breaks cover about 50% of the reverse and are complete over MERICA. A single dentil is visible over the space between F and A, with another small triangular rim break extending half the distance from the A to the F. Toward the bottom 4-1/2 dentils are visible before another rim break that extends to the I in UNITED.

Splendid olive surfaces exhibit splashes of steel and iridescent toning. The surfaces have many tiny abrasions but none of any consequence. An attractive and desirable late die state. EAC 40.
Ex: *J.J. Teaparty* (9/1992). (#1075)

1804 C-6 Spiked Chin Half Cent, AU55
Early Die State

- 47 **1804 Spiked Chin AU55 PCGS.** C-6, B-6, R.2. Cohen-6 is the popular Spiked Chin variety, with numerous reverse rim breaks and countless die states. The present specimen is an early die state, about equal to Breen's Die State IV, Manley Die State 2.2, and Braig Die State 1.5. The reverse has extensive die cracks, with the area above the U somewhat mushy but displaying no actual rim breaks.

Although a few minor surface marks are evident on each side, this remarkable Spiked Chin has bold design details. The surfaces have intermingled tan and medium brown, with a few splashes of darker coffee-brown toning. Cartwheel luster is visible on each side, with the reverse satiny and slightly reflective. EAC 50.
Ex: *Jim McGuigan* (3/1992). (#1075)

- 48 **1805 Small 5, Stems—Corroded—NCS.** VG Details. C-3, B-3, R.4. Manley Die State 2.0, the usual state for this variety with a prominent die bulge in the right obverse field. A number of low grade pieces have been found during the last several years, reducing the rating from R.5 to R.4. This variety remains highly desirable, regardless of its overall condition.

This piece has minor corrosion on each side, with some additional verdigris on the reverse. The surfaces are steel-brown, and the overall appearance is certainly acceptable. EAC 6.
Ex: *Bowers and Ruddy* (9/1975). (#1087)

Perfect Dies 1806 C-2 Half Cent, AU Details
Small 6, Stems, Extremely Rare Die State

- 49 **1806 Small 6, Stems—Environmental Damage—NCS.** AU Details. C-2, B-1, R.4. Manley Die State 1.0. Struck from perfect dies and considered extremely rare. This piece is from a 1986 Superior sale and carried no grade in their catalog. The obverse has a few small carbon deposits, with splashes of steel toning on the reverse, over beautiful light tan surfaces. Both sides display considerable cartwheel luster. Probably among the top 10 examples of the variety known today. EAC 40.
Ex: *Superior* (9/1986), lot 3023; *Jim O'Donnell* (11/1986) (#1096)

- 50 **1807 AU55 NGC.** C-1, B-1, R.1. Manley Die State 3.0, the usual late die state of 1807 half cents, with border dentilation absent and showing heavy peripheral flowlines. What sets this piece apart from many of its peers are mostly smooth surfaces, generous portions of cartwheel luster, and lovely medium to dark brown toning. EAC 45.
Ex: *Mark Borckardt* (11/1975). (#1104)

- 51 **1808/7—Improperly Cleaned—NCS.** VF Details. C-2, B-2, R.3. Manley Die State 2.0. The obverse has a crack through the tops of LIBERTY. This intermediate state is rarer than the early and usually seen die state, which only has a faint crack through TY.

The surfaces are dark with minor hairlines, but they are also smooth and glossy. There is no visible evidence that this coin has been cleaned or retoned at any time, regardless of the NCS opinion. In fact, this is a desirable and attractive example of the 1808/7 overdate. EAC 12.

Ex: *MI Coin & Stamp* (11/1975 at the Michigan State Numismatic Society Convention). (#1110)

- 52 **1808—Improperly Cleaned—NCS.** AU Details. C-3, B-3, R.1. Manley Die State 3.0, with rust streaks visible in the left and right obverse fields. Partial dentilation is still visible on each side. The reverse is rotated about 190 degrees, just past medallion alignment. Both sides have emerald-brown surfaces with splashes of darker steel toning. This piece has been expertly cleaned and retoned and is quite desirable. At one time, it was PCGS-certified AU50. EAC 40.
Ex: *J.J. Teaparty* (10/1989). (#1107)

Important 1809 C-1 Half Cent, Fine 12

- 53 **1809—Improperly Cleaned—NCS. Fine Details.** C-1, B-2, R.5. Breen Die State II. Manley State 2.0. The reverse has a crack through the tops of MERICA. Engraving guide lines are visible between several words in the legend. Richard Picker discovered this variety in 1954, and slightly more than a dozen were known when Walter Breen's *Half Cent Encyclopedia* was published in 1983. Many more have been discovered since that time and today about 50 pieces are known, mostly in low grades. This piece still ranks among the 10 to 12 finest examples.

The NCS Improperly Cleaned designation is incorrect, in this cataloger's opinion. The pleasing two-toned surfaces display light steel-brown devices with deeper brown fields. Both sides have a few faint lines and scratches that are consistent with the grade. EAC 12.

Ex: Jim McGuigan (1/1980). (#1123)

Popular 1811 C-1 'Four-Star Break' Half Cent, R.5, EAC Fine 12

- 54 **1811—Improperly Cleaned—NCS. VG Details.** C-1, B-1, R.5. Breen Die State V. Manley State 5.0. The rare and popular "Four-Star Break" die state is seldom seen in any grade, with a total population estimated at less than 50 coins. This piece is from a 1981 Stack's sale where it was succinctly described: "1811 G.2. With the massive rim break at the first 3 stars. Fine."

Here is another half cent in the present offering that NCS has unjustly ridiculed, calling it Improperly Cleaned. Further, the existing details are closer to VF than VG. The smooth chocolate and medium brown surfaces are delightful, especially for an 1811. While a few fine obverse scratches and other minor imperfections are visible on each side, they are mostly hidden in the devices. EAC 12.

Ex: Stack's (6/1981), lot 115. (#1135)

- 55 **1828 13 Stars MS64 Red and Brown NGC.** C-3, B-2, R.1. Manley Die State 3.0. A scarce intermediate die state with repunching visible on star 7, a long spine below the upper left berry inside the wreath, and light clash marks on each side. This gorgeous piece has considerable original orange mint luster with blue-brown toning on both sides. Cartwheel luster accompanies satiny surfaces. EAC 63. Ex: Harry Jones (9/1996). (#1148)

- 56 **1853 MS65 Red and Brown PCGS. CAC.** C-1, B-1, R.1. Considerable original orange luster is especially prominent on the reverse of this attractive medium brown half cent. The date is seldom encountered with any amount of red mint color. Housed in a green label holder. EAC 63. Population: 5 in 65 Red and Brown, 0 finer (5/09). (#1228)

- 57 **1855 MS63 Red PCGS. CAC.** C-1, B-1, R.1. The only variety known. Attractive brick-red luster covers both sides of this lustrous piece. There are no marks of any consequence, although a few small spots are noted, such as on the upper neck. Encapsulated in a first generation PCGS holder. EAC 63. (#1235)
-

Fiery 1855 C-1 Half Cent, MS65 Red

- 58 **1855 MS65 Red PCGS.** C-1, B-1, R.1. A frosty, fiery orange example of this popular hoard issue, with only a few freckles of carbon on each side and remnants of a fingerprint on the obverse. The strike is well executed through the centers, although there is typical mushiness in the area of the denticles. One of the nicer 1855 half cents we have seen in some time. EAC 64. Population: 24 in 65 Red, 0 finer (6/09). (#1235)
-

PROOF CLASSIC HEAD HALF CENT

Stellar 1831 Original Half Cent, PR60 Brown

59 **1831 Original. PR60 Brown PCGS. C-1, B-1, R.6.** No die states are recorded in Walter Breen's *Half Cent Encyclopedia* or in Ronald Manley's *The Half Cent Die State Book*.

The present piece from the Norweb Collection was graded AU55, prooflike, in that catalog. Walter Breen listed the coin as first in his Condition Census of business strikes, the only AU example known. The surfaces show a few light lines that appear to be the result of harmless camel-hair brushing in conjunction with a coin preservative. This piece is boldly detailed with satiny medium brown and emerald surfaces, along with iridescent overtones. A darker area at 10 o'clock on the obverse extends to the edge. In 1987, Bowers and Merena described this piece in the Norweb catalog as: "AU-55, prooflike. Earlier considered by some observers, including Mrs. Norweb, to be a Proof, and inventoried as such in the Norweb Collection. This is the piece which Walter Breen in his Condition Census designates as the finest known business strike original 1831 half cent."

Today, many believe that all 1831 half cents were struck as proofs. Mint records indicate a production of 2,200 half cents in 1831, suggesting that some may have been coined as business strikes. Historically, the 1831 half cents have been called a proof-only issue. In 1971 Roger S. Cohen, Jr., wrote: "For many years coin catalogues had the erroneous notation 'Proof only' for this date, and some continue to perpetuate this error. Walter Breen was the first person to my knowledge to point out that both business strikes and proofs were struck from these dies."

The jury is still out regarding the true status of these coins. Manley, Rick Coleman, and Frank Wilkinson each submitted articles to *Penny-Wise* in the late 1990s, debating the status of business strike versus proof 1831 half cents. Ebenezer Gilbert, Manley, and Coleman consider all 1831 half cents to be proof-only issues. Meanwhile, Breen, Cohen, and Wilkinson all support the existence of business strikes. Interested collectors should review those articles. In 1998 Manley wrote: "I am unconvinced that any 1831 Originals were intentionally struck as business strikes. Although this variety has historically been considered a proof-only issue, its current status as such is controversial." EAC 60.

Ex: Thomas Elder (privately, 10/17/1908); Albert Fairchild Holden; Emery May Holden Norweb; Norweb Collection (Bowers and Merena, 10/1987), lot 78. (#1186)

PROOF BRAIDED HAIR HALF CENTS

Elusive 1850 C-1 Half Cent, R.6, PR63 Brown

- 60 **1850 PR63 Brown PCGS.** C-1, B-1, R.6 as a proof. Also attributed as Cohen PO-12 from his second edition half cent reference, with only about 15 to 20 proofs known to survive. Breen stated about a dozen proofs had been seen or reported in the early 1980s, and the number is slightly larger today. We have records of 12 different certified proofs and 10 other uncertified proofs, some of which may be mere prooflike business strikes.

Some reflectivity is visible on each side beneath the yellowish-green and deeper steel toning on the obverse. A few dots or splashes of light orange can be seen on the obverse as well. The reverse has evenly distributed blue-green with traces of light orange inside many letters. The obverse has a small mark on Liberty's cheek and a few others in the fields. EAC 55.

Ex: Lester Merkin (2/1972), lot 62; Bowers and Ruddy (11/1976), lot 403; Bowers and Ruddy (6/1977), lot 3136; Auction '85 (Superior, 7/1985), lot 503; Superior (10/1989), lot 3421; Larry Briggs (4/1990). (#1311)

Proof 1852 Restrike Half Cent, B-2

- 61 **1852 First Restrike, Small Berries—Environmental Damage—NCS. Proof.** B-2, R.5. The reverse has small berries with ENT of CENT doubled. The most frequently seen variety of the proof-only date, with at least 60 to 70 examples known today. Both sides have mottled iridescent toning, ranging from deep green and blue to pale orange, with minor verdigris visible around the devices. EAC PR60.
Ex: Robert McKay (4/1990). (#1317)

LARGE CENTS

Boldly Detailed 1793 Chain Periods Cent, S-4

- 62 **1793 Chain Periods PCGS Genuine.** S-4, B-5, R.4. Deep steel surfaces exhibit moderate corrosion, with bold details still evident on each side. The chain and denomination are exceptionally sharp and prominently visible. Attempting to grade such a coin will undoubtedly generate considerable discussion. EAC 8. (#91341)

**Scarce Fine 15 1793 Chain Cent
Periods Variety, S-4**

- 63 1793 Chain Periods Fine 15 NGC.** S-4, B-5, High R.3. The Chain cent with periods following the date and LIBERTY is a separate *Guide Book* type that is represented by only one variety. As a result, it is in extreme demand from both variety specialists and *Guide Book* type collectors. The Chain cents were the first of the three major design groups struck in 1793, as the Philadelphia Mint began producing our nation's coinage. Five different die varieties of the 1793 Chain cents are known, although one of the five is extremely rare, with only two known specimens.

This piece has deep gray-brown surfaces with moderate granularity, occasional subtle spots, and a couple of minor rim dings, typical for surviving 1793 Chain cents. EAC 8. (#91341)

VF Details S-8 1793 Wreath Cent

- 64 1793 Wreath Cent, Vine and Bars—Corroded—ANACS.** VF Details. S-8, B-13, R.3. The medium to dark brown surfaces are uniformly granular, although all legends are bold and Liberty's major details are apparent. Each side has subtle rim bumps, more evident on the lower obverse. EAC 5.
Ex: FUN Signature (Heritage, 1/2006), lot 544. (#1347)

**Choice XF S-8 Vine and Bars
1793 Wreath Cent**

- 65 1793 Wreath Cent, Vine and Bars XF45 PCGS.** S-8, B-13, R.3. The diagonal die crack across the central reverse is diagnostic. A deep-brown Choice XF cent with unmarked surfaces and impressive design detail. Thorough inspection locates a small reverse rim nick at 9 o'clock. Per Breen, the Wreath cent was only struck between April and July 1793. Advanced collectors covet corrosion-free examples of this first-year type coin. EAC 30.
Ex: Lexington Collection (Bowers and Merena, 1/1994), lot 1032. (#1347)

- 66 1795 Plain Edge—Corroded—NCS.** XF Details. S-76b, B-4b, R.1. Sharply detailed, with heavily corroded surfaces. Suitable as a filler for the type collector on a budget. EAC 8.(#1380)

- 67 1797 Reverse of 1797, Stems—Improperly Cleaned—NCS.** AU Details. S-130, B-25, R.2. A large die break is seen at 10 o'clock on the obverse rim. The left bow ribbon and several wreath leaves are partially effaced through overzealous die polishing. The remaining details are admirable, even if the surfaces are a trifle bright from improper cleaning. Rich chocolate-brown coloration uniformly covers each side. EAC 35.(#1422)

**Borderline Uncirculated 1798 Cent
Second Hair Style, S-166**

- 68 **1798 Second Hair Style AU58 PCGS.** S-166, B-32, R.1. The heavy reverse die crack from the E in UNITED to the fraction provides rapid variety identification. Luster shimmers across the smooth medium-brown surfaces of this handsome Draped Bust cent. The die alignment causes minor softness on the bust tip and on the reverse near 2 o'clock. EAC 45. Population: 8 in 58, 0 finer (5/09). (#1434)

Collectible 1799 Cent, S-189, AG3

- 69 **1799 AG3 PCGS.** S-189, B-3, R.2. Misattributed as a 1799/8 by PCGS. Medium brown fields highlight the slightly lighter-brown motifs. The 99 of the date and the outline of Liberty's portrait show, as do portions of the wreath and ONE CENT. Light granularity on the obverse is visible under magnification, and the portrait has a trio of faint pinscratches. A collectible key-date specimen. EAC 3. (#1443)

Lovely Near-Mint 1801 Cent, S-216

- 70 **1801 AU58 NGC.** CAC. S-216, B-6, R.1. Blunt first 1 in date. A chocolate-brown Borderline Uncirculated cent with substantial shimmering luster. The reverse is essentially unabraded, and the obverse has only trivial contact. The dies are slightly misaligned, such that OF and the bust tip opposite are softly impressed. EAC 50. Census: 4 in 58, 8 finer (6/09). (#1458)

- 71 **1802 AU50 PCGS.** S-232, B-12, R.1. Breen Die State II, with dentils clashed near AMERICA and a rim die break beneath the 18 in the date. A blundered obverse die with the T in LIBERTY over an errant Y, also seen on S-233. A smooth medium brown cent that has noticeable luster. An obverse edge nick appears at 6 o'clock, and the centers have a few shallow flaws. EAC 35. Population: 23 in 50, 37 finer (5/09). (#1470)

- 72 **1802 No Stems XF40 NGC.** S-241, B-20, R.1. Easily attributed by the diagnostic extra S below the final S and the double fraction bar. Reasonably well defined with rich chocolate-brown color. There are a couple of ancient scratches below the bust that hardly detract. EAC 25. (#1476)

- 73 **1803 Small Date, Large Fraction XF45 NGC.** S-258, B-17, R.1. An uncommonly appealing Choice XF representative of this relatively available variety. Mocha and golden-brown surfaces show light wear that appears mostly at the high points. EAC 35. (#1485)

**Exceptional MS66 Brown
'Restrike' 1804 Half Cent**

- 74 **1804 Restrike MS66 Brown PCGS.** CAC. An out-of-mint issue, struck circa 1860 from muled and altered-date Mint dies that had been sold as steel scrap. The rarity of the official 1804 cent, known from a single die pair, created demand that was partly met by this contemporaneously condemned private restrike. Struck from broken and heavily rusted dies. Evenly toned golden-brown, but otherwise essentially as made. EAC 60. Population: 7 in 66 Brown, 0 finer (6/09). (#45344)

- 75 **1807/6 Large 7—Environmental Damage—NCS.** AU Details. S-273, B-3, R.1. Medium-brown color overall with blue and violet overtones. The peripheries show patches of environmental damage, though the centers are largely free of such troubles. EAC 20. (#1528)

**S-295 Plain 4 1814 Cent XF40
Double Struck in Collar**

- 76 **1814 Plain 4—Obverse Double Struck in Collar—XF40 PCGS.** S-295, B-2, R.1. This final year Sheldon large cent was struck twice while in its collar. The reverse (anvil die) remained stationary between strikes, while the obverse (hammer die) rotated a few degrees clockwise between blows. Generally deep brown, although the reverse has areas of lighter tan toning. EAC 20. (#1576)

- 77 **1818 MS63 Red NGC.** N-10, R.1. The normally seen Randall Hoard variety of the year, and in this case with nearly full orange mint luster. Both sides have slight mellowing, along with splashes of dark brown toning. EAC 63.(#1602)
- 78 **1820 Large Date MS65 Red and Brown PCGS.** N-13, R.1. The familiar Randall Hoard variety with bold peripheral obverse die cracks. Brick-red and steel-blue each occupy approximately 50% of the shimmering surfaces. A nearly unabraded Gem, encapsulated in a green label holder. EAC 63.(#1616)
- 79 **1834 Small 8, Large Stars, Medium Letters MS64 Brown PCGS.** N-2, R.1. Noyes Die State B. A beautiful near-Gem with chocolate-brown toning aside from an occasional wisp of carbon. The portrait and wreath are boldly brought up, and there are no remotely consequential marks. The profile is minutely doubled from the chin to the upper lip. EAC 60. Population: 6 in 64 Brown, 2 finer (5/09).(#1708)

**Distinctive Undated Braided Hair Large Cent
Struck on Half Cent Planchet, Fine Details**

- 80 **Undated Braided Hair Large Cent—Struck on a Half Cent Planchet, Scratches—NCS. Fine Details.** 4.69 gm. All of STATES on the reverse, as well as parts of UNITED and OF on that side and most of the date on the obverse, are off the flan. Luminous chocolate-brown surfaces show a number of long scratches through the fields, and each side exhibits significant wear. Still, a highly desirable example of an early wrong-planchet error. EAC 8.
- 81 **1851 MS66 Brown NGC.** N-7, R.1. Copper-gold iridescence is especially evident on the reverse, despite the Brown designation. Fully struck, and immaculate aside from a tiny contact mark on Liberty's jaw. EAC 63.
Ex: Long Beach Signature (Heritage, 2/2002), lot 5093; Charlotte ANA Signature (Heritage, 3/2003), lot 5082; Baltimore Bullet (Heritage, 8/2003), lot 75.(#1892)
- 82 **1853 MS66 Red and Brown NGC.** N-24, R.2. Incorrectly attributed as N-2 by NGC. This intricately struck Premium Gem features generous portions of fire-red, although the open fields as well as Liberty's cheek and neck are toned olive-brown. EAC 63.
Ex: Dallas Signature (Heritage, 11/2005), lot 136.(#1902)

Gorgeous Red Gem 1853 Cent, N-10

- 83 **1853 MS65 Red NGC.** N-10, R.1. A gorgeous brick-red Gem, well struck on the major devices while some of the stars are typically incomplete. Recutting is noted on the date, particularly the upper loop of the 8. Nearly unabraded, and only inconsequential carbon is present. Shallow strike-throughs, as made and usual for the type, are on the neck and near the T in CENT. EAC 64. Census: 3 in 65 Red, 0 finer (5/09). (#1903)

Red Gem 1853 Cent, N-13

- 84 **1853 MS65 Red PCGS.** N-13, R.1. This brick-red Gem exhibits satin luster and appears bereft of contact. Thorough evaluation locates a minute spot on the reverse rim near 5 o'clock and only microscopic obverse carbon. A desirable antebellum type coin. EAC 65. Population: 58 in 65 Red, 14 finer (5/09). (#1903)

FLYING EAGLE CENTS

- 85 **1857 MS64 PCGS.** CAC. Pastel beige-tan lustrous surfaces are nicely preserved. The design elements are well struck except for weakness on the tail and corresponding upper right reverse wreath. A nice-looking piece overall, as appropriately recognized by the CAC green label.(#2016)
- 86 **1858 Large Letters MS64 PCGS.** High Leaves reverse, Closed E in ONE. A sharply struck Choice type coin with satin luster and a couple of faint thin marks on the lower left obverse. Toned in olive and autumn-gold shades. Encapsulated in a green label holder. (#2019)

PROOF FLYING EAGLE CENTS

Classic 1856 Flying Eagle Cent PR45

- 87 **1856 PR45 ICG.** Snow-3, associated with business strikes although ICG has designated this example as a proof. The plumage and wreath show moderate wear, but there are no relevant marks, and the golden-brown surfaces are problem-free. The Snow-3 pairing constituted most pieces coined in 1856 for distribution to lawmakers. The Snow-9 variety, the most plentiful for the date, was struck a couple of years later for sale to collectors. (#2037)

Pleasing 1856 Flying Eagle Cent, PR58

- 88 **1856 PR58 PCGS.** Snow-9. The die combination, as identified by Richard Snow, is a proof-only variety. The obverse has a short die line from the right top of I in UNITED to the border, and the reverse has a bold center dot below the upper left serif of N in CENT. This impaired proof has slight high point wear on each side. The surfaces are light tan with hints of darker rose toning, joined by whispers of blue-green on the obverse. Both sides, especially the reverse, exhibit fine hairlines. Still a pleasing 1856 Flying Eagle cent with strong design elements. (#2037)

Attractive PR64 1856 Flying Eagle Cent

- 89 **1856 PR64 PCGS.** Snow-9. Snow's Obverse 5, with die line through the eagle's wing, paired with Reverse D, which shows a die gouge within the left ribbon end. The Snow-9 is frequently encountered, making it ideal for the collector who wants to obtain a specimen as an addition to an otherwise "vanilla" set of Flying Eagle cents. This example has luminous olive and gold color with a degree of rose-orange at the central reverse. A dot of deeper color at the E of UNITED is mirrored in a thin line around much of the reverse. The obverse is well-preserved, though close examination turns up a contact mark to the left of ONE on the reverse that accounts for the grade. (#2037)

Impressive Gem Proof 1856 Flying Eagle Cent

- 90 **1856 PR65 NGC.** Ex: Jules Reiver Collection. Snow-3. This lovely Gem has the recut 5 in the date associated with Snow's Obverse 1, but the die scratch beneath the right ribbon end is not evident. However, it is not either of the other known die pairings for Obverse 1 (Snow-1, tilted ONE CENT; and Snow-10, Low Leaves) and repunching on the E in CENT is present on its upper right edge. Snow-3 is the second most-common die marriage of 1856 Flying Eagle cents. But it carries a premium over Snow-9 because it is scarcer and because Snow-9 is considered a proof-only variety, while most examples of Snow-3 are considered business strikes by specialists. The bold strike, the absence of strike doubling, and the moderately reflective fields suggest that the present piece is a proof example of Snow-3, rather than a business strike. This intricately struck Gem's fields display light honey-gold color, while the luminous devices are tan in hue. The fields are lightly mirrored, and are void of contact. A faint and fully retained lamination, as made, is near 1 o'clock, visible in gray. (#2037)

Lovely, Elusive Small Letters Snow-PR3 1858 Flying Eagle Cent, PR64

- 91 **1858 Small Letters PR64 PCGS. CAC.** Low Leaves, Open E in ONE. Snow-PR3 with broken U in UNITED. As Rick Snow enthuses in his *A Guide Book of Flying Eagle and Indian Head Cents*: "Proof Flying Eagle cents are some of the most attractive coins in numismatics!" They are also some of the most elusive, as there are actually many more proof 1856 pattern Flying Eagle cents than there are proof 1858 Small Letters pieces, which have an estimated original mintage of only 200 pieces, per Snow. This near-Gem offers sharp devices and associated squared rims, and the pleasing surfaces are light chocolate-brown with occasional hints of olive. PCGS has graded just seven finer specimens (6/09). (#2043)

INDIAN CENTS

- 92 **1859 MS65 NGC.** The golden-tan surfaces of this Gem display pleasing luster and well struck design elements. A few minute ticks and flecks occur over each side. Census: 2 in 65, 0 finer (5/09). (#2052)
- 93 **1860 MS66 NGC.** Tan and mushroom-brown surfaces offer strong, pleasing luster. The tips of the first four feathers are weak, but the remaining elements are sharp. A few minor flecks are undisturbing. Overall, a highly desirable representative of this first Oak Wreath Reverse Indian cent. Census: 3 in 66, 0 finer (5/09). (#2058)
- 94 **1864 Copper-Nickel MS65 NGC.** An impressive mix of gold, tan, and emerald graces the obverse and reverse surfaces of this lovely Gem. Both sides have satiny luster with adequate design features for the grade. (#2070)

Superb Gem Brown 1864 L on Ribbon Cent

- 95 **1864 L On Ribbon MS67 Brown NGC.** The 1864-L was not saved in large numbers and, consequently, is seldom found in high grades, most likely because the addition of Longacre's initial was not readily discernible to the general public. This piece, however, is a splendid example with undisturbed, glossy surfaces. Unlike many of the high grade survivors known, this piece displays full detail. Iridescent shades of ruby-red and ocean-blue appear in the fields. Strong clash marks are noted on the obverse, but little evidence of clashing is noted on the reverse. This is the only Superb Gem of this issue graded by either NGC or PCGS in any color category (5/09). (#2079)

96 **1869 MS64 Red PCGS.** Snow-4. The 69 in the date is lightly repunched north. The lower mintage 1869 cent is scarce in all grades. This fully red near-Gem specimen displays bright golden luster laced with traces of rose. Well struck and unabraded. A few tiny light carbon flecks limit the numerical grade. Population: 42 in 64 Red, 35 finer (5/09). (#2096)

97 **1870 MS65 Red and Brown PCGS.** Light brown patina drapes the devices, which contrast nicely against the rose-red fields. The strike is strong throughout, and a loupe locates only minor handling marks. Several die cracks are noted on the reverse. Population: 48 in 65 Red and Brown, 4 finer (5/09). (#2098)

98 **1872 MS65 Brown PCGS.** Bold N in ONE. Like the typical Uncirculated survivor, this piece displays soft details on the date and shield. The other design elements are sharp, including the upper feather tips of Liberty's headdress. The faces show variegated greenish-brown and gold patina. The low mintage, just above 4 million pieces, was further reduced by widespread melting following the Mint Act of 1873. Today the issue is extremely scarce at the Gem level; PCGS reports only four examples in MS65 Brown (5/09). (#2103)

Famous Doubled LIBERTY Snow-1 1873 Cent, Closed 3, VF35

99 **1873 Doubled LIBERTY, Closed 3 VF35 PCGS.** Snow-1. FS-101, formerly FS-009. LIBERTY is widely die doubled, as are her eye and lips. This olive-brown Choice VF example has only minor marks from its limited stint in 19th century commerce. The 1873 Snow-1 is a popular *Guide Book* variety that is second in importance to only the rare 1888/7 overdate. (#2115)

Red Gem Doubled Date 1894 Cent, FS-301

100 **1894 Doubled Date MS65 Red PCGS.** FS-301, formerly FS-011, Snow-1. The date is widely repunched northeast. There are hundreds of repunched dates within the Indian cent series, but the present *Guide Book* variety is undoubtedly the most dramatic. This is a beautiful green-gold Gem with glimpses of orange-red near the margins. Nicely struck and nearly unabraded, with a couple of tiny mint-made strike-throughs on the left obverse field. Population: 11 in 65 Red, 0 finer (5/09). (#92189)

101 **1909-S MS64 Red PCGS.** A remarkable and fully brilliant near-Gem 1909-S Indian cent, the key to the 20th century subset of this design. Light orange surfaces are slightly mellowed, and the feather tips are a trifle soft, but the overall appearance is exceptional. (#2240)

PROOF INDIAN CENTS

Splendid 1860 Indian Cent, PR65

102 **1860 PR65 PCGS.** The Rounded Bust variety, as are all proof 1860 Indian cents. This splendid Gem has gorgeous tan and gold surfaces with fully reflective fields and exceptional eye appeal. The design elements on each side are bold. Only a few tiny carbon specks prevent an even higher grade. Population: 33 in 65, 7 finer (5/09). (#2253)

Exquisite PR67 1860 Indian Cent

103 **1860 PR67 NGC.** Tan-gold obverse patina yields to reddish-gold on the reverse of this Superb Gem proof. An exacting strike leaves bold delineation on the design elements, except for minor softness on the feather tips. The surfaces are free of individually mentionable flaws. Census: 1 in 67, 1 finer (6/09). (#2253)

Gorgeous 1864 Copper-Nickel Cent PR67 ★ Cameo

104 **1864 Copper-Nickel PR67 ★ Cameo NGC.** In 1864, most proof sets included the copper-nickel cent, as they were the first coins made that year. Only a few additional sets and singles sold in the middle months had bronze proofs, and those sold at the end of the year included proofs with the designer's initial, L. Copper-nickel Indian cents with strong contrast are few and far between, especially in Superb Gem quality. This amazing piece has frosty light tan devices with deeply mirrored fields. Both sides have rose and gold accents that become more vibrant near the border. (#82265)

Elusive 1864 Bronze No L Cent, PR64 Red

- 105 1864 Bronze No L PR64 Red PCGS.** The estimated mintage for the 1864 Bronze No L cents is only 150 coins, and today most of the certified examples are in the Brown or Red and Brown categories. This Red near-Gem offers alluring surfaces with sunset-orange coloration and lots of eye appeal. A few flecks on the reverse are undistracting testaments to its originality. Population: 14 in 64 Red, 11 finer (5/09). (#2278)

Exquisite Bronze 1864 Cent, PR65 Red

- 106 1864 Bronze No L PR65 Red NGC.** Each side shows a number of vertical die striations, and several circular die striations are noted on the portrait, with a planchet flake below the E of LIBERTY. Post-striking flaws, however, are few, and the bright copper-gold surfaces are immensely appealing. A great example of this challenging transitional issue. Census: 2 in 65 Red, 0 finer (6/09). (#2278)
- 107 1866 PR65 Red Cameo PCGS.** Bright golden-red is seen over each side of this deeply reflective proof, and there is an area of deeper crimson-red at the center of the obverse. Devices are pleasingly frosted, a bonus that provides a strong cameo contrast over the splendidly preserved, glassy surfaces. A few minute lint marks and a couple of planchet flakes are noted in the right (facing) obverse field. Population: 7 in 65 Red Cameo, 3 finer (5/09). (#82287)

Scarce PR66 Red 1867 Indian Cent

- 108 1867 PR66 Red NGC.** The obverse die of the 1867 proof cent was apparently accidentally scratched on the neck of the Indian, and shows as a shallow die line on all proofs from this year. As with all proof cents from the 1860s, this is a rare date with unturned surfaces. The sparkling, deeply reflective fields flash strongly through the even red luster seen over each side. A lovely, high grade example of this scarce, early bronze proof Indian cent issue. (#2290)

- 109 1870 PR66 Red and Brown NGC.** The striking definition is virtually faultless on each side of this Premium Gem proof specimen. Only the hair detail directly adjacent to Liberty's ear shows minor weakness. Rich red-brown and steel-blue coloration adorns well preserved surfaces that are free of contact marks or hairlines. Census: 11 in 66 Red and Brown, 0 finer (6/09). (#2298)

1870 Indian Cent, PR66 Red Tied for Highest Graded

- 110 1870 PR66 Red NGC.** While issues such as the 1870, 1871, and 1872 cents have higher reported mintages than their peers from the years immediately following the Civil War, paradoxically, the later coins are more elusive today. This Red Premium Gem, tied for numerically finest in the color category for its issue (5/09), is attractively detailed with fresh copper-orange surfaces. (#2299)
- 111 1870 PR64 Red Cameo NGC.** The design elements are crisply struck, with intense reflectivity noted in the fields and mild mint frost on the devices. A lovely cameo effect is created on both sides. Well preserved from harmful contact, with scattered carbon specks that prevent an even higher grade assessment. Census: 1 in 64 Red Cameo, 0 finer (5/09). (#82299)

Remarkable 1872 Cent, PR66 Red and Brown

- 112 1872 PR66 Red and Brown PCGS.** A remarkable Premium Gem proof example with nearly full red color on both sides, only beginning to fade to light brown. A few minuscule specks are all that keep this coin out of the Superb Gem category. It is sharply struck, and the fields are fully reflective although not deeply mirrored. Tied for the finest Red and Brown proof example certified by PCGS. Population: 7 in 66 Red and Brown, 0 finer (5/09). (#2304)

Flashy 1873 Closed 3 Cent, PR65 Red

- 113 1873 Closed 3 PR65 Red PCGS. CAC.** This razor-sharp Gem is devoid of contact and provides consistent peach-gold color. The fields are brightly reflective on each side. The die polish that created the bright fields is also responsible for the attenuated feathers at the top of the headdress. Study beneath a loupe locates minuscule carbon. Population: 27 in 65 Red, 3 finer (6/09). (#2308)

- 114 1876 PR66 Red and Brown PCGS.** This is a deeply mirrored and well-preserved proof striking that shows a bit of mottled olive, brown, and darker red coloration over each side. An impressive example from America's Centennial year. (#2316)

Fiery PR66 Red 1876 Cent

- 115 1876 PR66 Red PCGS.** Before 1878, when strikings of multiple thousands of proof cents became the norm, one of the highest-mintage proof issues was 1876, thanks in part to increased sales of proof sets that occurred during the nation's Centennial. This Premium Gem offers remarkable copper-orange color with glimpses of fire-red and lemon. Beautifully detailed devices and shining fields are equally well-preserved. Population: 8 in 66 Red, 0 finer (6/09). (#2317)

- 116 1882 PR66 Red and Brown PCGS. CAC.** Encapsulated in an older green-label PCGS holder, this lovely Indian cent has bold definition and mirrored fields. Both sides have splendid lilac toning over medium brown color. Population: 22 in 66 Red and Brown, 2 finer (5/09). (#2334)

Exquisite 1884 Cent, PR67 Red

- 117 1884 PR67 Red NGC.** Proof Indian cents from the 1880s have higher mintages and show up with greater frequency than dates before or after them. But even if every single proof specimen (3,942 pieces) produced in 1884 survived today, the odds of locating another one as nice as this piece would be extremely low. Both sides exhibit peerless, glassy surfaces with amazing, unmellowed golden-orange color. The design elements are crisply impressed. Census: 4 in 67 Red, 0 finer (6/09). (#2341)

- 118 1885 PR67 Brown PCGS.** Colorful lime-green and rose iridescence adorns both sides of this extraordinary Superb Gem. Save for a few tiny flecks of carbon, the modestly reflective surfaces are essentially as struck. Outstanding overall eye appeal. Population: 8 in 67 Brown, 0 finer (5/09). (#2342)

- 119 1892 PR66 Red PCGS.** Boldly detailed and delightfully fiery, with rich copper-orange surfaces that offer glints of gold and rose. The eye appeal is excellent, and only faint evidence of carbon appears at the obverse margins. A high-end survivor, housed in a green label holder. Population: 12 in 66, 2 finer (6/09). (#2365)

- 120 1898 PR64 Red Cameo PCGS.** Orange-gold surfaces display splashes of light green on the reverse. Sharply struck save for the usual softness in some of the feather tips. Population: 4 in 64 Red Cameo, 7 finer (5/09). (#82383)

- 121 1900 PR64 Red Cameo PCGS.** The sharply struck devices demonstrate undeniable cameo contrast, and the fire-red, gold, sky-blue, and lime colors are pleasing. A few small toning flecks are noted on each side. Population: 2 in 64 Red Cameo, 3 finer (5/09). (#82389)

- 122 1901 PR67 Red and Brown PCGS.** The obverse has nearly full red with just a hint of lilac toning, and the reverse has partial red mint color with lovely deep steel-blue, green, and violet toning. An attractive Superb Gem of exceptional desirability. Population: 7 in 67 Red and Brown, 0 finer (5/09). (#2391)

Singular PR68 Red 1903 Cent

- 123 1903 PR68 Red NGC.** This astonishing Superb Gem specimen is guaranteed to elicit a reaction from even the most jaded collector of the Indian cent series. The pristine surfaces are yellow-green with a tinge of gold at the centers, ceding to areas of flaming cherry-red, sunset-orange, and fuchsia near the rims. All four diamonds on the ribbon are bold, the feather tips are as sharp as ever seen on this design, and all of the vertical and horizontal shield lines are evident. A powerfully appealing survivor, the single finest Red representative graded by either NGC or PCGS (5/09). (#2398)

- 124 1904 PR65 Red Cameo NGC.** Vibrant orange-gold color dominates both sides of this gorgeous Gem, each of which is splashed with cobalt-blue, yellow-green, and purple. A decisive strike imparts strong definition to the design elements. Devoid of mentionable marks or spots. Census: 3 in 65 Red Cameo, 0 finer (5/09). (#82401)
- 125 1907 PR66 Red and Brown PCGS.** Though glimpses of dusky orange and lighter lemon-gold color are present at the margins, blue and violet shadings on each side dominate the eye appeal. Crisply detailed and carefully preserved. (#2409)
- 126 1908 PR66 Red and Brown PCGS.** A decisively struck beauty most notable for its vibrant color, which ranges from lemon-gold to mahogany. Pleasingly preserved and delightful. Population: 10 in 66 Red and Brown, 2 finer (5/09). (#2412)

LINCOLN CENTS

Sharp 1909 VDB DDO Cent FS-1101, MS64 Red

- 127 1909 VDB DDO MS64 Red PCGS. CAC. FS-1101,** formerly FS-012. doubling is evident on RTY of LIBERTY and the first three date digits. Copper-gold luster embraces both sides of this near-Gem doubled die variety. A well executed strike imparts sharp definition to the design elements. A few light flecks preclude Gem classification. (#37633)
- 128 1909-S VDB—Improperly Cleaned—NCS. AU Details.** Each side of this key-date representative displays medium brown patina. Nicely defined, including the date, mintmark, and initials. A few minute obverse marks are visible. A decent piece, despite the NCS disclaimer. (#2426)
- 129 1909-S VDB—Environmental Damage—NCS. AU Details.** This key date specimen displays essentially complete design details, with only trace amounts of friction noted on the high points of Liberty's portrait. Environmental damage is indicated by black specks and muddy brown coloration on each side. (#2426)
- 130 1909-S VDB AU58 NGC.** Pleasing medium and dark brown surfaces exhibit traces of light blue toning on this lustrous near-Mint example. The 1909-S VDB is the most popular and sought-after issue in the 100-year history of the Lincoln cent. *From The Bay State Collection, Part One.* (#2426)
- 131 1909-S VDB MS64 Red and Brown PCGS.** A well-defined piece with warmly lustrous, varied surfaces. Thin lines of pumpkin and copper-orange separate the broad patches of mahogany toning on each side. Modestly marked and appealing, a great representative of this most famous of Lincoln cent keys. (#2427)

Red and Brown Gem 1909-S VDB Cent

- 132 1909-S VDB MS65 Red and Brown PCGS.** This shimmering key date Gem is orange and fire-red with hints of lilac on the vest and obverse field. Essentially bereft of abrasions. The strike is full, even on the important VDB initials, which sometimes come blurry due to their placement near the rim. The initials were removed later in 1909, but reappeared on Lincoln's bust truncation in 1918, after the demise of the allegedly jealous Chief Engraver Charles Barber. (#2427)

1909-S VDB Cent, MS65 Red and Brown

- 133 1909-S VDB MS65 Red and Brown PCGS.** A definite woodgrain appearance characterizes the surfaces of this important key date Gem. Well struck with minimal marks and only a few scattered flyspecks on each side. Variegated lime-green, tan, and rose coloration enhances the eye appeal of this carefully preserved example. (#2427)

Sharp 1909-S VDB Cent, MS66 Red and Brown

- 134 1909-S VDB MS66 Red and Brown NGC.** Some browning is seen on the obverse, but the reverse is primarily cherry-red. Close examination reveals light woodgrain streaking, a common surface characteristic on many cents from 1909. Well struck with no noticeable marks on either side. Glowing surfaces overall and pleasing in all regards. (#2427)

Fantastic MS66 Red 1909-S VDB Cent

- 135 **1909-S VDB MS66 Red NGC.** A gorgeous Premium Gem example of this ever-popular key Lincoln cent issue, well-defined with rich copper-orange surfaces that show occasional olive accents. Smooth and carefully preserved with excellent eye appeal. The 1909-S VDB cent, though it was saved by many at the time of release, is elusive so fine with fully Red surfaces. (#2428)

Attractive 1909 Cent, MS67 Red

- 136 **1909 MS67 Red PCGS.** Despite a mintage that is more than 2-1/2 times greater than its VDB counterpart, this first-year Lincoln is scarcer in Gem and better grades. The present sharply struck orange-gold Superb Gem provides potent luster and undisturbed surfaces. Population: 54 in 67 Red, 0 finer (5/09). (#2431)

Popular Superb Gem Red 1909 Cent

- 137 **1909 MS67 Red PCGS.** The Lincoln cents of 1909 have been on fire recently, with the 200th anniversary of Lincoln's 1809 birth occurring in February and the 2009-dated centennial cents featuring scenes from Lincoln's life fanning the flames. Although no VDB designer's initials are present on this Superb Gem, series aficionados know that in MS67 Red this issue is actually much more elusive. This piece offers splendid appeal with an almond-gold obverse and fiery orange-red reverse. The mattelike surfaces are virtually flawless and spot-free. Population: 54 in 67 Red, 0 finer (5/09). (#2431)

- 138 **1909-S S Over Horizontal S MS66 Red NGC.** FS-1502, formerly FS-012.3. Potent luster sweeps primarily wheat-gold surfaces, although a blush of rose-red graces the lower left obverse, along with a few pinpoint flecks. A well known *Guide Book* variety, and also an important low mintage first-year issue. Census: 25 in 66 Red, 0 finer (5/09). (#92434)

Sharp 1910-S Cent, MS66 Red

- 139 **1910-S MS66 Red NGC.** Copper-gold color adorns both sides of this lustrous Premium Gem and an exacting strike delivers sharp delineation to the design elements, including completeness in the lines and grains of the wheat stalks. Well preserved surfaces are devoid of mentionable contacts or spots. From a mintage of slightly more than 6 million pieces. Census: 45 in 66 Red, 3 finer (6/09). (#2440)
- 140 **1912-D MS65 Red PCGS.** A lustrous and well struck cent with virtually unmarked surfaces. Great color enhances the eye appeal. Wispy carbon streaks are noted on the upper right obverse. A scarce issue at this level of preservation. PCGS has only certified nine finer Red examples (5/09). (#2455)
- 141 **1914-D PCGS Genuine.** Boldly struck with abrasion-free surfaces that barely show any traces of wear. A single carbon fleck is noted near the top of the right (facing) wheat ear (in the adjacent field area). The surfaces have a somewhat unnatural appearance, due to artificial toning. (#2471)
- 142 **1914-D—Improperly Cleaned—NCS. AU Details.** A fully detailed and reassuringly authenticated example of this important Lincoln cent key date. The red-brown coloration is still attractive, despite improper cleaning, and the surfaces are nearly blemish-free. (#2471)
- 143 **1914-D AU55 PCGS.** A deep brown representative of this key date. Light wear is noted on Lincoln's cheekbone and jaw, but both fields and devices appear unabraded. Much scarcer in high grade than the 1909-S VDB or 1931-S, the only series issues with a lower mintage than the '14-D. (#2471)
- 144 **1914-D AU58 PCGS. CAC.** Glossy medium brown surfaces with exceptional aesthetic appeal. Traces of blue toning add to the overall presentation on this important key-date Lincoln cent. (#2471)
- 145 **1917 MS66 Red PCGS.** The bright orange-gold luster of this Premium Gem blushes with traces of mint-green. This solidly struck coin exudes outstanding eye appeal. PCGS has certified just 17 finer Red examples (5/09). (#2497)

Superb Gem Red 1917 Cent

- 146 **1917 MS67 Red PCGS.** Lime-green borders frame the orange-red centers. Lustrous and fully struck with virtually immaculate preservation. Although 1917 cents are plentiful in typical Mint State grades, spot-free full Red pieces are surprisingly scarce. Population: 15 in 67 Red, 2 finer (5/09). (#2497)
- 147 **1917-S MS65 Red and Brown PCGS.** Strong eye appeal for this challenging and little-saved issue. Each side offers a warm blend of copper, rose, and mahogany luster. Population: 34 in 65 Red and Brown, 0 finer (5/09). (#2502)

Fully Struck 1919 Cent, MS67 Red

- 148 **1919 MS67 Red PCGS.** The surfaces are nearly flawless on this Superb Gem early P-mint, and one will have to look long and hard to find any trace of carbon. The strike is full, with the whiskers on Lincoln completely defined and the top of the O in ONE crisp as well. The finely granular surfaces have bright copper-golden color. Population: 56 in 67 Red, 15 finer (5/09). (#2515)

Gorgeous Red Gem 1920-S Cent

- 149 **1920-S MS65 Red NGC.** For the 1920-S cent, Mint State Gems of any color designation are genuine rarities, but fully Red examples are especially challenging. This copper-orange MS65 exhibits lustrous surfaces and show a well executed strike. Lincoln's hair and bowtie are especially crisp. Both sides are devoid of mentionable marks. *From The Bay State Collection, Part One.* (#2530)

- 150 **1922-D MS65 Red PCGS.** The copper-gold surfaces of this Gem display splashes of sky-blue and crimson, more noticeable on the reverse. A decisive strike leaves sharp imprints on the design elements, except for softness on the right side of the rightmost wheat stalk. An unobtrusive graze on the upper left stalk is mentioned for complete accuracy. Housed in a green label holder. Population: 82 in 65 Red, 10 finer (6/09). (#2539)

- 151 **1922 No D Strong Reverse VF30 PCGS.** FS-401, formerly FS-013.2. Die Pair 2. Bold lines within the wheat ears confirm this coveted variety. The golden-brown surfaces are unmarked but show a faint fingerprint on the field near the profile. (#3285)

- 152 **1922 No D Strong Reverse VF30 PCGS.** FS-401, formerly FS-013.2. Die Pair 2. An appealing midrange example of this key variety, the most renowned of the 1922 cents. Evenly worn with a couple of noticeable nicks near the reverse rim at approximately 5 and 9 o'clock. (#3285)

Desirable AU Details 1922 No D, Strong Reverse Cent

- 153 **1922 No D Strong Reverse—Improperly Cleaned—NCS. AU Details.** FS-401, formerly FS-013.2. Die Pair 2. Though the obverse is even more ill-defined than usual for this missing-mintmark variety, the boldly impressed wheat ears show only modest wear. Mahogany and reddish-brown surfaces are glossy with hints of pink and scattered hairlines from a past cleaning. (#3285)

Outstanding Red Superb Gem 1924 Cent

Significant Red Gem 1925-S Cent

- 154 1924 MS67 Red PCGS.** Ex: Jack Lee Collection. The 1924 Lincoln cent, sporting a mintage of 75,178,000 pieces, is readily available, even in comparatively high Mint State grades. Various commentators have noted this availability, including Q. David Bowers (2008), who described it as “common in all grades, including Mint State,” and David Lange (1996), who notes that “... gems should not be considered rare.” Indeed, at the MS65 Red level, there are sufficient extant survivors to meet current demand, and even Premium Gems can be acquired with a little patience and searching. MS67 examples, however, are elusive, and higher-grade specimens are virtually nonexistent

The surfaces of this remarkable Superb Gem are bright and primarily copper-orange. Strongly lustrous with hints of frostiness throughout. The strike is slightly above-average for the date, though Lincoln's hair and beard exhibit the usual weakness. On the reverse, the wheat ears are sharp and crisp and all lettering is clear, despite die clashing. At this lofty level, the combined certified population shows just five MS67 Red examples, one graded by NGC and four by PCGS, with none numerically finer (6/09). (#2551)

- 155 1924-S MS63 Red PCGS.** The copper-gold surfaces of this Select specimen display hints of soft bluish-violet. This sharply struck piece is denied a finer grade by a few obverse marks, yet is quite pleasing overall. (#2557)
- 156 1925-S MS63 Red PCGS.** Orange-gold luster embraces both sides of this Select S-mint representative. Incomplete definition characterizes the design elements, which is typical of the issue. What appears to be a minor semicircular planchet defect is visible in the lower left obverse. (#2566)

- 157 1925-S MS65 Red PCGS.** In 1925 the San Francisco Mint was more concerned about quantity than quality. As a result, Red Gem examples of the 1925-S cent are extremely difficult to locate. This Red Gem is housed in a green-label PCGS holder and is one of just 10 pieces so graded that PCGS has certified in more than 22 years. They have never graded a finer example (6/09). In our December 2008 Houston Sale, we offered another of those 10 Red Gem specimens, a coin that realized \$27,600. This piece has wonderful light orange surfaces with satiny luster. A few faint spots are visible, mostly limited to the reverse. The strike is excellent for the issue. (#2566)

- 158 1926-S MS64 Red and Brown PCGS.** Cherry-red, sea-green, and pumpkin-gold enrich this lustrous and unabraded near-Gem. The 1926-S is the perhaps the rarest Lincoln issue in full Red, and many advanced collectors select a quality Red and Brown example. (#2574)

Vibrant 1927 Cent, MS67 Red

- 159 1927 MS67 Red NGC. Vibrant luster exudes from both sides of this gorgeous Superb Gem, each of which displays copper-orange color in the centers and soft lime-green on the borders. A well executed strike leaves sharp, uniform definition on the design features, and mentionable contacts or spots are lacking. While the 1927, with a mintage exceeding 144 million pieces, is common in Mint State, fully Red examples sporting the technical quality and aesthetic appeal of this coin are infrequently seen. Census: 18 in 67 Red, 0 finer (6/09). (#2578)

Full Red 1944-D/S Cent, MS65

- 160 1944-D/S MS65 Red PCGS. FS-512, formerly FS-021. Previously known as the Type Two overmintmark. The original S mintmark is evident inside the D and left of the upright. Although more plentiful than the Type One overmintmark (FS-511) that is listed in the *Guide Book*, this variety is still extremely important, and especially rare and desirable in brilliant Gem Red condition. It is boldly struck with brilliant sunset-orange color and frosty mint luster. A few minor carbon flecks are evident in the left obverse field. Otherwise, the surfaces are essentially flawless. PCGS has only certified 15 full Red examples of the variety, including seven MS64 Red, six MS65 Red, and two MS66 Red (6/09). (#2728)

Red Superb Gem 1950 Cent

- 161 1950 MS67 Red PCGS. A prize for the Registry collector, this Superb Gem offers fresh copper-pink surfaces and crisp central detail. Virtually devoid of contact, and close inspection locates only infrequent pinpoint carbon. Marvelous all-around eye appeal. Population: 18 in 67 Red, 0 finer (6/09). (#2779)

- 162 1955 Doubled Die Obverse—Whizzed—NCS. AU Details. FS-101, formerly FS-021.8. This example has been "whizzed" but remains a pleasing example of this immensely popular doubled die variety. Well struck with rich reddish-mahogany color in the centers that yields to forest-green peripheral toning on both sides. (#2825)

Appealing MS63 Brown 1955 Doubled Die Cent

- 163 1955 Doubled Die Obverse MS63 Brown PCGS. FS-101, formerly FS-021.8. A glossy chocolate-brown example of the most popular doubled die in U.S. coinage, minimally abraded with considerable blue and violet overtones. Neither side shows any trace of wear, and the spread between the two sets of images is plain. Only a few minor specks preclude a finer designation. (#2825)

- 164 1971 Doubled Die MS64 Red PCGS. FS-101, formerly FS-031. In addition to the doubling at LIBERTY and the date, this near-Gem shows this variety's other main diagnostic, misalignment of the obverse die toward 10 o'clock. Pleasingly lustrous but with light abrasions that preclude a finer grade. (#92941)

Sharp 1971 Doubled Die Obverse Cent MS65 Red, FS-101

- 165 1971 Doubled Die MS65 Red PCGS. FS-101, formerly FS-031. This obverse doubled die is most prominent at LIBERTY and the date. Though it is not yet recognized as a *Guide Book* variety, it is familiar to many Lincoln cent enthusiasts. The present example has rich peach and copper-gold color with warm luster and great visual appeal. (#92941)
- 166 1984 Doubled Die Obverse MS68 Red NGC. FS-101, formerly FS-037. Fully brilliant with impressive orange mint color and frosty luster. This lovely "Doubled Ear" cent is tied for the finest that either NGC or PCGS has certified (5/09). (#3062)

**Impressive 1984 Doubled Die Obverse Cent
Tied for Finest Graded, MS68 Red**

- 167 1984 Doubled Die Obverse MS68 Red PCGS.** FS-101, formerly FS-037. Lincoln's ear, lower beard (particularly at the neck), and bowtie are prominently doubled. This is a virtually pristine champagne-orange example that shows minor pimpling in the fields, but absolutely no post-striking flaws on either side. Population: 16 in 68 Red, none finer at either service (5/09). (#3062)

- 168 2005 Satin SMS MS70 Red PCGS.** A perfectly preserved example of this unusual finish for the Lincoln cent. As one would expect, the surfaces have bright, even red mint luster. One of only 18 pieces certified by PCGS in this ultimate grade (5/09). (#93190)

PROOF LINCOLN CENTS

- 169 1911 PR65 Brown PCGS.** One of the most appealing matte proof cents one could imagine for the Brown designation. Deep pumpkin-orange and chocolate shadings mingle in the centers, while the margins show elements of blue and lavender. PCGS has graded just six finer Brown pieces (5/09). (#3309)

- 170 1956 PR67 Deep Cameo PCGS.** Cents from this era with significant cameo contrast are highly elusive. This coin has even, blazing mint red color and there are no obvious traces of carbon on either side. Certified in a green label holder. Population: 33 in 67 Deep Cameo, 6 finer (6/09).
Ex: Long Beach Signature (Heritage, 9/2006), which realized \$2,530. (#93377)

Perfect Red Deep Cameo 1982-S Proof Cent

- 171 1982-S PR70 Red Deep Cameo PCGS.** This Lincoln cent is utterly unimpeachable, from the flawless "black" mirrors to the thoroughly frosted, boldly impressed devices. The color is copper-orange with a hint of lemon-gold visible on the reverse. One of just 12 specimens assigned this ultimate grade by PCGS (5/09). (#93473)

**Important 1990 No S Cent
PR68 Red Deep Cameo**

- 172 1990 No S PR68 Red Deep Cameo PCGS.** The "missing mintmark" entry among modern proof cents, the 1990 No S has enjoyed great popularity since its discovery. This beautiful specimen has pale copper surfaces with excellent contrast between the profoundly mirrored fields and the frost over the boldly impressed devices. Population: 64 in 68 Red Deep Cameo, 21 finer (6/09). (#93506)

- 173 1999-S Close AM PR69 Deep Cameo PCGS.** The AM in AMERICA is close, and the FG initials are distant from the Lincoln Memorial. These two characteristics identify the design subtype, which was supposed to have been used only on business strikes. Fully struck, flashy, and virtually perfect. Population: 62 in 69 Deep Cameo, 0 finer (6/09). (#38222)

TWO CENT PIECE

- 174 1867 MS64 Red PCGS.** Both sides of this near-Gem are awash with copper-gold luster and exhibit sharply struck motifs. Occasional splashes of lilac and gray-green patina visit the reverse. A few light flecks preclude Gem status. Population: 35 in 64 Red, 20 finer (5/09). (#3593)

PROOF TWO CENT PIECE

**Rare Closed 3 1873 Two Cent
PR66 Red and Brown**

- 175 1873 Closed 3 PR66 Red and Brown PCGS.** Whispers of purple and light tan visit both sides of this Premium Gem proof two cent, each of which displays field-device variance at certain angles. The design features are uniformly sharp throughout, and impeccably preserved surfaces are devoid of mentionable contacts or spots. A proof-only date with both Closed 3 and Open 3 varieties available. The Open 3 proofs are considered restrikes and are somewhat scarcer. Encapsulated in a green label holder. Population: 16 in 66 Red and Brown, 0 finer (6/09). (#3652)

THREE CENT SILVER

- 176 1858 MS65 NGC.** Electric-blue, purple, and golden-brown patination concentrates at the borders of this Gem trime. Some of the usual localized weakness is seen, as are some light clash marks. Census: 43 in 65, 29 finer (6/09). (#3674)

Superb Gem 1858 Three Cent Silver

- 177 1858 MS67 NGC.** This beautiful Superb Gem displays rich, swirling tones of gunmetal-blue, crimson, and golden-olive patina. It is devoid of abrasions on either side, although both sides are prominently die clashed. A gorgeous trime ideal for a high grade silver type set. Census: 15 in 67, 0 finer (6/09).

Ex: Long Beach Signature (Heritage, 6/2005), lot 5325; Central States Signature (Heritage, 4/2006), lot 757. (#3674)

- 178 1859 MS64 ★ NGC.** The layers of multicolored toning over each side of this near-Gem example are its most noteworthy attribute, and the deep coloration is so impressive that NGC has awarded the piece with its coveted Star designation, denoting exceptional eye appeal. The reverse design details are softly struck, limiting the grade, but there are no distracting blemishes on either side. Census: 2 in 64 ★, 3 finer (6/09). (#3677)

Sharp 1861 Three Cent Silver, MS67

- 179 1861 MS67 NGC.** The lustrous surfaces of this Superb Gem are essentially untuned and exhibit sharply struck design elements. Both sides are devoid of mentionable contact marks or spots. Clash marks are visible on both obverse and reverse. Census: 28 in 67, 6 finer (6/09). (#3679)

- 180 1862 MS66 NGC.** A frosty and lustrous Premium Gem, this piece has exceptional iridescent toning on both sides. The central design elements are a trifle weak as usual. (#3680)

Prooflike MS67 1871 Three Cent Silver

- 181 1871 MS67 Prooflike NGC.** The obverse closely resembles a proof, with a frosted central star and a mirrored field. The reverse is satiny and less reflective. The arrows are softly impressed, as is a small portion of the shield directly opposite. The borders have light autumn-gold shades. Only 3,400 business strikes were coined. Census: 1 in 67 Prooflike, none finer as Prooflike (6/09). (#3692)

PROOF THREE CENT SILVER

- 182 1865 PR65 NGC.** Low intensity beige-gold, sky-blue, and lavender patination adorns the well cared for surfaces of this Gem proof. A solid strike leaves crisp definition on the design elements. Housed in a prior generation holder. Census: 26 in 65, 25 finer (6/09). (#3715)

- 183 1867 PR66 NGC. CAC.** This fully struck specimen features lovely rose-red, canary-gold, and blue-green patina. A few pinpoint flecks deny perfection. A scant 625 proofs were struck. Census: 21 in 66, 9 finer (5/09). (#3717)

Beautiful 1870 Three Cent Silver, PR67 ★

- 184 1870 PR67 ★ NGC.** Rarely seen as a business strike, which makes the proofs of this year all the more desirable as an alternative for date collectors. Almost flawless watery surfaces exhibit gentle shadings of turquoise-blue and reddish-rose on each side. Population: 1 in 67 ★, only one finer (5/09). (#3721)

- 185 1870 PR65 Cameo NGC.** A gorgeous proof with mirrored fields and lustrous, contrasting devices. This coin displays album toning, a term devised for coins that have lighter centers and iridescent toning at the borders, forming rings of rainbow color. The richer toning near the rims is a result of the sulphur content in the cardboard of old coin albums. Census: 4 in 65 Cameo, 5 finer (6/09). (#83721)

- 186 1871 PR64 PCGS.** Rich cobalt-blue, lavender, and gold-orange patination visits the luminous surfaces of this near-Gem proof. The design elements are exquisitely struck. Some fine hairlines interspersed with die polish lines in the fields are visible under a loupe. Population: 86 in 64, 68 finer (6/09). (#3722)

THREE CENT NICKELS

- 187 **1867 MS66 NGC.** The lustrous surfaces of this Premium Gem are essentially untuned and devoid of mentionable marks. Generally well struck except for softness on some of the beads on the crown and lines of the first two stands of III. Clash marks are visible on both sides. Census: 9 in 66, 2 finer (6/09). (#3733)

Gorgeous 1885 Three Cent Nickel, MS65

- 188 **1885 MS65 PCGS.** Circulation strikes produced this year numbered only 1,000 coins, compared to almost 4,000 proof pieces, and the business strikes are seldom seen in higher Mint State grades. A medley of gray, sky-blue, lavender, and beige-gold patina resides on the lustrous surfaces of this gorgeous three cent nickel. A solid strike imparts strong definition to the design features, including all the lines in the III. Nicely cared-for surfaces are devoid of mentionable contact marks or spots. Housed in a green label holder. Population: 12 in 65, 10 finer (5/09). (#3753)

- 189 **1887 MS65 NGC.** Lustrous nickel-gray surfaces are minimally marked. Softness is noted along portions of the rims and in a few lines of the denomination, otherwise the devices reveal strong definition. Census: 23 in 65, 4 finer (6/09). (#3755)

PROOF THREE CENT NICKELS

Captivating PR66 Cameo 1865 Three Cent Nickel

- 190 **1865 PR66 Cameo PCGS.** A pleasingly toned specimen of this first-year proof three cent nickel issue, with olive and blue shadings letting through an occasional glimpse of gray. Despite the toning, this piece retains impressive contrast, particularly on the obverse. Carefully preserved and gorgeous. Population: 23 in 66 Cameo, 1 finer (5/09). (#83761)

Beautiful 1867 Three Cent Nickel, PR66 Cameo

- 191 **1867 PR66 Cameo PCGS.** Razor-sharp striking details and fully reflective fields are seen on this lightly toned, seemingly pristine Premium Gem. The devices on both sides are lustrous, but with sufficient frost to create significant cameo contrast. Tied for the finest Cameo example certified by PCGS (5/09). (#83763)
- 192 **1875 PR65 PCGS.** An impressive Gem proof in an older green-label holder. Both sides have pleasing light gray surfaces with wisps of gold and ice-blue toning. PCGS has only certified 13 finer pieces (5/09). (#3771)
- 193 **1882 PR67 Cameo NGC.** An amazing Superb Gem Cameo proof with brilliant gray mint surfaces and bold design features. The fields are fully and deeply mirrored around the lustrous devices. An aesthetically attractive piece for the connoisseur. Census: 22 in 67 Cameo, 2 finer (5/09). (#83778)

Impressive 1882 Three Cent Nickel, PR68 Cameo

- 194 **1882 PR68 Cameo PCGS. CAC. Filled 2.** After an enormous (for the series) mintage of more than 1 million business strikes in 1881, the mintages of both proofs and business strike three cent nickels in 1882 plummeted. This is perhaps because so many 1882 Shield nickels were issued, a gigantic coinage in excess of 11 million pieces, as Philadelphia Mint personnel geared up to introduce the new Liberty five cent nickel in 1883. The pristine, mirrored fields complement chalky, equally well preserved frosty features. A touch of streaky reddish color coats both sides. Inspection with a glass leaves the viewer just as impressed as a casual glance, the sure sign of an outstanding proof type coin. A virtually unimprovable specimen. Population: 4 in 68 Cameo, 0 finer (5/09). (#83778)
- 195 **1886 PR67 PCGS.** A wonderful Superb Gem with excellent aesthetic appeal. Whispers of golden-brown patina do little to diminish the coin's brilliance. The bold design motifs are subtly lustrous, with some evidence of cameo contrast on both sides. Population: 43 in 67, 3 finer (5/09). (#3782)

SHIELD NICKELS

Dazzling 1866 Rays Shield Nickel MS66

- 196 1866 Rays MS66 NGC.** Despite a mintage of over 14.7 million pieces for the issue, this Premium Gem is tied for numerically finest graded by either NGC or PCGS (6/09). Gold-kissed nickel-white surfaces are brightly lustrous and carefully preserved. Slight striking softness on the reverse stars has little effect on the eye appeal. (#3790)

- 197 1873 Closed 3 MS65 PCGS.** It is extremely difficult to differentiate Closed 3 and Open 3 Shield nickels. Indeed, David Bowers (2006) says: "Shield nickel collectors joke that there are three logotypes for 1873: Close 3, Open 3, and 'I Don't Know 3.'" While the PCGS insert says "Closed 3," we would opt for the third choice. In any event, this Gem displays whispers of gold-tan patina under magnification. Lustrous surfaces are well struck and nicely preserved. A light crack travels through the wreath. Population: 10 in 65, 3 finer (5/09). (#3801)

Rare MS66 1881 Shield Nickel

- 198 1881 MS66 NGC.** The low-mintage 1881 Shield nickel (68,800 business strikes) is elusive, especially in the better levels of Mint State. This Premium Gem displays lustrous light gray surfaces that exhibit fairly well defined devices, though minor softness is apparent in the shield stripes and the letters GO of GOD. Devoid of mentionable contacts. Census: 14 in 66, 4 finer (6/09). (#3811)

- 199 1883 MS66 PCGS.** The final year of issue for the Shield design, represented here by a remarkable Premium Gem. The upper obverse has several heavy die cracks that will intrigue the die state aficionado. Brilliant gray luster complements untoned surfaces. PCGS has only certified nine finer examples (5/09). (#3813)

PROOF SHIELD NICKELS

Scarce PR66 Cameo 1866 Rays Nickel

- 200 1866 Rays PR66 Cameo PCGS.** A lightly toned and well struck Premium Gem with flashy fields and exemplary preservation. The low proof mintage of 600+ pieces is in demand from both Shield nickel specialists and proof type collectors. Population: 28 in 66 Cameo, 3 finer (6/09).
Ex: The Compradore Collections (Heritage, 6/2008), lot 362, which realized \$7,475. (#83817)

Impressive PR65 Cameo 1867 No Rays Nickel

- 201 1867 No Rays PR65 Cameo PCGS.** Reverse IIa, as indicated by a star point between A and M of AMERICA. Fully struck with lovely light toning, this remarkable specimen displays impeccably preserved surfaces that are nearly pristine. Both sides show a mild, yet distinct cameo effect. Population: 29 in 65 Cameo, 7 finer (5/09). (#83821)

- 202 1868 PR66 PCGS. CAC.** A special piece with unusually smooth surfaces and atypical sharpness throughout, especially on the reverse stars. Some watery reflectivity is evident in the fields, and the surfaces are impeccably preserved. A small amount of milkiness is noted on each side. Population: 8 in 66, 0 finer (6/09). (#3822)

- 203 1870 PR66 Cameo NGC.** An exquisite proof Premium Gem, as frosty and eye-appealing as any of this type that we have seen recently. Some light, milky patina resides near the left obverse border, and a glittering haze spreads throughout the other obverse areas. Fully struck and entirely pristine, as expected for a high-grade proof coin. Census: 11 in 66 Cameo, 2 finer (5/09). (#83824)

Gorgeous PR67 1871 Nickel

- 204 **1871 PR67 NGC.** Both sides of this Superb Gem present a degree of cameo contrast, though the frost on the reverse devices is insufficient for a designation. Boldly impressed nickel-white surfaces show hints of gold and rose close to the rims. Amazing eye appeal. Census: 5 in 67, 0 finer (6/09). (#3825)

- 205 **1872 PR66 Cameo NGC. CAC.** Essentially untoned surfaces display strong field-motif variance. Exquisitely struck throughout. Some tiny flecks are visible on each side. Census: 14 in 66 Cameo, 4 finer (6/09). (#83826)

Exquisite PR66 Ultra Cameo 1876 Nickel

- 206 **1876 PR66 Ultra Cameo NGC.** Sales at the Centennial Exposition in Philadelphia helped make the 1876 nickel more available in proof than preceding issues. Ultra/Deep Cameos, however, are rare—NGC and PCGS have seen only 11 such coins (6/09). The current boldly struck Premium Gem is essentially untoned and exhibits noticeable field-motif contrast. The surfaces on both sides are attractively preserved.
Ex: Long Beach Signature (Heritage, 2/2007), lot 2525, which realized \$4,600. (#93830)

Conditionally Rare PR67 Cameo 1879 Nickel

- 207 **1879 PR67 Cameo NGC.** Clear doubling shows on the date, as Breen documents in his *Proof Encyclopedia*. This variety is different from the overdate, which shows a small spike upward from the right side of the ball ornament above the date. Nifty shelf or strike doubling shows on some of the other areas of the obverse. The silver-white surfaces show splendid eye appeal. Census: 6 in 67 Cameo, 0 finer (6/09). (#83833)

- 208 **1879/8 PR67 PCGS.** Breen-2514, "very scarce." An absolutely exquisite example of this popular overdate variety, listed both in Breen and the *Guide Book*. Fully struck and virtually pristine, with untuned, impeccably preserved surfaces. Population: 24 in 67, 7 finer (5/09). (#3834)

- 209 **1881 PR67 PCGS.** A Superb Gem proof with sharply struck obverse and reverse details. The surfaces have attractive blue-gray color with accents of pale gold and lilac toning. This example is tied for the finest certified by PCGS. Population: 23 in 67, 0 finer (5/09). (#3836)

LIBERTY NICKELS

- 210 **1883 No Cents MS67 NGC.** Untoned satiny surfaces display pleasing luster and have been well cared for. Sharply struck except for minor weakness in the left corn ear. Census: 50 in 67, 0 finer (6/09). (#3841)

- 211 **1883 No Cents MS67 NGC.** Tied for the finest that either NGC or PCGS has certified, this remarkable Superb Gem is boldly detailed with frosty nickel-gray luster. Census: 50 in 67, 0 finer (6/09).
From The Bay State Collection, Part One. (#3841)

- 212 **1883 No Cents MS67 NGC.** This spectacular Superb Gem is tied for finest certified and would make a great addition to a Registry set. Untoned and attractive, this piece boasts captivating satiny luster throughout. Several stars are a trifle soft, as usual, but the central design elements are powerfully impressed. Numerous die cracks appear around the perimeter of both sides. Census: 50 in 67, 0 finer (6/09).
From The Bay State Collection, Part One. (#3841)

- 213 **1885 AU50 PCGS.** The key date to the Liberty nickel series, the 1885 is found on more collector want lists than any other issue from 1883 to 1912. This sharply detailed example has pleasing light gray surfaces with modest grade-consistent abrasions. (#3846)

- 214 **1886 AU58 PCGS.** Pastels of multicolored patina rest on both sides of this near-Mint State nickel. Nicely defined with ample luster and few marks. One of the key dates in the Liberty Head nickel series. (#3847)

- 215 **1886 AU58 NGC.** This key-date representative is toned in orange hues and retains a good amount of luster. Well struck except for weakness in the stars along the right border. Some trivial circulation marks do not disturb. (#3847)

- 216 **1886 MS63 PCGS.** This is a conditionally scarce Liberty nickel from a business strike mintage in excess of 3.3 million pieces. Surprisingly few of that number have survived in Uncirculated condition. This satiny example displays essentially unmarked surfaces that show slight golden toning intermingled with the original steel-gray coloration. The obverse stars and the left ear of corn on the reverse are weak, preventing a higher grade. (#3847)

Popular Near-Gem 1886 Nickel

- 217 **1886 MS64 PCGS.** Strongly defined on the portrait, if slightly softly struck on the stars and the lower areas of the wreath. The luster is pleasing, and splashes of peach toning visit otherwise nickel-white surfaces. While the 1886 nickel is not so much of a key date as its counterpart from the year before, it is nonetheless challenging, particularly in Mint State. PCGS has graded 38 finer examples (5/09). (#3847)

218 1890 MS65 PCGS. Ex: Friend. This is a conditionally scarce Gem example with bright, gleaming luster and lightly toned surfaces that are silver-gray in the centers, changing to attractive gold color near the obverse peripheries. An arc of coral-tan patina occupies most of the upper left reverse quadrant. Other than a shallow luster graze just above the denominational V, there are no mentionable blemishes on either side. Population: 42 in 65, 11 finer (5/09). (#3851)

219 1895 MS65 PCGS. Crisply struck with essentially complete details throughout, even on the frequently troublesome reverse left ear of corn. A dazzlingly lustrous Gem with an impressive cartwheel sheen across each side, and remarkably clean surfaces. Population: 51 in 65, 10 finer (6/09). (#3856)

Dynamic Superb Gem 1899 Nickel

220 1899 MS67 NGC. Blended olive, gold, and lilac toning adorns this well preserved turn-of-the-century nickel. Luster sweeps across the smooth surfaces, and the strike is full with the exception of the left ear of corn. Desirable in such exceptional quality. Census: 4 in 67, 0 finer (6/09). (#3860)

221 1902 MS66 PCGS. Ex: Friend. Crisply struck with terrific luster and lovely silver-gray color with golden overtones. Several faint areas of milky lilac-blue toning occur near the obverse periphery. An impressively preserved Premium Gem example. Population: 46 in 66, 3 finer (5/09). (#3863)

Important Superb Gem 1902 Nickel

222 1902 MS67 NGC. A hint of greenish-gold patina graces the highly lustrous surfaces of this pleasing Superb Gem. Solidly struck overall, though the left ear of corn is filled. The obverse is exceptionally clean, while two tiny contact marks are noted inside the wreath on the reverse. Census: 4 in 67, 1 finer (6/09). (#3863)

223 1903 MS66 PCGS. Ex: Friend. A pleasingly clean and essentially untuned Premium Gem, with well preserved surfaces that are free of distractions. A trace of milkiness between Liberty's jaw and ear is the sole possible objection. Typically struck and a bit weak on the left ear of corn and a few obverse stars. Population: 76 in 66, 2 finer (5/09). (#3864)

224 1906 MS66 PCGS. Splashes of red-gold toning add color to the mostly silver-gray surfaces. The design elements are well brought up, though the corn ear and leaves left of the bow reveal the oft-seen softness. There are no mentionable marks on either side. Vibrant luster enhances the wonderful eye appeal. Population: 12 in 66, 0 finer (6/09). (#3867)

Rich, Lustrous MS66 1908 Liberty Nickel

225 1908 MS66 PCGS. While not a rare date with more than 22 million pieces produced, the 1908 V nickel is, like other issues, a conditional rarity in MS66 or finer grades. The mint luster of this piece immediately grabs the viewer's attention. Secondly, the strength of strike and lovely, original golden toning are of visual importance. A few shallow marks escape notice without a glass. Population: 13 in 66, 0 finer (6/09). (#3869)

226 1912 MS66 PCGS. CAC. Lovely golden-bronze toning adorns the intensely lustrous, virtually pristine surfaces of this Premium Gem example. The striking definition is extremely bold, and only the reverse left ear of corn shows noticeable weakness. Population: 24 in 66, 0 finer (6/09). (#3873)

Appealing Near-Gem 1912-S Nickel

227 1912-S MS64 PCGS. A great example of this popular mintmarked Liberty nickel key, well-defined overall with soft quicksilver luster beneath rich patina. Nickel-blue and olive shadings dominate, and splashes of green-gold are present near the margins as well. PCGS has certified 87 finer examples (5/09). (#3875)

PROOF LIBERTY NICKELS

Premier 1885 Liberty Nickel, PR67

228 1885 PR67 PCGS. The 1885 Liberty nickel is the premier issue among business strikes, creating additional demand on those proofs that still exist today. This Superb Gem approaches the finest quality that has ever been certified. It is boldly detailed with subtle contrast. The fields are light gray with lovely violet and iridescent toning highlights. Few blemishes are evident on either side, even under a glass. Population: 15 in 67, 1 finer (5/09). (#3883)

Charming PR67 1886 Nickel

- 229 **1886 PR67 PCGS. CAC.** This Superb Gem example displays essentially flawless, pristine surfaces and just a hint of light golden patina over silver-gray fields. As is often seen on the issue, this example has a satiny appearance, not the typical mirrored fields of a proof. However, the strike is full and sharp, a clear indication of proof manufacture. It is difficult to conceive of a finer example, and indeed none are graded finer. Population: 16 in 67, 0 finer (5/09). (#3884)

Singular PR67 Cameo 1888 Nickel

- 230 **1888 PR67 Cameo NGC.** This pearl-gray example is nearly devoid of color, although tilting it at the proper angle displays the desired black-on-nickel contrast. The piece is almost devoid of contact as well, save for a single mark well-hidden in the hair just above the ear. The single finest Cameo example of the issue certified by NGC (6/09).
From The Bay State Collection, Part One. (#83886)

- 231 **1890 PR66 NGC.** Pastel multicolored toning adorns both sides of this Premium Gem. Sharply struck motifs display modest contrast with the reflective fields. Some light marks and spots are visible on the obverse. Census: 13 in 66, 1 finer (6/09). (#3888)

Sensational 1893 Liberty Nickel PR67 ★ Cameo

- 232 **1893 PR67 ★ Cameo NGC.** An amazing display of toning combines sky-blue at the center, with peripheral gold, violet, and pale green. The contrast between the satiny devices and deeply mirrored fields is exceptional, and every element of the design is boldly defined. Census: 4 in 67 ★ Cameo, 0 finer (6/09). (#83891)

- 233 **1901 PR67 Cameo NGC. CAC.** The razor-sharp striking definition on this piece includes the obverse stars, the left reverse ear of corn, and every denticle on both sides. Essentially untoned, with unusually fine mint frost on the devices and considerable reflectivity in the fields. The Superb surfaces are immaculately preserved. Census: 7 in 67 Cameo, 0 finer (6/09). (#83899)

- 234 **1908 PR66 Cameo PCGS.** Well struck, if slightly weak on the reverse left ear of corn, with dramatically reflective fields, lovely pastel bluish-violet and golden colors, and attractive cameo contrast on each side. Population: 10 in 66 Cameo, 4 finer (5/09). (#83906)

- 235 **1909 PR67 NGC.** Sharply struck frosty design elements offer a degree of contrast with the fields. Impeccably preserved surfaces display an occasional wisp of barely discernible orange color under magnification. (#3907)

- 236 **1909 PR66 ★ Cameo NGC. CAC.** White surfaces exhibit excellent field-motif contrast and are exquisitely preserved. A decisive strike leaves crisp definition on the design features. Census: 4 in 66 ★ Cameo, 4 finer ★ Cameo (6/09). (#83907)

BUFFALO NICKELS

- 237 **1913 Type One MS67 PCGS. CAC.** Light nickel-gray color overall with glimpses of gold and tan. This striking Superb Gem has the frosty luster and rugged textures that characterize the finest examples of this popular one-year type. (#3915)

Superlative 1913 Type One Nickel, MS68

- 238 **1913 Type One MS68 NGC.** A top-flight example of this popular one-year type, strongly lustrous with the sharp and rugged detail that makes the variety so prized. Pale nickel-blue patina drapes the centers, while the margins show varying degrees of green-gold and olive toning. Census: 12 in 68, 0 finer (5/09). (#3915)

- 239 **1913-S Type One MS66 NGC.** A handsome Premium Gem with strong luster and rugged design definition. Rich champagne and gold shadings dominate the moderate patina. The most elusive of all Type One Buffalo nickels. Census: 46 in 66, 14 finer (6/09). (#3917)

- 240 **1913-S Type One MS66 PCGS.** Soft yellow-gold patina resides on the lustrous surfaces of this Premium Gem S-mint representative. This is a well cared-for, sharply struck piece. Challenging to locate in a finer grade. (#3917)

- 241 **1913-D Type Two MS65 PCGS.** The nickel-gray surfaces of this Gem display soft luster and just a few unobtrusive reverse marks. Well struck except for weakness in the hair on the bison's head. (#3922)

- 242 **1914-S MS65 NGC.** The overall striking definition seen on both sides of this Gem example is unusually sharp for a business strike Buffalo nickel, and only the word LIBERTY reveals slight weakness. The satiny surfaces show mostly olive patina, but rainbow hues of pink and bright-green provide occasional colorful accents. Census: 54 in 65, 27 finer (6/09). (#3926)

Bold MS66 1915-S Nickel

- 243 1915-S MS66 PCGS.** This impressively struck Premium Gem has shimmering luster and original olive and chestnut-gold toning. Carbon is minimal, and neither side shows any noticeable abrasions. The bison's head, shoulder, and tail are boldly defined, as are the mintmark and date. Outstanding quality for this low mintage issue. Population: 27 in 66, 3 finer (6/09). (#3929)

Lovely Premium Gem 1915-S Nickel

- 244 1915-S MS66 NGC.** This lovely S-mint Buffalo nickel has exquisite olive, gold, and iridescent toning over satiny luster. The underlying fields have a slightly reflective appearance. Although the tops of LIBERTY are slightly indistinct, it is otherwise boldly detailed. Census: 25 in 66, 0 finer (6/09). (#3929)

Luminous MS66 1915-S Nickel

- 245 1915-S MS66 NGC.** Substantially above-average detail for this early S-mint issue. Each side offers attractive, luminous luster beneath subtle blue-violet and green-gold shadings. A carefully preserved Premium Gem with remarkable eye appeal. NGC has graded no numerically finer representatives (5/09). (#3929)
- 246 1916-D MS65 PCGS.** Wisps of champagne, ice-blue, and lavender patina adhere to the lustrous surfaces of this lovely Gem. Generally well struck on the devices. A few light flecks are visible over each side. PCGS has seen only 11 coins finer, and NGC four better (6/09). (#3932)

Exquisite Premium Gem 1916-D Nickel

- 247 1916-D MS66 NGC.** Strongly impressed for this earlier Denver issue with hints of frostiness to the luster. Glimpses of gold and peach patina grace otherwise nickel-white surfaces. Fantastically appealing in all respects, the rare example that can satisfy both technically minded and aesthetically oriented collectors. Census: 4 in 66, 0 finer (6/09). (#3932)

Challenging 1916-S Nickel MS66

- 248 1916-S MS66 PCGS.** Medium tan-gold and forest-green embrace this lustrous Premium Gem. Well struck for an early S-mint issue, since only the feather tips and the bison's forehead hair lack precise definition. Marks are virtually absent, and carbon is limited to a few microscopic flecks beneath the bison's beard. Struck from a prominently clashed obverse die. Population: 28 in 66, 4 finer (6/09). (#3933)
- 249 1917-D MS64 PCGS.** Subtle aqua-green and rose coloration becomes evident under magnification. Lustrous surfaces exhibit well struck motifs save for the usual softness in the hair above the bison's forehead. Both sides are devoid of mentionable marks. (#3935)
- 250 1917-D MS65 PCGS.** An attractive Gem example of this early Denver Mint issue. Gold and silver-gray coloration alternate across the satiny surfaces. The design elements are boldly defined, especially on the reverse, and surface marks are minimal. (#3935)
- 251 1917-D MS65 PCGS.** Delicate golden peripheral accents enliven otherwise nickel-white surfaces. Overall detail is sharp, though a degree of die erosion is noted near the rims. Despite a mintage of over 9.9 million pieces, the 1917-D is conditionally rare any finer than this Gem; PCGS has certified just 13 such examples (5/09). (#3935)
- 252 1918/7-D Good 6 PCGS.** FS-101, formerly FS-016.5. The thick downstroke of the 7 is apparent despite a lengthy stint in circulation. The obverse rim has wispy parallel marks at 2:30, and a nearby thin mark reaches the Indian's nose. An important key date. (#3939)

Desirable Very Fine 1918/7-D Nickel

- 253 **1918/7-D VF20 PCGS.** FS-101, formerly FS-016.5. The date and mintmark are bold, and the shape of the underdigit 7 is obvious within the 8. Generally dove-gray with deeper charcoal toning in selected design recesses. A key to the series, and desirable with a distinct date in an affordable grade. (#3939)

Coveted VF30 1918/7-D Nickel

- 254 **1918/7-D VF30 NGC.** FS-101, formerly FS-016.5. Stone-gray devices complement the dove-gray fields. The thick crossbar and downstroke of the underdigit 7 are obvious on this midgrade key date nickel. Free from remotely consequential marks, and an important example of this coveted overdate. Many 20th century overdate varieties (which also include the 1918/7-S quarter, the 1943/2-P nickel, and the 1942/1 and 1942/1-D dimes) were struck during the two World Wars, perhaps because trained personnel entered military service. (#3939)

Colorful Near-Gem 1919-S Nickel

- 255 **1919-S MS64 NGC.** Original sun-gold, ruby-red, jade-green, and dove-gray toning blankets this shimmering and unmarked near-Gem. The centers display minor softness, but the mintmark is clear and the date is sharp. A popular and difficult early branch mint issue, much more affordable at the MS64 level than in higher grades. (#3943)
- 256 **1920-D MS64 PCGS.** CAC. Light walnut-brown toning embraces this lustrous and unabraded branch mint near-Gem. The strike is generally good, although the curve of the tail is soft. A better date in all grades, and desirable in the present quality. (#3945)

- 257 **1920-D MS64 NGC.** A stunning Choice Mint State example of the scarce 1920-D Buffalo nickel, with vibrant gold and rainbow toning over satiny gray luster. In *A Guide Book of Buffalo and Jefferson Nickels*, Dave Bowers assigns MS64 the "Optimal Collecting Grade" and writes: "This issue will be a challenge for the connoisseur." NGC has certified 28 finer examples (5/09). (#3945)

- 258 **1923 MS66 PCGS.** CAC. A strikingly toned Premium Gem with sky-blue, heather, and pale green toning over quicksilver luster. Slight central striking softness is typical for the issue. PCGS has graded only nine finer examples (5/09). (#3949)

- 259 **1923 MS66 NGC.** Low intensity violet, lilac, and gold-beige patina graces the lustrous surfaces of this Premium Gem. Generally well struck and nicely preserved. Census: 45 in 66, 11 finer (6/09). (#3949)

Challenging Gem 1923-S Nickel

- 260 **1923-S MS65 NGC.** A charming Gem representative of this challenging S-mint issue, softly lustrous beneath intense, dusky orange and mauve patina. Excellent surface quality and an unusually bold strike, though trifling softness is noted at the bison's shoulder. Census: 27 in 65, 7 finer (6/09). (#3950)

Impressive MS65 1923-S Buffalo Nickel

- 261 **1923-S MS65 PCGS.** CAC. David Lange notes in *The Complete Guide to Buffalo Nickels* that despite its relatively small mintage (6.14 million pieces), the 1923-S nickel is available in all grades short of Gem. NGC and PCGS have graded almost 60 MS65 coins, and fewer than 10 finer. This Gem specimen displays light golden-gray color resting upon lustrous surfaces. The design elements are better struck than usually seen on the issue, though minor softness is seen in portions of the hair on the bison's head. Significant marks are absent. Population: 32 in 65, 2 finer (6/09). (#3950)

Satiny MS65 1924-D Buffalo Nickel

- 262 1924-D MS65 NGC.** This bright, satiny Gem offers delicate orange-gold overtones. The smooth surfaces exhibit generally bold definition, although the hair on the bison's head is weak, and the eye appeal is expectedly strong for the assigned grade. Both sides are devoid of significant marks. NGC has seen just 20 coins in MS65, with only one finer survivor (5/09). (#3952)

Remarkable Superb Gem 1925 Nickel

- 263 1925 MS67 PCGS.** A wondrously sharp striking impression on the reverse fully outlines Fraser's famous design, including the more subtle aspects of the bison's head, hair, and face. The obverse is boldly detailed if not quite as razor-sharp, with more typical softness noted on the Indian's hair detail. The surfaces are impeccably preserved, however, and display remarkable, shimmering luster, along with appealing golden-gray coloration. Population: 6 in 67, 0 finer (6/09). (#3954)

Beautifully Toned 1925-D Nickel, MS65

- 264 1925-D MS65 NGC.** A beautifully toned piece with bright blue in the centers that is surrounded by gold at the rims. Widely regarded as one of the great strike rarities in the series, this piece shows the usual softness of high point detail. However, when compared to other 1925-D nickels, this piece is far above average and actually shows good definition on the obverse. Census: 50 in 65, 11 finer (5/09). (#3955)

Elusive Choice Mint State 1925-S Nickel

- 265 1925-S MS64 PCGS.** This branch mint near-Gem displays sweeping luster and attractive golden-tan and steel-gray toning. Virtually void of contact, and typically brought up at the borders and on the devices. The peripheral orange-peel texture is as struck, from dies long in use.
Ex: Long Beach Signature (Heritage, 9/2004), lot 5974, which realized \$3,680. (#3956)

Scarce Near-Gem 1927-S Nickel

- 266 1927-S MS64 PCGS.** A scarce S-mint issue, one seldom encountered in such a superior state. As generally seen on San Francisco nickels from the 1920s, this piece lacks complete high point definition. The surfaces are bright and satiny, with an even layer of rose patina over each side. (#3962)
- 267 1928-S MS64 PCGS.** Pastel reddish-tan and ice-blue patina is only evident under inspection with a loupe. Localized softness is seen on the design elements, as is the case with most examples of this date and mintmark. A few minute marks help to prevent Gem status. (#3965)

Singular MS67 ★ 1928-S Nickel

- 268 1928-S MS67 ★ NGC.** This is the sole finest 1928-S nickel in the combined certified population (6/09), and it looks every bit the Superb Gem. While David Lange's *Complete Guide to Buffalo Nickels* notes that the majority of 1928-S nickels show "a general softness in the date, the mintmark and the bison's forehead," this piece's detail is sharp and excellent throughout. Brightly lustrous, exquisitely preserved surfaces are awash in colorful toning, gold and pink at the centers with pale blue at the fringes. This amazing survivor's bold and gorgeous eye appeal should attract the discerning collector. (#3965)

Stunning MS67 1929-S Nickel

- 269 1929-S MS67 NGC.** A remarkable Superb Gem representative of this San Francisco Buffalo nickel issue, pleasingly lustrous beneath striking gold, blue, and peach toning. Slight softness of strike is noted in the centers, but the bison's horn is sharp. Tied for numerically finest known to NGC or PCGS (5/09). (#3968)

Sparkling 1930 Nickel, MS67

- 270 1930 MS67 NGC.** The 1930 Buffalo nickel, with a mintage approaching 23 million pieces, can be readily located in Mint State through the Gem level. Premium Gems are more difficult, and higher-grade specimens are elusive. Champagne-gold, ice-blue, and maroon patina is slightly deeper in hue on the reverse of this highly lustrous Superb Gem. Minor softness is seen on the Indian's hair, but overall the strike is better than usually seen on this issue. The only mark of note occurs in the field under the bison's neck. Census: 5 in 67, 0 finer (5/09). (#3969)

- 271 1935 Doubled Die Reverse AU50 PCGS.** FS-801, formerly FS-018. FIVE CENTS and E PLURIBUS UNUM are boldly doubled on this important variety. "This variety is extremely rare in any grade above Very Fine. About 10 are known in Mint State," according to Bill Fivaz and J.T. Stanton in the fifth edition of the *Cherrypickers' Guide*. This attractive AU coin has considerable luster and light champagne toning. (#93974)

Superb Gem 1935-S Buffalo Nickel With Repunched Mintmark

- 272 1935-S MS67 PCGS.** Ex: A D M Collection. RPM-1. An obvious repunched mintmark; the mintmark was first punched in to the right of the final position. Colorfully toned in lime-green and apricot shades. Lustrous and pristine, with a good strike given its San Francisco status. Population: 28 in 67, 0 finer (6/09). Ex: *Long Beach Signature* (Heritage, 9/2007), lot 768, which realized \$5,175. (#3976)

- 273 1937-D Three-Legged AU58 ANACS.** FS-901, formerly FS-020.2. The semibright surfaces of this three-legged near-Mint State specimen are imbued with whispers of apple-green, ice-blue, and violet patina. Nice detail shows on the design elements, and both sides are devoid of serious marks. (#3982)

- 274 1937-D Three-Legged MS61 NGC.** FS-901, formerly FS-020.2. A sharply struck example of this scarce variety. Slightly subdued mint luster with a few smaller surface marks and pale rose-golden color. Difficult to locate in the Mint State grades. (#3982)

- 275 1937-D Three-Legged MS62 NGC.** FS-901, formerly FS-020.2. A conditionally scarce Uncirculated example of this famed and immensely popular issue. The bison's forward leg is missing, due to overly enthusiastic die polishing by some hapless Mint employee. Boldly struck, with the usual tiny areas of scattered die rust on each side. Post-striking blemishes are nearly nonexistent on the gunmetal-gray surfaces of this slightly muted specimen. (#3982)

- 276 1937-D Three-Legged MS62 NGC.** FS-901, formerly FS-020.2. Traces of pale blue and light gold toning grace the gray-gold obverse, with rose toning on the reverse. Fully lustrous and boldly defined. An excellent representative of this popular *Guide Book* variety. (#3982)

PROOF BUFFALO NICKELS

- 277 1914 PR66 PCGS.** Soft greenish-gold patina on the obverse cedes to violet and light nickel-gray on the reverse. Impeccably preserved surfaces exhibit sharply struck motifs. (#3991)
- 278 1914 PR66 NGC.** Deep peach patina dominates, but cedes to ice-blue across selected high points. A powerful loupe and a strong light fail to locate any imperfections. Exquisitely struck, and highly desirable in such quality. A mere 1,275 proofs were struck. (#3991)
- 279 1914 PR66 NGC.** Demand for proof Buffalo nickels dropped sharply from 1913 to 1914, with the latter year's mintage of 1,275 specimens falling below the total for either the Type One or Type Two proofs of 1913. This exquisitely detailed Premium Gem is richly textured beneath dappled orange and sage patina. Carefully preserved and impressive. (#3991)
- 280 1936 Type One—Satin Finish PR66 PCGS.** Light nickel-gray toning overall with glimpses of peach at the margins. This Premium Gem shows excellent striking definition, customary for proofs of the era. The proof Buffalo nickel series came in three different finishes, matte, satin, and brilliant. The satin finish was only used for a portion of the 1936 proofs. Encased in a green label holder.
Ex: FUN Signature (Heritage, 1/2009), lot 883, which realized \$1,610. (#3994)
- 281 1936 Type One—Satin Finish PR66 PCGS.** Although properly categorized as a Satin Finish proof, this is a remarkably vibrant specimen, with needle-sharp definition over the design elements. A swath of copper-orange patina provides a distinctive band of color on the obverse. (#3994)
- 282 1936 Type One—Satin Finish PR67 PCGS.** This Type One proof Buffalo nickel exhibits a razor-sharp strike that confirms its proof status. Interesting die lines extend across the bottoms and tops of 36 in the date, and may represent remnants of the rectangular punch device used to impress the date onto the die. Pleasing olive coloration is augmented by hints of speckled rose and sunset-orange patina. Impeccably preserved on both sides.
Ex: FUN Signature (Heritage, 1/2008), lot 828, which realized \$2,300. (#3994)
- 283 1937 PR65 PCGS. CAC.** A gleaming Gem representative of this popular issue, the last proof Buffalo nickel. Impressively textured with pale blue toning in the fields and a small flyspeck to the right of the neck. (#3996)
- 284 1937 PR65 PCGS.** This brilliant Gem proof yields mild field-motif variance at certain angles and is intricately struck. Some tiny, light flecks in the fields are visible under magnification. (#3996)
- 285 1937 PR67 NGC.** Incredible deep mirror fields surround the reflective devices on this brilliant Superb Gem proof. Both sides are entirely void of carbon flecks or other imperfections. NGC has only certified 35 finer examples, but few can match this piece for its exceptional eye appeal. (#3996)
- 286 1937 PR67 PCGS.** Fully struck and pristine, this Superb Gem displays a noticeable cameo effect on each side—even if not enough to warrant a Cameo designation on the holder. Entirely untuned with glassy “black” fields and frosted white devices. PCGS has only certified 11 finer examples (5/09). (#3996)

JEFFERSON NICKELS

Key 1950-D Nickel, MS67 Full Steps Ex: Omaha Bank Hoard

- 287 1950-D MS67 Full Steps NGC.** Ex: Omaha Bank Hoard. The 1950-D has a low mintage of 2.63 million pieces, but the issue is best known as the focal point of the roll-collecting boom, circa 1955 to 1964. Although Mint State rolls have been hoarded since its production, most examples lack the crisp strike and minimally marked surfaces of the present Superb Gem. Light blended pearl-gray and tan toning only adds to the eye appeal. This Full Steps specimen is many times more elusive than its non-Full Steps counterparts in this ultimate grade, the highest such at either NGC or PCGS. Census: 11 in 67 Full Steps, 0 finer (6/09).
From The Bay State Collection, Part One. (#84042)
- 288 1953-S MS64 Full Steps PCGS.** A rarity with Full Steps. This near-Gem example is lustrous and virtually untuned. While the reverse in general displays the soft detail characteristic of this issue, the steps of Monticello are surprisingly well defined and merit the designation. Only occasional flaws visit the surfaces. Population: 15 in 64 Full Steps, 2 finer (6/09). (#84051)

EARLY HALF DIMES

Pleasing 1795 Half Dime, V-4, LM-10, VF25

- 289 1795 VF25 PCGS. CAC.** V-4, LM-10, R.3. Digit 1 touches the curl, star 1 joins the tip of curl 2, and there is one outer berry between UN of UNITED. This later die state has developed a cud above TY and star 9. Pleasing medium gray patination embraces both sides, leaving the well defined devices just a shade or two lighter than the fields. A planchet lamination is visible in the left obverse quadrant. (#4251)

Near-Mint 1795 Half Dime, V-4, LM-10

- 290 1795 AU58 NGC. V-4, LM-10, R.3. Obverse star 1 is joined to the tip of hair curl 2; star 15 is joined to the tip of the bust. On the reverse, there are five berries left and five berries right. There is an outer berry between the bases of U and N in UNITED. This is a high quality survivor with a dense layer of electric-blue and rose-gray patina across both sides. Several adjustment marks are noticeable on the reverse: three or four on the eagle's torso and a lengthy horizontal one on the upper reverse field. A few wispy pinscratches are noted on the lower right side of the obverse, including one over Liberty's cheekbone. High point wear is relatively modest for the grade, and the design elements are well struck for such an early issue. (#4251)

Rare 1795 V-2, LM-3 Half Dime, MS61

- 291 1795 MS61 NGC. V-2, LM-3, R.5. A rare-variety 1795 Flowing Hair half dime from the device punch with seven hair curls. Gunmetal-blue toning does little to hide the bold design details on each side. Clear adjustment marks are visible along the left obverse border, with associated weakness on the reverse. (#4251)
- 292 1797 16 Stars PCGS Genuine. V-4, LM-2, R.4. The second most common variety among four different die pairs known for the date. Lightly scratched, but still a pleasing example with attractive surfaces and desirable lilac and gray toning.

Amazing 1801 V-1 and 2, LM-2 Half Dime, AU55

- 293 1801 AU55 NGC. V-1 and 2, LM-2, R.4. Daniel Valentine recorded two different die varieties, but today it is recognized that they are merely die states of a single marriage. Since Valentine was published, another 1801 variety was discovered, so today there are again two known varieties of the date. This amazing Choice AU example has bold details and excellent luster beneath the gray-brown surfaces. Although shy of the Condition Census, the present piece is far finer than most surviving examples. (#4267)

BUST HALF DIMES

Impressive 1829 V-3, LM-2 Half Dime, MS66

- 294 1829 MS66 NGC. V-3, LM-2, R.1. This Premium Gem has entirely untoned surfaces with fully brilliant luster on both sides. The obverse is prooflike and the reverse is frosty. Liberty's hair curls, the stars, and all individual details of the eagle are impressively defined. Census: 20 in 66, 5 finer for all 1829 varieties (6/09). (#4276)

Prized Gem 1834 Half Dime, V-1, LM-2

- 295 1834 MS65 PCGS. V-1, LM-2, R.1. The F in OF is repunched and entered low. A relatively available variety for the year, though at the Gem level any die pair becomes a rarity. This beautifully detailed piece is brightly lustrous and generally pale silver-gray, though the rims show a few glimpses of gold. Population: 29 in 65, 29 finer (6/09). (#4281)

Toned Gem 1834 Half Dime, V-1, LM-2

- 296 1834 MS65 NGC. V-1, LM-2, R.1. Later die state with a minor die crack from star 7 to Liberty's cap, and the upper loop of the second S is filled. Electric-blue, lavender, and golden-brown patina bathes the lustrous surfaces of this lovely Gem. Sharply struck and nicely preserved throughout. For all varieties, NGC has graded 43 finer examples (6/09). (#4281)

SEATED HALF DIMES

Popular No Stars, Large Date
Seated 1837 Half Dime MS66

- 297** 1837 No Stars, Large Date (Curl Top 1) MS66 NGC. Light gold toning enriches the borders of this highly lustrous and decisively struck Premium Gem. Essentially pristine aside from a delicate mark beneath the E in STATES. The sole Seated Liberty half dime date without stars, aside from a very scarce emission in 1838 at New Orleans. (#4311)

Superb Gem 1837 No Stars, Large Date
Seated Liberty Half Dime, V-2

- 298** 1837 No Stars, Large Date (Curl Top 1) MS67 NGC. V-2. The famous No Stars, Large Date variant. This piece displays deep, splendid toning in shades of russet and ice-blue near the rims on both sides. The strike is sharply executed aside from the dentils, and even the aid of a loupe fails to locate any abrasions. NGC has certified only two pieces finer, and there are none higher at PCGS (5/09). (#4311)
- 299** 1837 No Stars, Small Date (Flat Top 1) MS64 PCGS. Soft champagne-gold color shows up under magnification. The only softness apparent on the design elements occurs on the HA of HALF, which is typical for the issue. A few inoffensive marks on the lustrous surfaces preclude Gem classification. Population: 32 in 64, 27 finer (6/09). (#4312)
- 300** 1838 Large Stars, No Drapery MS65 NGC. CAC. Lustrous silver-gray surfaces display splashes of electric-blue and red, more so on the obverse. A sharply struck and minimally marked piece. (#4317)
- 301** 1838 Large Stars, No Drapery MS65 NGC. CAC. A shimmering lilac-gray Gem whose expertly struck devices and unabraded fields combine to provide exemplary eye appeal. The lower inner point of star 11 is repunched. (#4317)

Eliasberg's MS66 1838 Half Dime
Large Stars, No Drapery

- 302** 1838 Large Stars, No Drapery MS66 NGC. Ex: Eliasberg. Dappled golden-brown and stone-gray toning graces this lustrous and precisely struck Premium Gem. Clashed near the E in DIME, but essentially unabraded. The No Drapery, Stars subtype was only coined between 1838 and 1840. Listed as a Small Stars variety within the Eliasberg catalog, but we agree with Al Blythe that only V-1 and V-2 merit that designation. Census: 48 in 66, 28 finer (6/09). Ex: Louis E. Eliasberg, Sr. Collection (Bowers and Merena, 5/1996), lot 947. (#4317)

Impressive MS66 1839 No Drapery Half Dime

- 303** 1839 No Drapery MS66 NGC. Impressively struck with crisp definition on Liberty's head and all of the obverse stars. Flashy with only a hint of champagne patina along the lower left obverse rim. The otherwise silver-white surfaces are carefully preserved and exhibit sharply struck devices. Census: 18 in 66, 7 finer (6/09). (#4319)

Charming Premium Gem
1839 No Drapery Half Dime

- 304** 1839 No Drapery MS66 NGC. An outstanding Premium Gem survivor from this early Seated half dime issue, popular as one of a handful of No Drapery dates. It is strongly struck with impressive luster beneath dappled green-gray and blue patina. NGC has certified just seven numerically finer examples (6/09). (#4319)

Pleasing MS66 No Drapery 1839 Half Dime

- 305 1839 No Drapery MS66 NGC. V-1. Close, heavy digits in the date with an extra point on star 11. Typically bold with pale violet toning interspersed over both sides. The underlying surfaces are satiny and predictably smooth. Census: 18 in 66, 7 finer (6/09).
Ex: San Francisco ANA Signature (Heritage, 7/2005), lot 5770. (#4319)

Scarce 1840-O No Drapery Half Dime Medium O, V-2, MS62

- 306 1840-O No Drapery MS62 NGC. V-2, Medium O. Obverse stars 3 and 9 are recut. On the reverse, there is a die crack at U of UNITED that extends to the wreath. This example is one of few we have seen for this scarce to rare variety. The surfaces are satiny and clean, with sea-green, gold, and peach peripheral toning that is quite strong and highly attractive on the reverse. (#4322)
- 307 1842 MS66 NGC. CAC. Delightful golden-brown and aquamarine toning graces this lustrous and pinpoint-sharp Premium Gem. The obverse rim has a few interesting minor die breaks. Census: 6 in 66, 1 finer (5/09). (#4330)

Attractively Toned MS66 1848-O Half Dime

- 308 1848-O MS66 PCGS. V-2, Medium O. The date is bold, with all numerals touching the base. Stars 4 through 6 are recut, and the Medium O mintmark is high and centered. Splashes of yellow-green, forest-green, violet, and purple toning are scattered over the lustrous surfaces, and the design elements are sharply struck overall, except for the usual weakness in the upper left part of the wreath. Both sides are devoid of significant contact marks. Scarce in Mint State. Population: 10 in 66, 4 finer (6/09). (#4340)

Gorgeous Superb Gem 1851 Half Dime

- 309 1851 MS67 NGC. Light silver-gray overall with strong, swirling luster and above-average detail. What is most impressive about this Superb Gem is that its surfaces are essentially pristine, a rare state for any Seated half dime, much less a Stars Obverse example. Census: 4 in 67, 1 finer (6/09). (#4347)

Richly Toned 1853 No Arrows Half Dime, MS66

- 310 1853 No Arrows MS66 NGC. The striking details are exceptionally sharp, and there is no evidence of die clashing on either side. Both sides show semiprooflike fields and deep layers of electric-blue and golden-tan patina. The 1853 No Arrows half dime is scarce at all grade levels, from a low mintage of 135,000 pieces and heavily melted due to rising silver prices during the 1850s. Census: 9 in 66, 2 finer (5/09). (#4351)
- 311 1853 Arrows MS65 NGC. A mark-free and virtually stone-white Gem that exhibits good luster and excellent eye appeal. A briefly issued type coin. Struck from boldly clashed dies. (#4356)
- 312 1859 MS66 NGC. The lovely beige-silver surfaces of this Premium Gem are impeccably preserved and reveal excellent striking definition. Only the right side obverse stars are incomplete. A relatively unheralded one-year type: The obverse features hollow stars and a slightly different rendition of Liberty. The obverse hub would be again modified in 1860, to replace stars with statutory legends. Census: 20 in 66, 21 finer (6/09). (#4371)

Colorful 1860 Half Dime MS67

- 313 1860 MS67 PCGS. CAC. Dappled rose-red and apple-green embrace this mildly prooflike Superb Gem. Its preservation is impressive, and the strike is intricate aside from a few upper left cereal grains. Worthy of the finest Seated half dime collection, and housed in a green label holder. NGC and PCGS have combined to grade just nine numerically finer examples (6/09). (#4377)

314 1862 MS66 NGC. This frosty and lustrous Premium Gem has brilliant silver surfaces on both sides, with excellent design definition. The 1862 half dime was the last of the common date half dimes issued during the Civil War and Reconstruction eras. (#4381)

315 1864 MS64 Prooflike NGC. A lovely example of the scarce issue, from a mintage of only 48,000 coins. This fully prooflike near-Gem has brilliant surfaces with excellent eye appeal. Light die cracks, heavy clash marks, and weakness at the upper left branch of the wreath all attest to its status as a business strike. While NGC has certified 40 examples of the 1864 half dime, this piece is the only one to carry the Prooflike designation (5/09). (#4384)

Flashy MS66 Prooflike 1866 Half Dime

316 1866 MS66 Prooflike NGC. A stone-white Premium Gem with frosty devices and prominently reflective fields. The strike is exacting, and there is little indication of contact. Struck from clashed dies. Just 10,000 pieces were struck, since fractional currency followed Gresham's Law and drove silver from circulation. Census: 6 in 66 Prooflike, 1 finer as MS67 without a Prooflike designation (6/09). (#4388)

317 1867-S MS64 PCGS. This important rarity survives from a modest mintage of 120,000 coins, yet nearly all entered circulation. As a result, higher-Mint State coins are seldom encountered. The lightly toned surfaces are attractive and display excellent luster. Population: 13 in 64, 5 finer (5/09). (#4391)

318 1868-S MS64 NGC. Splotches of electric-blue, lavender, and beige-gold toning rest on the lustrous surfaces of this near-Gem. A few minute marks in the right obverse field deny Gem status. Census: 31 in 64, 24 finer (6/09). (#4393)

319 1869 MS65 PCGS. CAC. Strongly lustrous with light golden-tan tints over much of the centers. The peripheries are nearly brilliant, and the strike is bold. Population: 9 in 65, 12 finer (6/09). (#4394)

320 1870 MS66 PCGS. Dynamic luster sweeps the nearly immaculate fields and devices. The strike is unimprovable, and both sides have only a hint of golden toning. Population: 8 in 66, 4 finer (6/09). (#4396)

PROOF SEATED HALF DIMES

Seldom-Seen Gem Proof 1856 Half Dime

321 1856 PR65 NGC. The exact number of half dime proofs minted in 1856 is unknown, though Walter Breen in his *Encyclopedia of United States and Colonial Proof Coins* says there are "possibly 30 to 40 around." NGC and PCGS population figures more or less seem to corroborate Breen's estimate, as the two services have graded about 30 examples.

Deep bluish-purple toning dominates both sides of this Gem specimen, accented with orange, crimson, and yellow-gold. An exacting strike manifests itself in sharp definition on the design elements. Both faces appear nicely preserved. Census: 5 in 65, 5 finer (6/09). (#4434)

322 1862 PR66 Cameo NGC. CAC. A simply gorgeous specimen and the most attractive example of this Civil War issue that we have offered in recent years. Fully struck and impressively preserved, with lovely gold, rose, and electric-blue iridescence near the peripheries, and noteworthy cameo contrast on both sides. Census: 6 in 66 Cameo, 7 finer (6/09). (#84445)

323 1862 PR67 Cameo NGC. This splendid Superb Gem half dime is visually entrancing and technically impressive, as both sides display razor-sharp definition and intensely watery reflectivity in the fields. Trace amounts of die rust are noted on the figure of Seated Liberty, but post-strike defects are nonexistent. Census: 7 in 67 Cameo, 0 finer (6/09).

From The Bay State Collection, Part One. (#84445)

324 1863 PR66 NGC. Reflective fields highlight well struck, frosted design features. Both sides are essentially untoned and devoid of mentionable marks. Die polish lines are visible in the fields. From a proof mintage of 460 pieces. Census: 13 in 66, 5 finer (5/09). (#4446)

325 1867 PR66 Cameo NGC. Peripheral electric-blue and purple toning is more extensive and deeper on the reverse, ceding to light golden-brown in the centers of both sides. This is a well struck and nicely preserved piece. Census: 9 in 66 Cameo, 2 finer (6/09). (#84450)

326 1870 PR66 Cameo PCGS. CAC. A gorgeous Premium Gem proof, this little half dime has big eye appeal. The obverse displays iridescent rainbow toning that is more intense near the borders, while the reverse has central champagne toning with deeper gold around. Population: 4 in 66 Cameo, 2 finer (5/09). (#84453)

Coveted PR67 1873 Half Dime

- 327 **1873 PR67 NGC.** Final year of the half dime denomination. This is a spectacular proof example that is deeply mirrored. The surfaces display rich blue-violet centers with rose and yellow color around the margins. An essentially perfect example of this popular type coin. Census: 7 in 67, 0 finer (6/09). (#4456)
-

EARLY DIMES

1797 16 Stars Dime, JR-1, AU53

- 328 **1797 16 Stars AU53 ICG.** JR-1, R.4. There are 16 stars around the obverse periphery. Star 10 touches the Y in LIBERTY. About half of the obverse stars are noticeably repunched. The obverse has the usual die crack seen on nearly all examples, from the border through stars 2 and 1, the hair curl, tops of the 1 and 7, the lower edge of the drapery, and finally to the border below star 16. Minor die clashing is visible on both sides. Smoky violet-gray toning covers each side. A lightly worn and attractive example of this important early issue, with no distracting marks. (#4462)
-

Brilliant 1798 Large 8 Dime, JR-4, MS61

- 329 **1798 Large 8 MS61 PCGS.** JR-4, R.3. The Normal Date with a Five Berries reverse die. This lovely Mint State specimen is sharper than normal, with slight weakness along the right shield border. Both sides are brilliant and untuned, aside from barely perceptible wisps of champagne. Population: 3 in 61, 9 finer (6/09). (#4466)
-

- 330 **1803 VF25 ICG.** JR-4, R.5. A pleasing silver-brown 1803 dime with a few faint lines and abrasions consistent with the grade. The surfaces are smooth and the overall appearance is excellent. A late die state with a shattered reverse die. (#4473)
-

Sharp 1805 4 Berries Dime, JR-2, AU58 An Excellent Type Specimen

- 331 **1805 4 Berries AU58 NGC.** JR-2, R.2. The two 1805 varieties share a common obverse, while four berries on the branch attribute the JR-2. Semiluminous surfaces are toned medium gray and exhibit fairly strong detail. Both sides are quite clean for a coin that saw brief circulation. An excellent specimen for a high-grade type collection. (#4477)
-

BUST DIMES

Gem 1814 STATESOF Dime, JR-5

- 332 **1814 STATESOF MS65 NGC.** JR-5, R.3. The popular *Guide Book* STATESOF variety. A lustrous Gem with lovely golden-russet patina that deepens slightly toward the rims. No marks are readily apparent, and the strike is good despite some blending on Liberty's forehead curls and opposite near the fletchings. (#4490)
-

**Elegant Gem 1829 Dime
Large 10C, JR-2**

- 333 1829 Large 10C MS65 NGC. CAC. JR-2, R.2.** The reverse is notable for the large size of the denomination and the defective right foot of the 1 therein. This Gem offers excellent central detail and gorgeous luster beneath rich patina, largely forest-green with glimpses of gold, emerald, and sage. A marvelous survivor. (#94511)

Unblemished 1830/29 JR-4 Dime, MS64

- 334 1830/29 MS64 NGC. JR-4, R.2.** Sun-gold and olive-green embrace this semiprooflike near-Gem. Well struck and unblemished with excellent eye appeal. The underdate is subtle, although the ball of a 9 is visible as a bulge from the lower left portion of the loop of the O. Census: 3 in 64, 4 finer (6/09). (#4519)

Lovely 1836 JR-1 Dime, MS66

- 335 1836 MS66 NGC. CAC. JR-1, R.3.** The Fancy 8 date style is common to JR-1 and JR-2, while JR-3 has a Block 8 date style. This Premium Gem exhibits gold and lilac toning on the obverse, with a brilliant and untuned reverse. Virtually pristine surfaces are frosty and fully lustrous. Both sides have considerable rim crumbling. (#4528)

SEATED DIMES

**Scintillating MS66 1837 Seated Dime
No Stars, Large Date**

- 336 1837 No Stars, Large Date MS66 NGC.** Unlike its half dime counterpart, there is no mistaking the Small and Large Date varieties on the 1837 Seated dime. This lustrous Premium Gem has a whisper of gold toning across nearly flawless surfaces. Boldly impressed and desirable as a briefly coined design subtype. Census: 21 in 66, 7 finer (6/09). (#4561)

Attractive 1838 Partial Drapery Dime, MS64

- 337 1838 Partial Drapery MS64 NGC.** The “partial drapery” is actually a result of clashed dies, with a portion of the E from DIME from the reverse showing on the obverse and giving the appearance of a line of drapery (Brian Greer, 1992). Soft violet, lavender, and gold patination adorns the lustrous surfaces of this near-Gem specimen, and a well executed strike imparts sharp definition to the design elements. Some trivial marks barely preclude Gem classification. Census: 4 in 64, 7 finer (6/09). (#4570)

Bright 1839 No Drapery Dime, MS68

- 338 1839 No Drapery MS68 NGC.** Bright luster exudes from the impeccably preserved surfaces of this Superb Gem dime, and a well executed strike delivers sharp delineation to the design elements, except for some minor softness at portions of the rims. A few wisps of speckled tan show up under magnification. Census: 7 in 68, 0 finer (6/09). (#4571)

Fantastic MS67 1839-O No Drapery Dime

- 339 1839-O No Drapery MS67 NGC.** Large O. This early New Orleans dime issue of over 1.3 million pieces is relatively available in the circulated grades, though Mint State examples are elusive and only a handful of Superb Gem pieces have survived to the present day. This is one such example, an immensely lustrous MS67 beauty that offers exacting detail, unusual for an O-mint minor silver coin. Glimpses of peach and rose patina grace otherwise silver-white surfaces that are exquisitely preserved. A noteworthy and memorable representative that should find a home in an exclusive cabinet. Census: 2 in 67, 1 finer (6/09). (#4572)

Satiny Gem 1840 No Drapery Dime

- 340 1840 No Drapery MS65 NGC.** The Philadelphia Mint issued the No Drapery, Stars Obverse subtype of the Seated dime for only three years, 1838-1840. The 1840 emission boasts the lowest mintage of this trio, with 981,500 pieces produced, and, while somewhat available in lower grades, it is a prime rarity in Gem or better condition. The surfaces on this example exude a warm, satiny luster, and both sides display moderate, original autumn-brown and stone-gray toning. Distraction-free and appealing, this coin belongs in a high quality type set. Census: 12 in 65, 13 finer (5/09). (#4573)
- 341 1843 MS64 PCGS.** Impressively detailed with strongly lustrous surfaces that are essentially silver-white. Great eye appeal for the grade. Population: 14 in 64, 3 finer (5/09).(#4583)
- 342 1844 VF25 ANACS.** Violet, sky-blue, and golden-tan hues bathe both sides of this low mintage, key 1844 dime. Nicely detailed for the grade, including a sharp LIBERTY and associated scroll. A loupe reveals minor marks near the cap.(#4585)
- 343 1844 VF30 ANACS.** Medium intensity apple-green, purple, and violet-blue patination bathes both sides of this popular "Little Orphan Annie" representative, and comparatively strong detail is apparent on the design elements. A moderate linear mark is visible in the left obverse field.(#4585)
- 344 1844 VF35 ANACS.** Medium intensity electric-blue and purple toning concentrates at the borders, and occasional splashes of apricot visit the centers. Both sides are quite clean for a coin that has seen moderate circulation.(#4585)
- 345 1844 VF35 PCGS.** Dusky golden-gray and violet-blue patina is slightly deeper on the obverse of this nicely defined Choice VF specimen. A couple of ancient marks are noted on each side. Housed in a green label holder.(#4585)
- 346 1844 XF40 ANACS.** Golden-gray surfaces display splashes of electric-blue and purple and are devoid of significant contact marks. The design elements are evenly defined.(#4585)
- 347 1844—Cleaned—ANACS. AU Details, Net XF40.** Semibright surfaces are retoning deep blue and apricot in the fields and light blue and gold on the devices. This is a well defined piece that reveals a few small marks.(#4585)

**Popular 1844 Dime, AU53
The 'Little Orphan Annie'**

- 348 **1844 AU53 PCGS.** The relatively low mintage of 72,500 pieces led to promotional efforts by one Frank C. Ross, who nicknamed the 1844 Seated dime "Little Orphan Annie." Silver-gray surfaces imbued with splashes of bluish-violet exhibit well defined devices. Devoid of significant blemishes and housed in a green label holder. Population: 3 in 53, 10 finer (5/09). (#4585)

Noteworthy Near-Mint 1846 Dime

- 349 **1846 AU58 PCGS. CAC.** In *The Complete Guide to Liberty Seated Dimes*, Brian Greer writes of the 1846: "Fairly scarce in any grade and rare in XF and above. This is the lowest mintage Stars Obverse seated dime (excluding varieties)." With just 31,300 pieces struck, the 1846 dime has less than half the mintage of the more famous 1844 issue, the "Little Orphan Annie." This gorgeous near-Mint representative offers impressive luster with just a hint of friction on the high points. Elegant lavender, gold, and sea-green shadings grace each side, and marks are minimal. Population: 2 in 58, 2 finer (5/09). (#4588)

- 350 **1849 MS64 PCGS.** A lovely near-Gem, minimally toned save for hints of sky-blue and peach. It is well struck save for softness at certain peripheral elements on the right. Population: 7 in 64, 2 finer (5/09). (#4591)

Exemplary Patinated Gem 1849 Dime

- 351 **1849 MS65 NGC.** Dramatic forest-green, plum-red, and orange embrace the obverse. The reverse has similar but lighter shades. This satiny and precisely struck Gem is devoid of marks and is important in such exemplary condition. Many if not most 1849 dimes were melted by speculators to reclaim the bullion, shortly after they were struck. Census: 4 in 65, 3 finer (6/09). (#4591)

Exceptional MS67 1853 Arrows Dime

- 352 **1853 No Arrows MS67 PCGS. CAC.** This low-mintage type is scarce in all grades, and although it is occasionally seen in lower Mint State grades, Superb Gem examples are few and far between. This example possesses lustrous silver-gray surfaces with a layer of light champagne patina over each side. The design features are sharply impressed throughout. Certified in a green label holder. Population: 4 in 67, 4 finer (5/09).
Ex: San Francisco ANA Signature (Heritage, 7/2005), lot 5833. (#4599)

- 353 **1855 Arrows MS64 NGC.** Light gold patina displays lavender accents. Lustrous surfaces are well defined except for weakness in portions of the rims, and are devoid of mentionable marks. Census: 21 in 64, 14 finer (5/09). (#4607)

- 354 **1858 MS65 NGC.** Though the obverse of this minimally toned Gem shows pillowy detail, the reverse is sharp. The luster is soft and appealing. Census: 16 in 65, 11 finer (6/09). (#4616)

Bright MS66 ★ 1858 Seated Dime

- 355 1858 MS66 ★ NGC.** Both sides are noticeably flashy, although the faintly toned fields perhaps lack the reflectivity requisite for a Prooflike designation. A loupe reveals vertical die polish lines, as made, but marks are minimal and difficult to locate. Struck from moderately clashed dies. The sole business strike 1858 dime with a Star designation from NGC (6/09). (#4616)

Rare Premium Gem 1866 Dime

- 356 1866 MS66 NGC. CAC.** The 1866 dime is rare in circulation strike format; only 8,000 business strikes were made. This Premium Gem displays partially prooflike fields that yield a pleasant variance with the motifs. A decisive strike imparts sharpness to the design features, save for minor softness in the hair atop Liberty's head. Essentially untoned surfaces lack significant marks. Census: 6 in 66, 3 finer (6/09). (#4643)

Outstanding Prooflike Superb Gem 1869 Dime

- 357 1869 MS67 Prooflike NGC.** NGC has graded exactly four 1869 dimes as Superb Gems, including this piece, the *only* Prooflike example certified there (6/09). Both sides offer strong reflectivity in the fields, with contrasting frostiness on the devices. Light silver centers give way to hints of gold-orange near the rims. (#4649)

**Satiny Gem 1875-CC Dime
Mintmark Below Bow**

- 358 1875-CC Mintmark Below Bow MS65 PCGS. CAC.** Deep forest-green, dove-gray, and tan toning enriches this satiny Carson City type coin. Impressively free from abrasions, and the strike is crisp with only a hint of softness on Liberty's hair. The Mintmark Below Bow variant is somewhat more elusive in all grades than its Above Bow counterpart. Housed in an old green label holder. Population: 8 in 65, 1 finer (6/09). (#4674)
- 359 1876-CC MS66 NGC.** Type One Reverse. Fortin-116 with die doubling on the I in DIME. Lightly toned, smooth, and lustrous. Struck from long-lived dies that have orange-peel fields and a network of slender cracks along the reverse margin. Census: 20 in 66, 7 finer (5/09). (#4680)

Singular MS68 1877 Dime, Finest Certified

- 360 1877 MS68 NGC.** The lone finest 1877 dime Heritage has ever offered, unsurprising since this is the *only* MS68 survivor certified by either NGC or PCGS (5/09). This coin has wondrous eye appeal with silver-white surfaces that show occasional hints of sky-blue and gold. The luster of the fields is strong and shining, while the well-defined devices offer a softly frosted counterpoint. Its preservation is exemplary, as may be expected for the MS68 designation, with only a couple of minuscule reverse marks visible to the unaided eye. Struck from clashed dies, most evident on the left side of Liberty and within the wreath. (#4682)

Flashy MS65 ★ 1878-CC Dime

- 361 1878-CC MS65 ★ NGC.** Type One Reverse. Fortin-101. The E's in ONE DIME appear die-doubled. Decidedly prooflike, with flashy fields and frosted devices. Undoubtedly, the field reflectivity coaxed the elusive Star designation from NGC. A sharply struck and exceptionally clean Gem with faint gold toning. Census: two in 65 ★, one finer with a Star designation (5/09). (#4686)

- 362 1882 MS66 PCGS. CAC.** Fortin-105. The 2 in the date is obviously repunched within the upper loop. Brilliant and beautiful with potent luster and a few faint clash marks. A good strike despite the usual minor blending on the upper left portion of the wreath. Population: 28 in 66, 13 finer (6/09). (#4690)

Exceptional 1884 Ten Cent, MS67

- 363 1884 MS67 NGC.** The 1884 dime is a relatively common date, though it becomes challenging in the the better levels of Mint State. The lustrous surfaces of this Superb Gem display whispers of golden-tan, more so on the obverse. The design elements are better impressed than usual, though the hair atop Liberty's head is soft, as virtually always seen. Nicely preserved throughout. Census: 21 in 67, 5 finer (6/09). (#4692)
- 364 1891-O MS65 PCGS.** A delightful Gem, this is an elusive and underrated issue in MS65 or finer grades. Satiny surfaces and full luster shine through the rich and vibrant green-gold, pale blue, and light violet toning. Population: 16 in 65, 9 finer (6/09). (#4707)

PROOF SEATED DIMES

Elusive PR66 ★ Cameo 1859 Dime

- 365 1859 PR66 ★ Cameo NGC.** Stark field-to-device contrast is apparent on each side of this sharply struck, impressively preserved Premium Gem proof specimen. The surfaces are free of contact marks, with only microscopic hairlines noted on either side. An important date among type collectors, the 1859 is the final proof issue in the Stars Obverse Seated dime series. Census: 2 in 66 ★ Cameo, 1 finer as Cameo with a Star designation (6/09). (#84748)
- 366 1864 PR66 NGC.** Toned over the entire surface with mottled deep blue and russet. The mirror fields are clean but show a faint line or two in the left obverse. One of the finer-graded examples to emerge from the 470 struck during the waning days of the Civil War. Census: 10 in 66, 6 finer (6/09).
From The Bay State Collection, Part One. (#4757)

Gorgeous PR67 ★ 1866 Dime

- 367 **1866 PR67 ★ NGC.** Attractively patinated in rose-red, emerald-green, and sun-gold. Intricately struck and devoid of lint marks or abrasions. The date is lightly repunched near the first and final digits. Easily among the finest specimens extant from a mintage of 725 pieces. NGC has graded just two numerically finer examples (6/09). (#4759)
- 368 **1869 PR66 Cameo NGC.** A borderline Ultra Cameo specimen, this Premium Gem proof has exceptional contrast with brilliant silver surfaces. The deeply reflective fields set up a mirrored background for the frosted devices. There are no contact marks or other imperfections of any significance. Census: 9 in 66 Cameo, 1 finer (5/09). (#84762)
- 369 **1873 No Arrows, Closed 3 PR65 NGC.** Sharply struck design elements offer relatively strong contrast with the fields of this Gem proof dime. Splashes of sky-blue, violet, and beige-gold patina visit both sides, each of which is nicely preserved. Census: 25 in 65, 12 finer (6/09). (#4766)
- 370 **1876 PR64 Cameo PCGS.** Whispers of gold gravitate to the borders of this pleasing Cameo. Well struck, and revealing just a few minor handling marks. Population: 7 in 64 Cameo, 4 finer (5/09). (#84773)
- 371 **1878 PR64 Cameo PCGS.** Cobalt-blue, reddish-gold, and lavender colors visit both sides of this near-Gem proof, each of which exhibits crisply struck design features. A few inoffensive marks deny Gem status. Population: 9 in 64 Cameo, 6 finer (5/09). (#84775)
- 372 **1879 PR66 ★ NGC. CAC.** Electric-blue, purple, and gold-orange patina concentrates at the borders of this Premium Gem ★ proof dime. Sharply struck and minimally abraded. Census: 1 in 66 ★, 0 finer with Star (6/09). (#4776)

Captivating PR67 Cameo 1880 Dime

- 373 **1880 PR67 Cameo NGC.** Pleasingly contrasted with the light frost across the crisply detailed devices standing out from the gleaming, faintly silver-gray mirrors. A handful of tiny planchet flakes, a majority of them on the reverse, are of little technical or aesthetic concern. Great eye appeal for this highest-mintage proof Seated dime issue. Census: 15 in 67 Cameo, 1 finer (6/09). (#84777)
- 374 **1881 PR65 Cameo NGC.** The devices are heavily frosted and the fields display unusually deep, watery reflectivity. The light tan and grayish-gold coloration is attractive and obviously original. A crisply struck and well preserved Gem proof specimen. Census: 7 in 65 Cameo, 14 finer (6/09). (#84778)

- 375 **1882 PR66 Cameo NGC.** Wispy champagne toning accents the bold design elements of this Premium Gem Cameo proof Seated dime. Deeply mirrored fields frame the highly lustrous devices. Census: 17 in 66 Cameo, 16 finer (6/09). (#84779)
- 376 **1885 PR66 Cameo PCGS.** A fully brilliant Premium Gem Cameo proof, this Seated dime has exceptional eye appeal with hints of champagne toning, slightly heavier on the reverse. Population: 15 in 66 Cameo, 5 finer (6/09). (#84782)
- 377 **1887 PR67 Cameo NGC.** An amazing Superb Gem Cameo proof, this Seated dime has delightful rose, violet, and blue toning on both sides. Census: 6 in 67 Cameo, 0 finer (6/09). *From The Bay State Collection, Part One.* (#84784)
- 378 **1888 PR65 PCGS. CAC.** Rose-red and apple-green embrace this flashy Gem. A colorful and sharply impressed specimen. Only 832 proofs were issued. Population: 24 in 65, 17 finer (5/09). (#4785)

BARBER DIMES

- 379 **1898-O MS64 PCGS.** Regardless of the mintage, which exceeded 2 million coins, this date is elusive and highly desirable in any Mint State grade. The present specimen has frosty silver luster with light tan surfaces framed by deeper iridescent toning near the borders. Population: 13 in 64, 12 finer (5/09). (#4816)
- 380 **1903-S MS64 PCGS.** Crisply struck with nary a hint of weakness on any of the design elements. Mottled champagne, russet, and gold patina occupies each side. The carefully preserved surfaces are blemish-free. Population: 15 in 64, 20 finer (6/09). (#4832)
- 381 **1904 MS65 PCGS.** Medium intensity multicolored toning adorns the radiantly lustrous surfaces of this Gem, and a decisive strike lends crisp delineation to the design elements. A lint mark is visible on the chin. Population: 23 in 65, 8 finer (6/09). (#4833)

PROOF BARBER DIMES

- 382 **1893 PR66 Cameo NGC.** A stunning example of Charles Barber's design, this Premium Gem Cameo proof is entirely brilliant with fully mirrored fields surrounding frosty and highly lustrous devices. Census: 13 in 66 Cameo, 18 finer (6/09). (#84877)

Ultra Cameo PR66 1896 Dime

- 383 **1896 PR66 Ultra Cameo NGC.** A stone-white Premium Gem with icy devices and prominently mirrored fields. The strike is full, even on the cereal grains and forehead curls. The sole imperfection is a minute fleck after the F in OF. Only 762 proofs were coined. Census: 2 in 66 Ultra Cameo, 2 finer (6/09). (#94880)

Remarkable PR67 ★ Cameo 1897 Dime

- 384 1897 PR67 ★ Cameo NGC.** An outstanding Superb Gem specimen, decisively struck with rich frost over the devices and gleaming silver-white mirrors. Essentially untuned with virtually flawless surfaces save for a handful of tiny planchet flakes that have minimal influence on the eye appeal. NGC has graded four numerically finer examples (5/09). (#84881)

- 385 1898 PR65 Cameo NGC.** A splendid Cameo proof that has deeply mirrored fields and strongly contrasting, frosted devices. Each side has a layer of pale rose patina, and the surfaces show no obvious defects to the unaided eye. Census: 11 in 65 Cameo, 39 finer (6/09).(#84882)

MERCURY DIMES

- 386 1916-D Good 6 PCGS.** The 1916-D is eagerly sought out in all grades. This is a well-worn example, but the surfaces are original and uncleaned. Light patina is seen over each side, and there are a few minor field marks present.(#4906)

Luminous XF40 Details 1916-D Dime

- 387 1916-D—Damaged—ANACS. XF40 Details.** Soft gray-gold, silver, and crimson toning graces each side of this still-lustrous key-date dime. The obverse displays well, with only a shallow scrape on the neck as a significant concern, but on the reverse, a larger post-striking defect is present at the right side of the bands, as well as the fasces above and below. (#4906)

Coveted MS62 Full Bands 1916-D Dime

- 388 1916-D MS62 Full Bands PCGS.** Lightly toned and lustrous with a good strike. Both sides are smooth save for a thin mark on the back of the cap. The low mintage 1916-D has always been the key date of the series, but examples apparently circulated well into the 1920s, since most survivors are in VG or lower grades. Dealers such as Wayte Raymond managed to set aside a number of Uncirculated examples, although the pool is insufficient to meet collector demand. (#4907)

- 389 1916-S MS66 Full Bands PCGS.** The 1916-S is a popular issue as it is a first-year coin and it is relatively available in high grades. This is a lovely example that has pale, oil-slick iridescence over each side. The strike is strong throughout, as indicated by the Full Bands designation.(#4909)

Wonderful 1916-S Mercury Dime MS67 Full Bands

- 390 1916-S MS67 Full Bands NGC.** Crisply struck, with especially clear definition on the central reverse bands and just a touch of fadeaway noted on the tops of TE in STATES. Original gold and russet patina gathers near the peripheries and increases the overall visual appeal of the piece. Examples of this first-year Mercury dime issue from the San Francisco Mint are scarce at this grade level and unknown any finer (6/09). (#4909)

- 391 1917-D MS66 NGC.** Localized cobalt-blue, lavender, and reddish-gold patina shows on the highly lustrous surfaces of this Premium Gem, and a well executed strike imparts strong definition to the design elements. A few trivial marks are visible on the reverse. Census: 6 in 66, 1 finer (5/09).(#4912)

Charming Gem Full Bands 1917-D Dime

- 392 **1917-D MS65 Full Bands PCGS.** A silver-gray, frosty example that exhibits full, original mint bloom. Just a couple of tiny marks to the right of the fasces do not take away from the quality of this Mercury dime. The 1917-D is elusive in Gem Full Bands and decidedly rare any finer; PCGS has graded only six such pieces (6/09). (#4913)

- 393 **1917-S MS66 Full Bands PCGS.** Ex: Larry Shapiro. White and lustrous, with a splash of dark gold toning on the reverse tucked in along the right side of the fasces and branch, with traces on Liberty's cap as well. Clean surfaces throughout and attractive. Population: 62 in 66 Full Bands, 10 finer (6/09). (#4915)

- 394 **1918 MS66 Full Bands PCGS.** This otherwise readily obtainable P-mint issue is infrequently offered with smooth, placid surfaces. A no-questions Premium Gem, this powerfully struck example displays razor-sharp definition from the rims to the central devices. Delicately patinated with a rich endowment of mint luster, this piece is one of the finer survivors. Although PCGS reports four MS67 Full Bands examples (6/09), we doubt whether those coins can compare favorably to the present specimen in terms of aesthetic appeal. (#4917)

Stunning Gem Full Bands 1918-D Dime

- 395 **1918-D MS65 Full Bands NGC.** Even though more than 22 million pieces were struck, the 1918-D is generally acknowledged today as the most challenging strike rarity in the Mercury dime series, probably as a result of hurried wartime production. Gems are elusive and often plagued by peripheral weakness, which is accompanied by indistinct central bands on all but a few of the Uncirculated population. This piece is a notable exception. Its design elements are sharply struck throughout, not just on the bands. The surfaces have soft, glowing luster and are nearly untoned, except for a whisper of gold color in limited areas. Census: 8 in 65 Full Bands, 1 finer (6/09).

From The Bay State Collection, Part One. (#4919)

Toned 1919-D Dime, MS64 Full Bands

- 396 **1919-D MS64 Full Bands PCGS.** CAC. Boldly struck with a pair of peripheral die cracks noted on the obverse, at 11:30 and 3 o'clock. Lovely apricot-gray toning adorns both sides, and a mixture of additional colors decorates the lower reverse. A pleasing, high-end example for the grade. Population: 67 in 64 Full Bands, 17 finer (5/09). (#4925)

Desirable 1919-D Dime, MS64 Full Bands

- 397 **1919-D MS64 Full Bands PCGS.** The 1919-D is a seldom-seen issue in most grades. In near-Gem Full Bands condition, it is considered very scarce. This piece has the fine, mattelike texture so often seen on coins of all denominations from the decade. Lustrous surfaces display traces of gold-tan toning, especially on the reverse. A few minute marks on the fasces define the grade, and a couple of interesting die cracks are noted on the obverse periphery. Population: 67 in 64 Full Bands, 17 finer (6/09). (#4925)

Amazing MS65 Full Bands 1920-S Dime

- 398 **1920-S MS65 Full Bands PCGS.** Ex: Larry Shapiro. Unlike most 1920-S dimes, this piece shows no fading of the final digit 0 into the rim. Lange notes that specimens having both full bands and a sharp date are rare. This example has frosty mint luster that radiates from both sides. Perusal with a loupe reveals a few ticks on the neck and fasces, a couple of small toning spots on the obverse, and a handful of similar areas on the reverse. The details are full in the center but a bit soft through STATES. Population: 25 in 65 Full Bands, 10 finer (6/09). (#4933)

- 399 **1921 AU58 ICG.** Silver-white surfaces exhibit nicely struck design elements, including the middle bands that show relatively strong, though not complete, separation. The few minute marks are consistent with a coin having seen brief circulation. (#4934)

Elusive MS66 Full Bands 1921 Dime

- 400 1921 MS66 Full Bands NGC.** The bourses at typical small- to mid-sized coin shows are usually rife with examples of 1921 and 1921-D Mercury dimes in AG to VG condition. But examples of those dates in quality Mint State are seldom encountered. Heavy silver dollar production in 1921 caused low mintage of Mercury dimes, which nonetheless were little saved.

The present example has brilliant silver surfaces thickly coated with an even layer of deep mint frost. The superior mint luster is a nice accompaniment to the strike, which extends beyond the split central bands on the reverse to encompass the diagonals as well. Census: 23 in 66 Full Bands, 4 finer (5/09). (#4935)

Delightful MS66 Full Bands 1921 Dime

- 401 1921 MS66 Full Bands PCGS.** Ex: Starr. An exquisite, sharply detailed example of this popular issue, with delicate, dappled violet toning in the peripheral areas. Only a handful of tiny, isolated marks appear in the reverse fields. The 1921 has long been popular as a semi-key issue, and Full Bands examples are especially in demand. PCGS has graded just two finer Full Bands coins (6/09). (#4935)
-

Pleasing MS65 Full Bands 1921-D Dime

- 402 1921-D MS65 Full Bands PCGS.** The 1921-D is one of the most challenging issues in the Mercury dime series. This Full Bands Gem is untoned and possesses beautiful satiny mint luster that exudes from near-pristine surfaces. Indeed, close inspection with a glass reveals no significant marks, just a hard-to-see luster graze or two on the neck. The design features are well struck, though the tops of some of the letters along the right obverse border are a tad soft. PCGS has graded 15 finer Full Bands coins (6/09). (#4937)
-

- 403 1923 MS67 Full Bands NGC.** Magnificent frosty luster embraces this Superb Gem, and a well-executed strike culminates in Full Bands. Untoned, impeccably preserved surfaces reveal a die polish area to the upper right of the neck and die polish lines in the reverse fields. Census: 26 in 67 Full Bands, 1 finer (5/09). (#4939)

- 404 1924 MS67 Full Bands PCGS.** Ex: Scheppman Collection. The luster on this delightful piece is bright and softly frosted. Each side shows just a touch of light golden, sky-blue, and lilac toning. Despite its reputation as an available issue, this is actually one of the more difficult P-mints from the series at the Superb Gem level, as demonstrated by a lack of finer representatives in the PCGS Population Report (6/09). (#4943)
-

Stunning MS68 Full Bands 1924 Dime

- 405 1924 MS68 Full Bands NGC.** Though Heritage has offered an assortment of MS65 to MS67 Full Bands examples of this popular Philadelphia issue, this MS68 Full Bands coin, one of just two graded by NGC with none certified by PCGS (5/09), is our first. Exquisite detail and frosty silver-gray surfaces combine with virtually flawless preservation for maximum eye appeal. (#4943)
-

- 406 1924-D MS65 Full Bands PCGS.** Lush forest-green, rose-red, and dove-gray endow this sharply struck and highly lustrous Gem. The fields appear essentially immaculate. The date is lightly strike doubled. (#4945)
-

Wonderful MS66 Full Bands 1925-S Dime

- 407 1925-S MS66 Full Bands PCGS.** Essentially untoned and brilliant with bright, coruscating luster. The design elements are sharply struck, and the satiny surfaces are virtually devoid of mentionable marks. Conditionally rare at the MS66 level with Full Bands. Population: 16 in 66 Full Bands, 4 finer (6/09). (#4953)
-

- 408 1926 MS66 Full Bands PCGS.** Remarkable quality with few peers, this Premium Gem Mercury dime is fully detailed with pristine surfaces. Medium gold toning is accented with peripheral iridescence. Population: 74 in 66 Full Bands, 15 finer (6/09). (#4955)
-

Intriguing MS65 Full Bands 1926-S Dime

- 409 1926-S MS65 Full Bands PCGS.** Lange's *Complete Guide to Mercury Dimes* states that a "full bands gem of this date is easily among the most difficult coins in the entire series to locate." This coin offers brilliant, frosty surfaces on both sides. Die rust is seen on the central part of the fasces, which confuses the view of the split on the central bands. Population: 21 in 65 Full Bands, 16 finer (6/09). (#4959)

Elegant MS66 Full Bands 1928-S Dime

- 410 1928-S MS66 Full Bands PCGS.** The 1928-S is another in the long series of Mercury dime strike rarities from the 1920s, but this well-defined and lustrous dime offers brilliant surfaces throughout. Carefully preserved, as one would expect from this lofty grade, this is a pleasing representative of this conditionally challenging issue. Population: 29 in 66 Full Bands, 7 finer (6/09). (#4971)
- 411 1929 MS67 Full Bands PCGS.** Glimpses of champagne-gold and ice-blue adorn the lustrous surfaces of this Superb Gem. Sharply struck design elements culminate in Full Bands. A nicely preserved piece. Population: 49 in 67 Full Bands, 0 finer (5/09). (#4973)
- 412 1929 MS67 Full Bands PCGS.** A brilliant and flashy Superb Gem with virtually flawless surfaces and a needle-sharp strike. A few hints of gold color are visible in the reverse fields. The luster this piece exhibits is incredible. Population: 49 in 67 Full Bands, 0 finer (5/09). (#4973)

Original 1929-D Dime, MS67 Full Bands

- 413 1929-D MS67 Full Bands PCGS.** A condition rarity that is seldom seen in this lofty grade, and a great coin for the date collector. Toned with a light hazy blush that tends toward gold on each side. The strike is sharp throughout, with each device and letter clear. Close examination with a loupe will note a faint line at the top of Liberty's cap, and a couple of trivial die cracks trace down the wing and upper portion of the cap. Population: 30 in 67 Full Bands, 1 finer (6/09). (#4975)

Astounding MS67 Full Bands 1930-S Dime

- 414 1930-S MS67 Full Bands PCGS.** This low-mintage issue was only released in 1934-35, by which time the mintage was widely known and pieces were quickly snapped up by collectors and speculators, according to David Lange. Mint State survivors are common, but Superb Gems are not, particularly with Full Bands. This coin is highly lustrous and boldly struck save for slight softness on the reverse peripheral letters. It is essentially flawless save for a minor coin-to-coin mark directly above the I of DIME. The surfaces are bright and display the usual S-mint frost with a hint of apricot toning to the left of Liberty's face. Population: 9 in 67 Full Bands, 0 finer (6/09). (#4981)

Stunning 1931 Dime, MS67 Full Bands

- 415 1931 MS67 Full Bands PCGS.** Ex: Larry Shapiro. Blinding luster blazes forth from the untuned fields, and the devices are sharply struck. Virtually perfect surfaces show just a few tiny ticks acquired since it was coined. Outstanding eye appeal in all respects. Population: 11 in 67 Full Bands, 0 finer (6/09). (#4983)
- 416 1931-S MS65 Full Bands PCGS.** Splashes of olive-green, lilac, and golden-orange visit the gleaming surfaces of this sharply struck Gem. A few small marks are scattered over each side. Population: 52 in 65 Full Bands, 43 finer (5/09). (#4987)

Stunning MS66 Full Bands 1931-S Dime

- 417 1931-S MS66 Full Bands PCGS.** This S-mint beauty offers bright luster over luscious silver-gold surfaces. It is beautifully struck and shows no mentionable distractions. The 1931-S is a popular semikey issue in the Mercury dime series and one that, despite widespread hoarding in the 1930s and 1940s, is seldom found with strong central definition. Population: 37 in 66 Full Bands, 6 finer (6/09). (#4987)

Bright 1935-D Dime, MS67 Full Bands

- 418 1935-D MS67 Full Bands PCGS.** Bright luster exudes from both sides of this Superb Gem, each of which reveals a few splashes of light golden-tan patina, and an exacting strike delivers crisp delineation to the design features. A few minuscule, grade-consistent marks occur on the reverse. This date can be located through MS65 with little difficulty, but anything finer is elusive. Population: 21 in 67 Full Bands, 0 finer (5/09). (#4995)

MS68 Full Bands 1937-D Dime

- 419 1937-D MS68 Full Bands PCGS. CAC.** Beautifully toned in tan-gold, powder-blue, and orange with the deepest shades near the rims. Lustrous, crisply struck, and essentially immaculate. Outstanding eye appeal for this Great Depression Denver issue. Population: 12 in 68 Full Bands, 0 finer (5/09). (#5007)
- 420 1942/1-D AU58 NGC.** Light champagne and medium gold toning subdues the lustrous surfaces of this pleasing near-Mint overdate. The 1942/1 and 1942/1-D Mercury dimes are both doubled dies, created with the use of a 1941-dated hub followed by a 1942-dated hub. (#5040)
- 421 1942/1-D AU58 PCGS. CAC.** Just a touch of rub is noted on the high points. This luminous example has generally pale silver-gray surfaces with glimpses of gold and charcoal close to the devices. Population: 44 in 58, 4 finer (6/09). (#5040)

- 422 1944 MS67 Full Bands PCGS.** This shining Superb Gem is brilliant and shows bold detail. Only a few minuscule flaws come between this piece and perfection. Tied with 69 other pieces as second finest Full Bands pieces certified by PCGS, and only surpassed by one coin (6/09). (#5051)

- 423 1944-D MS68 Full Bands PCGS.** Pale golden patina is seen around the margins, along with an occasional russet or jade-green freckle. This undisturbed Superb Gem has razor-sharp centers and only a hint of peripheral striking weakness. Population: 76 in 68 Full Bands, 0 finer (6/09). (#5053)

PROOF MERCURY DIMES

Patinated PR67 1936 Dime

- 424 1936 PR67 NGC.** Speckled apple-green and fire-red invigorates the obverse, although the reverse is only minimally toned. The strike is needle-sharp. Proof Mercury dimes were only struck between 1936 and 1942, and the 1936 has the lowest mintage of the proof type. Census: 79 in 67, 2 finer (6/09). (#5071)

Lovely High Grade 1939 Dime PR68

- 425 1939 PR68 NGC.** A marvelous specimen with absolutely razor-sharp striking definition on all design elements, as always expected but not always achieved on a proof coin. There is a faint layer of milkiness across the obverse and reverse fields, but it does little to obscure the glassy reflectivity in the fields. A slight degree of coral-gold toning near the peripheries improves the overall eye appeal. Census: 65 in 68, 0 finer (6/09). (#5074)

Exquisite 1939 Dime, PR67 Cameo

- 426 **1939 PR67 Cameo NGC.** The 1939 proof dime enjoys a high survival rate in the better grades, as evidenced by the several thousand certified by NGC and PCGS. Cameo coins such as this Superb Gem, however, are much more difficult to locate. Essentially untoned surfaces are nearly blemish-free and crisply struck. Census: 10 in 67 Cameo, 1 finer (5/09). (#85074)
- 427 **1940 PR68 NGC.** Only a single example has been certified at a higher numeric grade. This Superb Gem is fully brilliant with incredible eye appeal. Census: 39 in 68, 1 finer (6/09). (#5075)
- 428 **1942 PR68 NGC.** Brilliant surfaces are immaculately preserved. The design elements are crisply struck throughout. (#5077)

PROOF ROOSEVELT DIMES

- 429 **1951 PR69 Cameo NGC.** Essentially untoned and virtually perfect with moderate contrast evident on each side. One of just seven Cameo coins certified at this level by NGC, with none finer (6/09). *From The Bay State Collection, Part One.* (#85226)
- 430 **Five-Piece NGC-Certified 1970-S Proof Set Including No S Dime.** The centerpiece of the lot is the 1970-S No S dime PR68 Cameo NGC, beautifully preserved with considerable contrast. Also included are the 1970-S Large Date cent PR67 Red Cameo NGC, the 1970-S nickel PR68 NGC, the 1970-S quarter PR68 NGC, and the 1970-S half PR66 NGC. (Total: 5 coins)
- 431 **1983 No S PR69 Deep Cameo PCGS.** A nearly perfect proof dime from one of the few No S proof sets issued in 1983. Both sides have incredible contrast, fully brilliant nickel-gray surfaces, lustrous devices, and deeply mirrored fields. Population: 70 in 69 Deep Cameo, 0 finer (6/09). *From The Bay State Collection, Part One.* (#95265)

TWENTY CENT PIECES

Eye-Appealing, Semiprooflike MS65 1875 Twenty Cent Piece

- 432 **1875 MS65 NGC.** This gorgeous Gem has fully brilliant silver surfaces with no toning on either side. The surfaces are smooth, pleasing, and almost abrasion-free. Additionally, the fields are bright and semireflective, a trait often seen on twenty cent pieces and one that adds considerably to the coin's eye appeal. Most twenty cent pieces were struck in San Francisco, while the Philadelphia Mint only coined 36,910 business strikes in 1875. Census: 21 in 65, 12 finer (5/09). (#5296)

Popular 1875-S Twenty Cent MS65

- 433 **1875-S MS65 NGC.** Caramel-gold and aquamarine enrich this boldly struck Gem silver type coin. Luster dominates both sides, which are smooth aside from a solitary hair-thin mark on the right obverse field. LIBERTY is raised on the shield, the edge is plain, and the eagle faces the other way, yet in commerce the similar-sized denomination was often confused with a quarter. (#5298)

PROOF TWENTY CENT PIECES

Gorgeous PR65 Cameo 1876 Twenty Cent

- 434 **1876 PR65 Cameo NGC.** The second of only four proof twenty cent issues and the last one to have an accompanying business strike. This delightful Gem displays a strong cameo effect. Each side is delightfully contrasted, with only subtle hints of gold and white patina in the fields. Census: 21 in 65 Cameo, 14 finer (6/09). (#85304)

**Impressive 1876 Twenty Cent Piece
PR63 Deep Cameo**

- 435 1876 PR63 Deep Cameo ICG.** The extreme intensity of the cameo contrast this specimen exhibits is the result of absolutely “black,” deeply watery fields surrounding ice-white, richly frosted devices. Sharply struck throughout, with occasional puffs of cloudiness in the fields that seemingly limit the numeric grade level. (#95304)

Exquisite PR66 1878 Twenty Cent

- 436 1878 PR66 NGC.** The short-lived twenty cent piece experiment ended with a whimper: just 600 proofs dated 1878, the second proof-only year for the denomination. This remarkable Premium Gem offers excellent eye appeal and preservation for the issue. Each side shows considerable contrast, though the pale silver-gray toning over the reverse fields likely contributed to this coin not gaining a Cameo designation. (#5306)

PR64 Deep Cameo 1878 Twenty Cent

- 437 1878 PR64 Deep Cameo PCGS.** This proof twenty cent issue is not particularly scarce in non-Cameo grades, and there are 176 examples certified as PR64 by NGC and PCGS together (6/09). Deep Cameo pieces are rare, however, and only three specimens have been so graded at PCGS. This example displays opaque fields with practically illimitable reflectivity, while the devices are nicely frosted. A few wispy hairlines preclude an even finer numerical grade. Population: 2 in 64 Deep Cameo, 1 finer (6/09). (#95306)

EARLY QUARTERS

One-Year-Type 1796 Quarter, B-2, VF25

- 438 1796 VF25 PCGS.** B-2, R.3. On this variety, the 6 in the date is high and nearly touches the bust; the T and Y of LIBERTY are separate at the top; and the lower right star is spaced farther from the bust than star 1 is from the curl. One of only two varieties, B-2 is moderately more available than B-1. That said, both varieties are subjected to extremely heavy demand from early type collectors, as the 1796 quarter is a one-year design type.

Splashes of bluish-violet and lavender patination grace the light gray surfaces of this VF25 example. The design elements display nice detail despite moderate wear, and the dentilation is quite bold as is typical for the type. A few ancient, shallow linear marks on the right obverse are undistracting. This piece will fit comfortably in a mid- to high-grade type set. (#5310)

Appealing 1796 B-2 Quarter, VF35

- 439 1796 VF35 PCGS. B-2, R.3. The variety with the high 6, nearly touching the drapery, is more plentiful than the low 6 variety, although neither variety is seen with any frequency. As the first year of issue for the denomination and the only year for the Small Eagle reverse design type, this issue receives extraordinary demand from type collectors on top of its importance to date and variety collectors.

The example offered here is remarkable for its preservation. It is finer than usually encountered, and incredibly, exhibits no problems other than the usual minor hairlines and abrasions received from circulation. The silver-gray fields darken to steel-gray near the borders, with lighter gray devices. Traces of pale blue and iridescent toning add to its eye appeal. (#5310)

Scarce 1804 B-1 Quarter, Good 4 Details

- 440 1804—Scratched—ANACS. Good 4 Details. B-1, R.4. The first emission of the Draped Bust, Heraldic Eagle design combination and hard to locate, regardless of grade. The scratches are nothing more than heavy hairlines, some new, but most blended into the surface and virtually invisible. (#5312)

Pleasing 1804 B-1 Quarter, VF35 Details

- 441 1804—Cleaned—ANACS. VF35 Details. B-1, R.4. This wonderful piece has pleasing light silver surfaces with traces of peripheral iridescence. It has excellent details and considerable luster, especially for the grade assigned. A thin scratch on the reverse is easy to overlook. (#5312)

Choice AU 1805 Quarter, B-3

- 442 1805 AU55 PCGS. B-3, R.1. The usual die state with prominent clash marks and various slender die cracks. Rich forest-green, tobacco-brown, and ocean-blue embrace this briefly circulated Bust quarter. Luster shimmers across the borders, and neither side has any obvious marks. An important early silver type coin. Population: 18 in 55, 34 finer (5/09). (#5313)

BUST QUARTERS

Delightful B-2 1818 Quarter, MS65

- 443** 1818 MS65 NGC. B-2, R.1. Intermediate between the fourth and fifth obverse die states outlined in *Early United States Quarters 1796-1838* by Steve M. Tompkins; the obverse has just one die crack perpendicular to the main die crack, the one going above Liberty's cap to the rim and not the one descending to the cap. The reverse is in the last state identified, with a die crack through the arrows. This Gem is impressively lustrous, with hints of rose and peach toning over otherwise silver-white surfaces. It is well struck and pleasingly preserved with great eye appeal. (#5322)

Lustrous 1819 B-2 Quarter, AU55

- 444** 1819 Large 9 AU55 NGC. B-2, R.3. Tompkins Die State 3/1. The devices and borders are bathed with luster, and the virtually untoned surfaces lack any consequential marks. Sharply struck for the type with slight wear on the claws and curls. A few specks of debris are present near the E in AMERICA. The obverse periphery has several slender die cracks, as made. (#5326)

- 445** 1821 AU58 NGC. B-4, R.3. A satiny representative of this scarce variety, with muted luster and nearly complete remaining design detail on both sides. Dark specks cling to some of the devices, and there are subtle hairlines in the fields. (#5331)
- 446** 1821 AU58 NGC. B-3, R.2. Tompkins Die State 2/1. Ocean-blue and plum-mauve envelop this well defined and partly lustrous representative. Undisturbed aside from a tiny obverse rim nick at 8:30. Clashed beneath Liberty's ear, and minor die rust is present beneath UNUM, all as made. Census: 18 in 58, 53 finer (6/09). (#5331)

Choice Small Letters 1831 Quarter, B-4

- 447** 1831 Small Letters MS64 PCGS. B-4, R.1. A repunched 5 in the denomination aids identification. Only a glimpse of tan patina accompanies this precisely struck and lustrous near-Gem. A strong lens reveals only trivial contact. A wonderful type coin from the Age of Jackson. Population: 55 in 64, 20 finer (6/09). (#5348)
- 448** 1834 AU58 PCGS. B-1, R.1. The first star is distant from the bust, and on the reverse, the period is absent after the C in the denomination. A crack below star 1 curves across the bust, through the hair and star 13 to the rim. Another runs from the rim through the 8 in the date and the tops of 34. Another crack goes from the cap to the rim. This well struck piece displays considerable luster on silver-tan surfaces. A few minor marks are undistracting. (#5353)

SEATED QUARTERS

Conditionally Rare 1843 Seated Quarter, MS65

- 449** 1843 MS65 NGC. Emerald-green embraces the borders, while the centers are golden-brown with tinges of fire-red. This satiny Gem has a pleasing strike, and is free from any consequential marks. The 1843 is scarce in Mint State, and Gems are both rare and desirable. Census: 3 in 65, 1 finer (6/09). (#5404)

Appealing XF 1849-O Quarter

- 450 **1849-O XF40 PCGS.** Though the New Orleans Mint records show no figure for quarter production dated 1849, a variety of numismatic scholars have concluded that the pieces likely were struck in early 1850 in an appreciable quantity. This XF example has subtle remnants of luster in the fields, which are toned blue, rose-orange, and sunset-gold. The worn high points are pale silver-gray. Population: 5 in 40, 10 finer (5/09). (#5414)

- 451 **1852-O VF30 ANACS.** This O-mint quarter is from an original mintage of 96,000 pieces and is scarce in all grades. Medium-gray with olive and sky-blue undertones. Pleasing detail for the assigned grade. A few minor marks are found on the right obverse field. Ex: Professor Wayne Newman Palmer Collection, Part One (Heritage, 7/2004), lot 6099, which realized \$891.25. (#5420)

Elegant Choice 1853 Arrows and Rays Quarter

- 452 **1853 Arrows and Rays MS64 PCGS.** A dusky silver-gray type coin with a good strike and no relevant marks. The weight of the half dime through half dollar was reduced in 1853 to return the denominations to circulation. Arrows and rays were added to distinguish the new-tenor quarters and halves from earlier 1853 strikes, though the latter feature was dropped for the 1854 and later issues. Ex: Charlotte ANA Signature (Heritage, 3/2007), lot 636, which realized \$4,025. (#5426)

- 453 **1854 Arrows MS64 PCGS.** A snazzy-looking example with amazingly crisp definition on every design element, including the denticles, and subtle, satiny mint luster across each side. Essentially unabraded, save for a few insignificant marks, with scattered splashes of charcoal and golden-brown patina that occur on both obverse and reverse. Population: 64 in 64, 21 finer (6/09). (#5432)

- 454 **1854 Arrows MS64 PCGS. CAC.** A pleasingly detailed example of this popular type issue, softly lustrous and well-preserved beneath rich patina. Pale silver-blue centers give way to green-gold, orange, and olive shadings near the rims. Excellent eye appeal. PCGS has certified just 21 finer examples (6/09). (#5432)

Desirable Choice VF 1854-O Huge O Quarter

- 455 **1854-O Huge O VF35 NGC.** FS-501, formerly FS-004. Briggs 1-A, the only known dies. This coin's wear is even across both sides and leaves suitable details on all major design elements. The surfaces exhibit pleasing sandy-gray patina and show few abrasions. The mintmark, which is this coin's most prominent feature, is visibly misshapen and dominates the entire lower reverse. The diagnostic die cracks are also readily evident despite moderate, even wear. A great Choice VF example of this coveted variant. (#5434)

Richly Toned MS65 1856 Seated Quarter

- 456 **1856 MS65 NGC.** Beautiful reddish-orange toning dominates each side, although the upper reverse also offers cream-gray and electric-blue. Luster shimmers across the minimally marked fields. Nicely struck overall, with blending of detail seen on the fletchings, hair, and upper stars. Encapsulated in a prior generation holder. Census: 12 in 65, 4 finer (5/09). (#5438)

Magnificent MS67 ★ 1857 Quarter

- 457 **1857 MS67 ★ NGC.** Splashes of electric-blue and orange-gold dominate this shimmering and carefully preserved Superb Gem. The stars and denticles are needle-sharp, although the arrow fletchings and Liberty's chest shows moderate incompleteness of strike. Both sides show considerable field reflectivity. Struck from clashed dies. Even though the 1857 quarter dollar is considered available, Superb Gems are seldom encountered. Only two MS67 ★ pieces have been certified by NGC with only one (non-Star) finer (6/09). Ex: Central States Signature (Heritage, 5/2005), lot 6861, which realized \$8,050. (#5442)

- 458 **1857-O MS62 PCGS.** Pleasingly reflective luster with bands of green-gold toning gracing otherwise pale silver-gray surfaces. Small, scattered marks are present, but the eye appeal is strong for this antebellum quarter issue. Population: 5 in 62, 11 finer (5/09). (#5443)

Gleaming Premium Gem 1858 Quarter

- 459 **1858 MS66 NGC.** With its brightly lustrous and scarcely toned surfaces so beautifully preserved, this well struck coin has the appearance of an even finer grade. Considerable mint frost graces the figure of the eagle. Despite a mintage of over 7.3 million pieces, NGC has graded only two numerically finer examples (6/09). (#5445)

Difficult 1864-S Quarter, AU50

- 460 **1864-S AU50 ANACS.** In a series replete with rarities, the 1864-S stands out as one of the most difficult San Francisco Seated quarters regardless of grade. This olive-gold and sage example presents well despite light wear. There are no significant abrasions, and the devices remain crisp. One of just 20,000 pieces coined. (#5460)
- 461 **1868 MS63 ANACS.** Delicate gold, rose, and plum toning embraces parts of each side, while the rest of this Select piece is silver-gray. Strongly appealing and minimally abraded for the grade. (#5472)

Desirable Fine Details 1870-CC Quarter

- 462 **1870-CC—Improperly Cleaned—NCS. Fine Details.** A readily collectible representative of this famously challenging first-year Carson City quarter issue. The present example, while cleaned, probably long ago, retains a pleasing level of definition for a Fine details grade, with all letters of LIBERTY sharp. There are no singularly mentionable flaws, and the eye appeal is considerable for a coin that is housed in an NCS holder. (#5477)

- 463 **1872-CC PCGS Genuine.** PCGS code 98 for "damage," although the scattered marks are individually tiny. Possibly whizzed, and suspiciously toned charcoal-gray. Remaining design detail is considerable. Only 22,850 pieces were struck, and only two examples have been certified above the AU55 level. (#5482)

- 464 **1874-S Arrows MS60 PCGS.** Splashes of light olive-green patina are seen on both sides of this S-mint quarter, each of which exhibits well struck devices. Marks are surprisingly minimal. Housed in a first generation holder.
Ex: Nevada Collection of Seated Quarters (Heritage, 9/2008), lot 1540, which realized \$1,150. (#5495)

- 465 **1874-S Arrows MS64 PCGS.** A remarkable example of the 1874-S quarter, from a modest mintage of 392,000 coins. Like many similar Seated quarter issues, this date is hard to locate in top quality, although it is obtainable with a little diligence and patience. This example has brilliant and lustrous untuned silver surfaces and sharp design features. (#5495)

- 466 **1876 MS65 PCGS. CAC.** Type Two Reverse. A gorgeously toned offering with subtle shades of champagne-gray, sea-green, and antique-gold over well preserved surfaces. Boldly struck overall, even if a little weak on Liberty's head and some of the obverse stars. Nearly blemish-free. Population: 38 in 65, 25 finer (6/09). (#5501)

- 467 **1876-S MS65 PCGS. CAC.** Type Two Reverse. Original fire-red, apple-green, and dove-gray patina embraces this lustrous and splendidly preserved Gem. Two interesting die scratches (as made) cross Liberty's shield and chest. Population: 22 in 65, 3 finer (6/09). (#5503)

Magnificent 1876-S Quarter, MS66

- 468 **1876-S MS66 PCGS. CAC.** The 1876-S is available through the near-Gem level of preservation. Gems become more challenging, and MS66 pieces are elusive. Neither PCGS nor NGC has graded any specimens higher. Frosty, essentially untuned surfaces exhibit sharply struck design features. A few trivial marks fail to detract from the coin's overall magnificent eye appeal. Population: 3 in 66, 0 finer (6/09). (#5503)

Memorable MS67 1877-CC Quarter

- 469 1877-CC MS67 PCGS. CAC.** In 1877, the fabled Carson City Mint produced a near-record 4.2 million quarters, second in quantity only to the 4.9 million pieces for the Centennial-year issue. Accordingly, collectors desiring a CC-mint quarter for type sets usually select either the 1876-CC or 1877-CC quarters to fulfill that purpose. The 1877-CC quarter production would be the Nevada facility's last million-plus-coin quarter emission, as the introduction of the Morgan or "Bland" silver dollar in the following year would reduce the manufacture of other silver coins to token levels in order to accommodate the flood of new cartwheels.

This splendid Superb Gem offers stunning, original amber-gold and cinnamon coloration on the obverse, with the reverse boasting peripheral tinges of ice-blue that contrast with lilac centers. Despite the moderate intensity of the colors, there is much luster radiating forth, producing a visual treat and a coin of exceptional beauty. Housed in an old green label holder. Population: 6 in 67, 0 finer (5/09). (#5505)

- 470 1878 MS64 PCGS.** This brilliant piece has fully lustrous silver surfaces with a hint of champagne toning along the obverse border. The obverse has frosty luster and the reverse has satiny luster. Slight central weakness is noted on each side. From a plentiful mintage exceeding 2.2 million pieces, although far down from the Centennial high of almost 18 million: Silver dollars were the focus this year. Population: 20 in 64, 15 finer (5/09). (#5508)

- 471 1878 MS64 PCGS.** Rich orange-gold, cherry-red, and apple-green toning adorns this shimmering and well struck near-Gem. Lower mintage than the 1875 to 1877 Philadelphia issues, probably due to the resumption of silver dollar production. Population: 20 in 64, 15 finer (5/09). (#5508)

Gorgeous Prooflike MS66 1879 Quarter

- 472 1879 MS66 Prooflike NGC.** As with many other low-mintage issues of the late 19th century, the 1879 quarter has a significant percentage of reflective survivors. Few of those coins, though, can boast the eye appeal of this Prooflike Premium Gem. Sharply struck devices accompany the nearly immaculate fields. A minimally toned beauty. (#5511)

Peripherally Toned MS68 ★ 1879 Seated Quarter

- 473 1879 MS68 ★ NGC.** Here it is, the single finest NGC-graded business strike 1879 quarter. While five pieces have attained the lofty grade of MS68 from NGC, only the present Superb Gem also possesses a Star designation (6/09). Undoubtedly, the coveted Star was awarded for its lovely peripheral autumn-gold, navy-blue, and plum-red toning. Only 13,600 pieces were struck. (#5511)

Splendid MS68 1880 Quarter Tied for Finest Certified

- 474 1880 MS68 NGC.** A total of 13,600 quarter dollar business strikes were produced in 1880, a fair number of which have survived through the Premium Gem level of preservation. However, at this grade level, few remain. In fact, only three other pieces have been certified as MS68 (all by NGC), and, unsurprisingly, none are finer (6/09).

This specimen is a remarkable survivor that could fit equally well in a high-end date or type set. The surfaces are lightly toned and pristine beneath layers of sea-green, lavender, golden-brown, and aqua on the obverse, with gold-orange, purple, and aqua on the reverse. Semiprooflike fields establish mild contrast with the lightly frosted devices. The strike is crisp throughout. (#5512)

- 475 1887 MS64 PCGS.** Both sides of this enticing low-mintage quarter (10,000 business strikes) offer powerful luster. The boldly impressed eagle sports delightful frost as well. Nicely preserved throughout, and housed in a green label holder. Population: 22 in 64, 42 finer (6/09). (#5519)

Delightful 1887 Seated Quarter, MS66

- 476 1887 MS66 NGC. CAC.** An extraordinary and elusive Premium Gem Mint State specimen, with fully brilliant and entirely untoned silver surfaces. Both sides have bold design motifs. The fields are satiny and reflective, while the devices are frosty and lustrous. A delightful example that is seldom encountered so fine. Census: 14 in 66, 12 finer (6/09). (#5519)

Lovely Superb Gem 1891 Quarter

- 477 1891 MS67 NGC.** The final Philadelphia Seated quarter issue has a mintage of over 3.9 million pieces, and enough Mint State examples exist to satisfy collector demand at most levels. Superb Gems, however, are condition rarities. This gorgeous example offers booming luster beneath toning that is translucent save for a patch of dusty rose to the right of Liberty. Sea-green and blue patina dominates, with the former prevailing on the obverse, the latter on the reverse. Census: 14 in 67, 1 finer (6/09). (#5524)
- 478 1891-O XF45 ANACS.** A luminous Choice XF representative of this final O-mint Seated quarter issue, deeply toned blue-violet with green-gold tints at the margins and silver-gray at the worn zones. Faintly abraded and strongly appealing. (#5525)

PROOF SEATED QUARTERS

Important PR65 Cameo 1855 Quarter
Ex: Pittman

- 479 1855 PR65 Cameo NGC.** An outstanding specimen of this rare, low-mintage Arrows, No Motto proof date. Hints of pale green and rose patina grace attractively mirrored fields, and the devices are pleasingly frosted, if a trifle softly struck on certain stars and arrowheads, as David Akers noted in his cataloging of the lot. The roughly rectangular strike-through that passes through the top of the eagle's right (facing) wing is the most prominent pedigree marker on this piece, and one that is easily visible in the plate in the Pittman catalog.
Ex: George Earle Collection, lot 3102; Wayte Raymond (2/1947), lot 408; John Jay Pittman Collection, Part Two (5/1998), lot 1330. (#85551)

Stunning 1859 Seated Quarter, PR66

- 480 **1859 PR66 NGC.** A stunning Premium Gem with rich gold toning on the obverse and deeper lilac and bluish-green on the reverse. The fields beneath the toning are deeply mirrored, and the design motifs are fully defined. Few survivors can equal the quality of this delightful piece. Census: 13 in 66, 4 finer (6/09). (#5555)

- 481 **1860 PR66 NGC.** The rich patina across each side of this carefully preserved pre-Civil War Premium Gem presents a study in contrasts. The obverse has light aqua peripheral toning around a blue-green center, while the reverse shows more typical rose and orange in the center, framed by sapphire shadings. Census: 7 in 66, 1 finer (6/09).
From The Bay State Collection, Part One. (#5556)

Colorful Choice Proof 1862 Quarter

- 482 **1862 PR64 PCGS.** Vivid apple-green, ruby-red, and maroon toning dominates this lovely near-Gem. The fields are prominently reflective, and the strike is needle-sharp, even on Liberty's hair and the eagle's ankles. Only 550 proofs were struck for this Civil War date. Population: 35 in 64, 19 finer (6/09). (#5558)

Attractive 1862 Quarter, PR64 Cameo

- 483 **1862 PR64 Cameo NGC.** Larry Briggs (1991) writes that 120 of the 550 proof quarters struck in 1862 were melted. Both sides of this near-Gem are essentially color-free and present sharp field-motif contrast. A few inoffensive wispy marks preclude Gem status. Quite attractive overall. Census: 4 in 64 Cameo, 11 finer (6/09). (#85558)

- 484 **1864 PR66 Cameo NGC.** Due to the demands of hoarders during the Civil War, silver and gold coins, including proofs, had limited mintages. An impressive Premium Gem proof with exceptional cameo contrast beneath amazing sea-green and violet toning at the obverse, lighter gold around the reverse. Census: 3 in 66 Cameo, 1 finer (6/09).
From The Bay State Collection, Part One. (#85560)

- 485 **1865 PR64 PCGS.** Swirling iridescent shades of golden-brown, honey-gold, and powder-blue embrace this boldly struck near-Gem. A small toning spot is noted between the eagle's right wing and the S of STATES. A mere 500 proofs were struck of this popular Civil War date. Population: 35 in 64, 18 finer (6/09).
Ex: New York Signature (Heritage, 6/2005), lot 5522. (#5561)

Multicolored 1868 Quarter, PR66

- 486 **1868 PR66 NGC.** Coin production was hindered by the Civil War, and it would take several years before mintages would increase to antebellum levels. Only 29,400 quarters were struck in 1868 plus an additional 600 proofs. All proofs of this issue feature repunching at the top of the 1 in the date, the short die crack between ER in LIBERTY, and the large die lump below the bottom of the B in LIBERTY. Dramatic shades of blue, violet, and rose toning cover both sides of this deeply mirrored specimen. An attractive representative of this low-mintage issue. Census: 11 in 66, 0 finer (6/09).
From The Bay State Collection, Part One. (#5567)

- 487 **1874 Arrows PR64 NGC.** Multicolored toning on the reverse of this near-Gem proof cedes to deeper hues of the same color palette on the obverse. Consequently, the reflectivity of the obverse fields is subdued, while that of the reverse nicely accentuates the devices. This is a well struck piece, with just a few minor marks. (#5575)

- 488 **1875 PR65 NGC. CAC.** Gunmetal-blue and purple toning covers both sides of this Gem proof, with peripheral gold-orange joining in on the reverse. Sharply struck, moderately frosted design elements stand out against the reflective fields. Nicely preserved throughout and revealing great overall appeal. Census: 18 in 65, 15 finer (6/09). (#5576)

Exquisite 1880 Quarter, PR67 Cameo

- 489 **1880 PR67 Cameo NGC.** A total of 1,460 proof quarters were minted in 1880, of which 1,355 were delivered in the sets, the remaining 105 melted as unsold (Walter Breen, 1989). Stunning cameo contrast shows on this Superb Gem. This is an impeccably preserved, impressively struck untoned piece. Census: 15 in 67 Cameo, 6 finer (6/09). (#85581)

490 1882 PR63 Cameo NGC. A strongly reflective Select specimen with a crisp strike. Both sides show pleasing contrast, though that of the reverse is bolder. Light hairlines and contact marks in the fields account for the grade. (#85583)

491 1884 PR67 Cameo NGC. The frosted motifs provide obvious contrast with the glassy fields. This essentially brilliant Superb Gem is intricately struck and splendidly preserved. Only 875 proofs and 8,000 business strikes were coined, since the Philadelphia Mint concentrated on silver dollar production in 1884. Census: 9 in 67 Cameo, 3 finer (6/09).

From The Bay State Collection, Part One. (#85585)

Formidable PR68 1886 Quarter

492 1886 PR68 NGC. Iridescent swaths of honey-gold, rose-red, and ocean-blue embrace this fully struck and pristine Superb Gem. Memorable for its preservation in addition to its diverse patina. Among the finest specimens from the surviving low mintage of 886 proofs and 5,000 business strikes. Census: 3 in 68, 0 finer (6/09). (#5587)

Beautiful 1887 Quarter, PR66

493 1887 PR66 NGC. Beautifully toned, if a trifle more softly struck than the norm, particularly on the stars. Watery mirrors offer gorgeous reflectivity at the sea-green margins on each side. The central obverse cedes to aquamarine and violet, while gold-orange is prevalent on the reverse. Census: 35 in 66, 12 finer (6/09). (#5588)

Richly Toned PR67 1887 Quarter

494 1887 PR67 NGC. Though this later proof Seated quarter is exquisitely preserved, it is not the condition of this specimen that first catches the eye, but rather its rich, slightly dusky patina. Under a light source, bold blue, violet, and orange shadings come alive. Decisively detailed and all-around gorgeous. Census: 11 in 67, 1 finer (6/09). (#5588)

White-on-Black PR68 ★ Cameo 1890 Seated Quarter

495 1890 PR68 ★ Cameo NGC. Ice-white devices and mirrored fields appear to merit an Ultra Cameo designation, although NGC has instead bestowed a Star. This was likely awarded because the specimen is fully brilliant. The strike is precise aside from the star centers, and extensive evaluation is required to locate even trivial surface imperfections. A scant 590 proofs were struck, in addition to a mere 80,000 business strikes. Mintages were low since the Mint was busy producing millions of silver dollars that sat unwanted in Treasury vaults. Census: 1 in 68 ★ Cameo, 1 finer (6/09). (#85591)

Stunning PR66 Cameo 1891 Quarter

496 1891 PR66 Cameo NGC. A captivating and crisply contrasted Premium Gem specimen of the last proof Seated quarter issue. Both sides are minimally toned, and the rich frost blanketing the well-defined devices stands out from the gleaming silver-white of the mirrors. Undeniably appealing. Census: 21 in 66 Cameo, 10 finer (6/09). (#85592)

BARBER QUARTERS

- 497 1900 MS66 PCGS.** Type One Obverse, Type Two Reverse. Frosty silver-gray surfaces give off a lustrous glow on both sides, and there are only a couple of tiny contact marks near Liberty's headband that apparently separate this coin from an even finer grade. The strike is full, even on the often-weak right shield corner. For a mintage exceeding 10 million coins, Premium Gems of this issue are far scarcer than expected. Population: 12 in 66, 3 finer (6/09). (#5625)

Lustrous 1901-O Quarter, MS65

- 498 1901-O MS65 PCGS.** The lustrous surfaces of this Gem O-mint display splashes of violet, olive-green, and light tan. Relatively sharp definition shows on most of the design elements, except for the usual softness on the upper right corner of the shield. There are no marks of significant consequence. Population: 5 in 65, 5 finer (6/09). (#5629)

Vibrant 1907-O Quarter MS66

- 499 1907-O MS66 PCGS.** Dappled golden-brown and jade-green toning enriches most of this lustrous Premium Gem, although portions of the nearly immaculate reverse remain brilliant. The obverse has only occasional delicate grazes. Unexpectedly well struck for its New Orleans origin. Population: 8 in 66, 5 finer (6/09). (#5647)

- 500 1908-D MS65 PCGS. CAC.** Warm gold-orange and cool blue-green shadings mingle on each side of this lustrous Gem. Well-defined save for softness on the eagle's talons and beautifully preserved. Population: 19 in 65, 11 finer (5/09). (#5650)

- 501 1908-D MS65 PCGS.** The reverse is brilliant, while the obverse shows a lovely partial coating of pale lilac. An impressive and well preserved Gem example, with minimal marks and generally solid striking definition. Population: 19 in 65, 11 finer (6/09). (#5650)

- 502 1914-D MS66 PCGS.** Boldly struck with satiny surfaces that reveal slight reflectivity in the fields. Both sides show even, light gold-gray toning, and surface marks are virtually nonexistent. Population: 8 in 66, 2 finer (6/09). (#5668)

Tantalizing MS67 1916 Barber Quarter

- 503 1916 MS67 PCGS. CAC.** This is a nearly flawless example of the last Philadelphia Mint Barber quarter issue, frosty under a layer of reddish-gold patina. A boldly executed strike delivers virtually complete definition to the design elements. The coin's Superb Gem status is immediately and clearly evident. Those who collect transitional issues would be hard-pressed to locate a comparable 1916 Barber. Population: 3 in 67, 0 finer (5/09). (#5673)

PROOF BARBER QUARTERS

Flashy PR66 Cameo 1892 Quarter

- 504 1892 PR66 Cameo NGC.** Type Two Reverse. The long reign of the Seated designs ended in 1892, and collectors snapped up proofs of the new Barber series. Quarter proof mintages were the highest since 1880, when Trade dollars were offered only in proof format. This is a faintly toned and razor-sharp Premium Gem that provides obvious white-on-black distinction. Census: 24 in 66 Cameo, 20 finer (5/09). (#85678)

Fantastic PR67 ★ 1895 Quarter

- 505 1895 PR67 ★ NGC.** Razor-sharp striking detail and rich, variegated toning are hallmarks of this conditionally elusive proof Barber quarter. Beneath the deep patina the fields remain glassy and highly reflective. Only 880 pieces were produced, and Superb Gems are very scarce. Census: three in 67 ★, none finer with the Star designation (6/09). (#5681)

White PR67 Ultra Cameo 1896 Quarter

- 506 1896 PR67 Ultra Cameo NGC.** A brilliant Superb Gem whose thickly frosted devices and legends provide pleasing contrast with the darkly reflective fields. The fletchings and shield corners offer full definition, and a finer specimen can hardly be imagined. Only 762 proofs were issued. Census: 11 in 67 Ultra Cameo, 15 finer (6/09). (#95682)

- 507 1897 PR66 Cameo NGC.** The silver-white surfaces of this early proof Barber quarter show not the slightest hint of patina, for those who prefer their coins untuned, although there is a suggestion of powder-gray in the obverse field. The field-device contrast is marvelous on both sides, particularly deep on the reverse. Census: 14 in 66 Cameo, 15 finer (6/09). (#85683)

Exquisite PR68 1898 Quarter

- 508 1898 PR68 NGC. CAC.** An exquisitely preserved, dramatically toned Superb Gem with both sides showing hints of contrast through the patina. The obverse is sharply divided between the green-gold color of the upper right half and the blue, violet, and orange shadings present at lower left, while the reverse is concentrically toned with light blue-green at the rims with a fade through cerulean and violet to a pale peach center. Census: 19 in 68, 1 finer (6/09). (#5684)

- 509 1898 PR64 Cameo PCGS.** A veneer of faint champagne color adheres to both sides of this stunning Cameo, and a well executed strike emboldens the design elements. Light wispy marks deny Gem status. Population: 10 in 64 Cameo, 25 finer (6/09). (#85684)

Magnificent PR68 Cameo 1898 Quarter

- 510 1898 PR68 Cameo NGC.** This is a remarkable Superb Gem Ultra Cameo proof with amazing contrast. The devices on both sides are sharply defined. In fact, there appears to be no evidence of design weakness on either side. The surfaces are fully brilliant, with snow-white color and no toning. The fields are deeply reflective, and the mirrors serve to present the lustrous devices to full advantage. This amazing proof represents near-unimprovable quality. Census: 8 in 68 Cameo, 2 finer (6/09).

Ex: Long Beach Signature (Heritage, 2/2005), lot 6643, which realized \$10,925. (#85684)

Incredible PR67 Deep Cameo 1898 Quarter

- 511 1898 PR67 Deep Cameo PCGS.** Luminous golden toning adds to the appeal of this Superb Gem Deep Cameo proof quarter. Easily one of the most appealing survivors from the mintage of just 735 proof quarters in 1898, despite the presence of higher-grade coins. Examples with such a high degree of contrast between the devices and the fields are extremely desirable and invariably hotly contested at auction. Population: 13 in 67 Deep Cameo, 5 finer (6/09). *From The Bay State Collection, Part One. (#95684)*

- 512 1900 PR64 NGC. CAC.** Type One Obverse, Type Two Reverse. Peripheral golden-red toning gradually cedes to pearl-gray centers. Meticulously struck and undisturbed. A scant 912 proofs were issued. (#5686)

Stunning PR67 Cameo 1900 Quarter

- 513 1900 PR67 Cameo NGC.** A gorgeous specimen of this turn-of-the-century issue, among the last before the brilliant-and-matte era of antique U.S. proof coinage. The rich frost across the boldly impressed central devices is undimmed by the dappled gold, rose, and blue-green color across each side. Profoundly mirrored and beautiful. Census: 15 in 67 Cameo, 4 finer (6/09). (#85686)

Singular PR68 Ultra Cameo 1903 Quarter

- 514 1903 PR68 Ultra Cameo NGC.** An astounding quarter from after the Mint's changeover to a brilliant proof striking process, this is the *only* Ultra Cameo specimen for the date certified by NGC (6/09), and its PR68 grade speaks of its high all-around quality. It is profoundly contrasted, minimally toned, and nearly perfect to the unaided eye.

From The Bay State Collection, Part One. (#95689)

- 515 1907 PR65 PCGS.** Whispers of light gold appear on this Gem proof and a well executed strike brings out strong delineation on the design elements. This is a nicely preserved specimen that resides in a green label holder. Population: 17 in 65, 25 finer (6/09). (#5693)

- 516 1907 PR66 Cameo PCGS.** A remarkably high grade specimen, this piece shows the great depths of watery reflectivity in the fields that is most often seen on modern issues. Sharply struck and contact-free, with shining white frosted devices and jet-black fields. A small degree of cloudiness in the fields prevents an even loftier grade designation. Population: 11 in 66 Cameo, 5 finer (6/09). (#85693)

- 517 1910 PR66 PCGS.** This colorful Premium Gem shows a subtle blend of honey-gold, blue, and green, and similar shadings appear on the dappled reverse. Boldly detailed with a handful of tiny planchet flaws on the cheek. Just 551 proofs were coined. Population: 15 in 66, 21 finer (6/09).

From The Bay State Collection, Part One. (#5696)

Delightful PR66 ★ 1911 Quarter

- 518 1911 PR66 ★ NGC.** Beautiful golden-brown, powder-blue, and plum-red patina ensures the coveted Star designation. The reverse toning is also attractive, and features aquamarine and pastel magenta shades. A razor-sharp strike contributes further to the eye appeal. A mere 543 proofs were struck. (#5697)

STANDING LIBERTY QUARTERS

Original, Key-Date Standing Liberty 1916 Quarter Good 4

- 519 1916 Good 4 PCGS.** The date shows, albeit weakly, but the remaining design elements are nicely outlined. The rims are sharp and all letters of IN GOD WE TRUST show. Both sides display natural light silver-gray patina, and each is remarkably clean for a coin that has seen extensive circulation. A few old inoffensive toned-over pinscratches are mentioned for complete accuracy. This key-date representative will be a nice, though low grade, addition to a collection of Standing Liberty quarters. (#5704)

Desirable 1916 Standing Liberty Quarter, VF30

- 520 1916 VF30 PCGS.** The 1916 has the lowest reported mintage (52,000 pieces) in the Standing Liberty quarter series. This VF30 survivor displays a blend of soft golden-gray and powder-blue patina. The design elements are well-defined for the grade and issue, including a relatively strong date. A few hair-thin marks do not disturb. This pleasing midrange example is housed in a green-label holder. (#5704)

Sharp 1916 Standing Liberty Quarter, AU53

- 521 1916 AU53 NGC.** Dusky reddish-gray toning graces each side of this key-date representative, accented with occasional whispers of deeper gray. Despite some localized softness, excellent detail characterizes most of the design elements. The surfaces are remarkably clean for a coin that saw brief circulation. A nice-looking piece that will fit comfortably in a high-grade Standing Liberty quarter collection. (#5704)

Popular 1916 Standing Liberty Quarter, AU55

- 522** 1916—Cleaned—ANACS. AU55 Details. A wonderful representative of the highly popular and elusive 1916 Standing Liberty quarter, this example has nearly full luster with light gray-gold toning. There is no obvious evidence that this piece has been cleaned. No hairlines are found on either side, and the surfaces are lightly toned. (#5704)

Important 1916 Standing Liberty Quarter Near-Gem With Full Head

- 523** 1916 MS64 Full Head NGC. CAC. As the key to the Standing Liberty quarter series, the 1916 is prized in any grade, but high-grade survivors add another layer of complexity as numismatists scrutinize Liberty's head details. The graders at NGC came away satisfied, awarding this well struck near-Gem example a Full Head designation. Both sides are attractively lustrous, though the peach-gold toning covering most of the obverse appears only as a faint echo on the reverse. A handful of small abrasions on each side combine to account for the grade. NGC has certified 66 numerically finer Full Head coins (6/09). (#5705)

- 524** 1917 Type One MS66 Full Head PCGS. CAC. Delicate sky-blue and lavender elements grace otherwise silver-white surfaces. This well-defined Premium Gem is ideal for a similarly graded 20th century type set. (#5707)

Immaculate 1917-D Type One Quarter, MS67

- 525** 1917-D Type One MS67 NGC. Though a touch of weakness on Liberty's head precludes a Full Head designation, this brilliant example is well-defined elsewhere. Marvelous preservation with eye appeal to match for this often-overlooked Denver Standing Liberty quarter issue. Census: 2 in 67, 0 finer (5/09). (#5708)

- 526** 1917-D Type Two MS64 Full Head NGC. Splashes of olive-green, crimson, forest-green, and gold-tan concentrate at the margins of this highly lustrous near-Gem. Sharply struck and revealing just a few ticks that preclude Gem status. Encapsulated in a prior generation holder. Census: 73 in 64 Full Head, 34 finer (6/09). (#5717)

Elusive 1917-D Type Two Quarter MS65 Full Head

- 527** 1917-D Type Two MS65 Full Head PCGS. The Type Two issues are notably more elusive than their Type One counterparts in Full Head Mint State, particularly the mintmarked ones. This Gem is impressively detailed with subtle gold-orange tints over parts of the otherwise silver-white surfaces. Gleaming luster throughout. Population: 54 in 65 Full Head, 17 finer (6/09). (#5717)

Conditionally Scarce Gem Full Head 1917-D
Standing Liberty Quarter, Type Two

- 528 **1917-D Type Two MS65 Full Head NGC.** A lovely coating of sea-green and mauve toning covers each side of this conditionally scarce Type Two Gem from the Denver Mint. Few coins from this second-year type have survived in such fine condition. Well struck and boldly defined on Liberty's head; two or three of the shield rivets are weak, along with the eagle's breast and wing feathers. The surfaces are lustrous and blemish-free. Census: 27 in 65 Full Head, 7 finer (6/09). (#5717)

- 529 **1918-S MS63 Full Head NGC.** Soft golden-gray patina is accented with whispers of purple at the obverse margins. Lustrous surfaces exhibit well struck design features, except for typical softness in the two rivets near the abdomen. A few minute marks limit the grade. (#5725)

- 530 **1918/7-S VG8 ANACS.** FS-101, formerly FS-008.5. The flat top of the 8 and its broad upper right side indicate the rare overdate. Toned chestnut-brown and ice-blue. An unmarked and attractive example of this key variety. (#5726)

- 531 **1920 MS66 PCGS.** The lustrous surfaces of this Premium Gem are virtually untoned and nicely preserved. A sharp strike characterizes the design features, including the rivets and vertical stripes of the shield. (#5734)

- 532 **1924-S MS62 Full Head PCGS.** The luster is impressive for an MS62 coin, and the surfaces also show a light bit of golden toning. A scarce issue with Full Head detail. (#5751)

Important MS66 Full Head 1926-S Quarter

- 533 **1926-S MS66 Full Head NGC.** The 1926-S quarter, sporting a mintage of 2.7 million pieces, is among the most weakly struck of all San Francisco coins in the 1920s. Indeed, J.H. Cline, in his fourth edition of *Standing Liberty Quarters*, estimates that 1% or less were struck with Full Heads. This Premium Gem is among the few. Strong definition is apparent on the chain mail and stars as well, though two or three of the lower rivets reveal the usual weakness. Vibrant luster invigorates both sides, each of which is color-free and impeccably preserved. Die polish lines are visible in the fields, especially on the reverse. Great technical quality and aesthetic appeal. Census: 4 in 66 Full Head, 0 finer (6/09). (#5759)

- 534 **1927 MS66 Full Head PCGS. CAC.** A stunning Premium Gem with exceptional design definition, as the Full Head designation suggests. The surfaces have light champagne toning, deepening near the borders, with frosty underlying luster. Population: 46 in 66 Full Head, 5 finer (5/09). (#5761)

Delightful 1927-D Quarter, MS65 Full Head

- 535 1927-D MS65 Full Head PCGS.** Though hardly as notorious as its S-mint counterpart, the 1927-D is the second most elusive of the Type Three Standing Liberty quarters, particularly in Mint State. This suitably impressed Gem has pleasing luster beneath hazy blue-gray patina. Small spots of crimson toning appear intermittently at the periphery. Of interest is a die crack that passes through Liberty's head. Population: 68 in 65 Full Head, 13 finer (6/09). (#5763)

- 536 1928-S MS67 NGC.** Bright luster radiates from silver-white surfaces that are seemingly unblemished. Sharply struck, including virtually complete delineation in the vertical shield lines. Census: 18 in 67, 0 finer (5/09). (#5770)

Exceptional MS67 Full Head 1928-S Quarter

- 537 1928-S MS67 Full Head NGC. CAC.** Light gold toning enriches this thoroughly lustrous Superb Gem. Remarkably close to pristine, and the head and date are well struck. The two shield rivets close to the waist lack absolute detail, characteristic of the type, but this hardly affects the eye appeal. Census: 32 in 67 Full Head, 2 finer (6/09). (#5771)

- 538 1930-S MS67 NGC.** Russet-red and golden-brown freckles embrace the obverse periphery, although the remainder of this lustrous Superb Gem has only a hint of golden toning. The three sprigs have full detail, but the center of the head shows slight softness. (#5780)

- 539 1930-S MS67 Full Head NGC.** An impressively lustrous Superb Gem from the final San Francisco Standing Liberty quarter issue, well-defined save for slight softness on the lower left rivets of the shield. Orange shadings of varying intensity give way to faintly gold-tinged silver-white centers. (#5781)

- 540 1930-S MS67 Full Head NGC.** Both sides exhibit vibrant, dazzling luster over bright snow-white surfaces. Unusually crisp for the type, the strike is especially sharp on Liberty's head detail. Not even the most trivial contact mark breaks the continuity of the swirling mint luster. A beautiful Superb Gem that would enhance almost any high grade collection of Standing Liberty quarters. Census: 22 in 67 Full Head, 2 finer (6/09). (#5781)

WASHINGTON QUARTERS

- 541 1932-D MS61 NGC.** Slightly frosty with light silver-gray luster overall and glimpses of gold near the rims. A few small ticks are visible on the portrait, but the overall eye appeal is better than the grade might suggest. (#5791)

- 542 1932-D MS64 PCGS.** Soft frosted mint luster embraces this near-Gem key representative, and a well executed strike delivers strong definition to the design features. A few wisps of light gold color are visible over each side. Some minuscule marks deny Gem status. (#5791)

Lovely MS64 1932-D Quarter

- 543 1932-D MS64 NGC.** Rich champagne-gold patina bathes the highly lustrous surfaces of this D-mint key-date quarter, and an attentive strike imparts sharp definition to the design elements. A couple of minute, unobtrusive marks prevent Gem status. NGC has seen only 17 numerically finer examples (6/09). *From The Bay State Collection, Part One.* (#5791)

Lustrous 1932-D Gem Quarter

- 544 1932-D MS65 NGC.** Soft violet and champagne-gold patination bathes the lustrous surfaces of this Gem key-date representative. The design elements are sharply impressed, enhancing the coin's overall eye appeal. A few grade-consistent marks do not detract. Census: 17 in 65, 0 finer (6/09). (#5791)

- 545 1932-S MS64 PCGS. CAC.** A satiny beauty with hints of iridescent toning over brilliant silver surfaces. This issue and the 1932-D are the classic key-date issues in the Washington quarter series, always in demand regardless of grade. (#5792)

Enticing Gem 1932-S Quarter

- 546 1932-S MS65 PCGS.** Potent luster and light golden toning ensure the originality of this Gem key date quarter. Only a few wispy grazes are present on each side. Sharply struck and desirable, since the 1932-S is famous as the lowest mintage issue of the series. Population: 92 in 65, 4 finer (6/09).
Ex: Summer FUN Signature (Heritage, 6/2008), lot 930, which realized \$4,697.75. (#5792)

In-Demand Gem 1932-S Quarter

- 547 1932-S MS65 PCGS.** The 1932-S has the lowest mintage in the series with only 408,000 pieces struck. As a result, it is one of the key issues among all Washington quarters. This is a bright, highly lustrous Gem that is sharply defined throughout and shows no obvious abrasions on either side. Population: 92 in 65, 4 finer (5/09). (#5792)

- 548 1934 Doubled Die Obverse MS62 PCGS.** FS-101, formerly FS-009. The Medium Motto is obviously die doubled, and the date and LIBERTY have thick letters. The most prominent doubled die of the entire Washington quarter series, photographed on page 170 of the 2010 *Guide Book*. Lustrous and faintly toned with attractive preservation. (#5795)

- 549 1936-D MS65 PCGS.** A well-defined Gem example of an early Washington quarter issue that is elusive any finer. Each side is primarily pale silver-gray with soft luster, though the obverse also shows golden-brown peripheral toning. An issue that is becoming a popular semikey in the series.
From The Bay State Collection, Part One. (#5801)

Lovely MS67 1941-D Quarter

- 550 1941-D MS67 PCGS.** The 1941-D Washington quarter is a fairly common issue up through Gem and Premium Gem levels, but at the Superb Gem rank, the population thins dramatically. This piece offers stunning, distraction-free surfaces with radiant cartwheel luster, mostly silver-white with a crescent of almond patina on the obverse. Population: 20 in 67, 1 finer (6/09).
From The Bay State Collection, Part One. (#5815)

PROOF WASHINGTON QUARTERS

- 551 1936 PR66 PCGS. CAC.** Sharply struck and undisturbed with light aquamarine and tan-gold toning. 1936 is the introductory (and lowest mintage) proof date of the Washington quarter series. Collectors of the day focused on the myriad new commemorative issues, while proofs of the circulating designs were comparatively ignored. (#5975)

Enchanting PR68 1937 Quarter

- 552 1937 PR68 NGC.** Boldly impressed and astoundingly well-preserved, this second-year proof Washington quarter offers considerable reflectivity beneath rich patina. Pale but thick silver-gray central toning gives way to varying degrees of yellow and rose peripheral toning, more prominent on the obverse. Census: 12 in 68, 1 finer (6/09). (#5976)

Beautiful PR68 1938 Quarter

- 553 1938 PR68 NGC.** Beautifully toned with green, red, yellow, and gold iridescence near the upper and lower peripheries. The fields are as smooth as glass on the obverse, while a coating of opaque beige patina blankets the reverse. Fully struck and pristine. Census: 12 in 68, 0 finer (6/09).
Ex: Dallas Signature (Heritage, 11/2005), lot 1579, which realized \$5,031.25. (#5977)

- 554 1939 PR68 NGC.** An impressive Superb Gem proof, tied for the finest that has ever been certified, with fully brilliant and deeply mirrored fields around reflective devices. A delightful example. Census: 15 in 68, 0 finer (6/09). (#5978)
- 555 1941 PR68 NGC.** An exquisite Superb Gem proof, this fully brilliant Washington quarter has deeply mirrored fields around reflective devices. Census: 29 in 68, 0 finer (6/09). (#5980)
- 556 1953 PR68 Ultra Cameo NGC.** The strongly cameoed surfaces are untoned and mark-free. Well struck throughout. Minor die doubling on IN GOD WE TRUST is a characteristic of all proof quarters of this date. Census: 10 in 68 Ultra Cameo, 1 finer (6/09). (#95985)
- 557 1955 PR68 Deep Cameo PCGS.** Icy devices demonstrate magnificent contrast with the dark, glassy fields. Fully brilliant and essentially immaculate. Population: 20 in 68 Deep Cameo, 0 finer (6/09). (#95987)

PROOF STATEHOOD QUARTER

- 558 1999-S Pennsylvania Silver PR70 Deep Cameo PCGS.** A flawless specimen of the Pennsylvania quarter proof, struck in the throwback .900 fine "coin silver" alloy. Impressively contrasted and desirable. One of just 49 pieces for the issue assigned the ultimate grade by PCGS (6/09). (#913000)

EARLY HALF DOLLARS

Coveted 1794 Half, O-101, Good 6

- 559 1794 Good 6 PCGS.** O-101, R.4. The date is fully readable and only star 12 is indistinct. All letters in the reverse legend are clear. Toned deep charcoal-gray with lighter stone-gray shades on the reverse. The first-year 1794 half dollar has less than one-tenth the mintage of the only other Flowing Hair date in the series, the 1795. (#6051)

- 560 1795 2 Leaves Fine 12 PCGS.** O-125, High R.4. Light tan-brown and silver-gray visit the obverse, while the slightly darker reverse provides russet, chestnut, and stone-gray toning. An unblemished representative with ample remaining definition within Liberty's hair. Most 1795 half dollar varieties are collectible if costly, but the R.8 O-132 precludes completion. (#6052)

Scarce 1795 Half, O-117, Fine 15, Ex: Reiver

- 561 1795 Two Leaves Fine 15 PCGS.** Ex: Reiver. O-117, R.4. Overton's "defect line" between the right arm and base of Y in LIBERTY identifies the die marriage. Overton stated that the field was unfinished below the chin; however, it may be the case that the rough lines he examined are actually clash marks from the eagle's wing. O-121 has a similar appearance. This piece is an early die state, with no evidence of the crack from 5 o'clock to the bust. Although the present obverse die was only used for O-117, the reverse proved more hardy and was eventually paired with three other obverse dies. The surfaces are deep gunmetal-gray, lighter on the major devices than in the fields. Minor marks are near star 3 and the nose; the reverse shows no relevant marks, but the center exhibits greater wear than the remainder of the piece. Ex: Paul Padgett (7/28/1981); Jules Reiver Collection (Heritage, 1/2006), lot 22498, where it realized \$2,530. (#6052)

- 562 1795 2 Leaves—Scratched, Improperly Cleaned—NCS. VF Details.** O-117, R.4. The obverse is tan-gray with areas of brilliance, while the reverse is gunmetal-gray and silver-white. A bit bright from cleaning, and the obverse has numerous pinscratches. (#6052)

**Choice AU 1795 Flowing Hair Half
Two Leaves, O-121**

- 563 1795 2 Leaves AU55 NGC.** O-121, High R.4. This variety is quickly identifiable by the bold remnants of a star under the Y in LIBERTY. Apparently the engraver sunk star 9 before realizing that the upper legend was incomplete. The star detail was then partially effaced and the Y properly entered into the die. And thus the famous “16 Star, LIBERTY” variety that could have been was averted! Such is the joy of early American coinage. Other die imperfections are observed: The obverse shows a 2-mm graver’s slip emanating from Liberty’s second lowest curl, and the upper serif of the 5 in the date is boldly recut. On the reverse, traces of another letter—possibly an E—are visible under the upper portion of the last S in STATES. In addition, C and A in AMERICA are heavily repunched. Heavy clash marks are typically found on both sides of this die marriage.

The current O-121 half dollar is the second finest example, in terms of certified grade, that we have offered since the beginning of our online auction archives in 1993, the best being the AU58 piece sold as part of our January 2008 FUN sale. That coin realized \$46,000 with the buyer’s premium. Although Condition Census rankings are subject to scrutiny, it is safe to say that this piece resides in the upper echelon of known survivors for the variety.

Light gray surfaces are the canvas for the boldly struck details of this attractive offering. Traces of luster are observed in the protected areas, but more so on the reverse. For the sake of accuracy, we note a small area of light planchet roughness to the left of stars 13 through 15, and a few minor adjustment marks on the right reverse rim. (#6052)

- 564 1795/1795 2 Leaves VG8 PCGS.** O-112, R.4. Even in its worn state, this Flowing Hair half shows the doubled digits (or “Recut Date” in *Guide Book* parlance) boldly. The gold-gray obverse shows a number of cuts, but the slate-blue reverse is pleasingly preserved for the grade. Population: 2 in 8, 14 finer (5/09). (#6055)

**Dramatic Repunched Date
O-112a 1795 Half, VF25**

- 565 1795/1795 2 Leaves VF25 ICG.** O-112a, R.4. The date is double-punched, with the first entry very low, and corrected such that the second placement leaves the final date position much higher. The lower halves of the numerals from the first date position show clearly beneath, touching the border. A pleasing, natural appearance is presented on each side, with toning variations that range from pearl-gray and sky-blue to aqua-blue and golden-brown near the borders. (#6055)

Gorgeous 1796 O-102 Half, Fine 15

566 1796 16 Stars Fine 15 PCGS. O-102, High R.5. Collectors attempting to complete a type set of U.S. coinage ultimately are faced with the acquisition of a 1796 or 1797 half dollar. While not the rarest U.S. type coin (the 1796 No Stars and 1808 quarter eagles have that distinction), the Draped Bust, Small Eagle half dollar is certainly the most pricey grade for grade.

Moreover, type collectors face stiff competition from early half dollar date and variety specialists. That is because the 1796 half comes with either 15 or 16 stars (the latter apparently associated with the admission of Tennessee as the 16th state), and the 1797 has two slightly different reverses, one of which includes an advanced die state. In addition to its two-year type status, these attributes make this Draped Bust Small Eagle design type an exciting series for numismatists.

The present 1796 16 Stars half dollar will satisfy collectors of any of the above persuasions. Except for expertly reengraved stars, the detail on the remaining design elements appears to be original. Liberty's hair and facial features are quite strong, and all of the dentilation shows. Indeed, only the lowest portions of the eagle exhibit a bit of weakness. The enhanced star detail is so well executed that it is quite easily overlooked. Natural golden-gray patina displays aqua-green and golden-tan accents in the recesses, especially on the obverse, with whispers of russet more prominent on the reverse. Close examination reveals no detracting abrasions or scratches, and adjustment marks are completely absent. In summary, this is a rather exceptional piece for a coin that has seen moderate circulation. (#6058)

- 567 1801—Cleaned—ANACS. Fine 15 Details.** O-102, High R.4. A smooth example of this scarce variety, with silver-gray centers and variegated red-orange and sea-green border toning on both sides. A few superficial pinscratches are noted on the harshly cleaned surfaces. (#6064)

Scarce 1801 Half Dollar, O-101, Fine 15

- 568 1801 Fine 15 PCGS.** O-101, R.3. One of only two die varieties for the date, after a hiatus in half dollar production of four years. On the reverse, A2 is close to the eagle's wing but does not touch it. Numerous die defect lumps are present, as noted by Overton. The design details are bold, with a few minor rim nicks and pinscratches noted on each side. Three of the top row of reverse stars are absent, either from wear or a weak strike. A pleasing enough example for the grade. Housed in a first-generation PCGS holder. (#6064)

- 569 1803 Large 3 VF20 ANACS.** O-103, R.3. An original example with a clean, well-detailed appearance and just a few small abrasions on the obverse. Attractive plum-gray toning adorns each side. (#6066)

- 570 1803 Small 3 VF30 PCGS.** O-104, R.3. An unmarked and slightly subdued slate-gray representative. All letters in E PLURIBUS UNUM are clear. An underappreciated variety, significantly scarcer than its Large 3 counterpart. (#6067)

Elusive XF45 1803 Small 3 Half, O-104

- 571 1803 Small 3 XF45 NGC.** O-104, R.3. The scarcest variety of the year, and the sole Small 3 die pairing. A richly detailed stone-gray Choice XF example. The eagle's eye is absent, but the strike is otherwise bold. Neither side has any relevant abrasions. Census: 5 in 45, 11 finer (6/09). (#6067)

- 572 1805/4—Improperly Cleaned—NCS. AU Details.** O-102, R.3. A die crack runs through the second star to the curls. There are four reverse berries with long stems on the center ones, no stems on the upper and lower ones, and 12 arrows with the second arrow point below the left stand of N. The underdigit 4 is obvious. Medium intensity multicolored toning covers both sides. Fine toned-over pinscratches are visible on the obverse. (#6070)

- 573 1806/5 XF40 ANACS.** O-103, R.2. Sun-gold luster dominates protected areas of this otherwise pearl-gray half dollar. E PLURIBUS UNUM is sharp, and consequential marks are absent. The 0 in the date is recut and may represent a 0 over horizontal O. (#6077)

- 574 1806 Knobbed 6, Large Stars XF40 PCGS.** O-105, R.2. Overton states that there are six berries on the reverse of this variety, but that may not be true. He states, "The berry above the branch and closest to the claw, is a tiny one without a stem." This berry is not discernible on the Overton photo image, however, nor is it visible on the current example. The other diagnostics of O-105 are seen, including recutting on T in LIBERTY, AME joined at base, and a bold die line from upper right corner of shield on the reverse. Cobalt-blue, purple, gold, gray, and mauve patination covers both sides. Lightly marked. (#6074)

Pleasing Choice XF 1806 O-105a

Knob 6, Large Stars Half

- 575 1806 Knobbed 6, Large Stars XF45 PCGS.** O-105a, R.2. Cream-gray and golden-brown blend throughout this richly toned Choice XF Bust half. There are no distracting marks, and substantial luster lurks within design crevices. The sole Knobbed 6, Large Stars die marriage. Population: 8 in 45, 4 finer (6/09). (#6074)

- 576 1806 Pointed 6, No Stem XF45 PCGS.** O-109, R.1. This is a gorgeous Choice XF example of the Pointed 6, No Stem variety. The engraver neglected to add a stem to the branch, which makes it appear to be growing out of the eagle's claw. Deep violet-gray toning is uniform on the reverse, and mingles with dappled shades of light-gray and forest-green on the obverse. (#6073)

- 577 1806 Pointed 6, Stem XF40 NGC.** O-115, R.1. On this variety, the TY of LIBERTY is recut, there are five berries on the branch and the lower one has no stem, the star point is attached solidly to the beak, and the lower point of the same star is buried in the scroll. Intermediate between O-115 and O-115a. While the crack at the bottom of the date branches into two cracks at left, there is no crack at top of LIBER. Light silver-gray surfaces display fairly good detail on the design elements and are devoid of mentionable marks. (#6071)

Scarce Choice XF 1806 Bust Half

Pointed 6, Stem, O-116

- 578 1806 Pointed 6, Stem XF45 PCGS.** O-116, R.3. Bold die cracks along the date and left-side stars make attribution easy. Glimmers of bright luster emerge from design crevices of this attractive Choice XF Draped Bust half. The golden-gray surfaces are smooth aside from a pair of faded thin marks near the forehead. (#6071)

**Desirable MS63 Pointed 6, Stem
1806 Draped Bust Half, O-115a**

- 579 1806 Pointed 6, Stem MS63 PCGS. O-115a, R.1.** The variety is confirmed by the recut T and Y of LIBERTY and the five berries on the reverse, the lowest of which has no stem. As Overton describes, the crack at the bottom of the date becomes sharper and branches into two cracks at the left, one passing below stars 1 to 3, the other going through stars 1 to 5. A crack has developed at the top of STATES but does not progress downward to join UNITED, as Overton indicates that it should. Some Bust half specialists suggest that no such advanced crack exists.

Dusky golden-gray toning displays splashes of cobalt-blue and lavender on the reverse. The design elements are well impressed and nicely centered on the planchet, and the dentilation is complete and strong on both sides. No adjustment marks are visible. (#6071)

**Select Mint State 1806 Half Dollar
Pointed 6, Stem, O-120a**

- 580 1806 Pointed 6, Stem MS63 PCGS. O-120a, R.4.** A middle die state with a prominent break on the shield that extends over vertical stripes 3 through 5. A smaller break is seen above stripe 1, and the die appears shattered near the AM in AMERICA. A slender die crack bisects the bust, and the left obverse border has a network of spindly cracks. Not the final die state, which has an even larger break between stripes 2 to 6. This well struck example has satin luster and rich blended sea-green and rose-gray toning. The right obverse displays two thin marks that intersect near star 11. (#6071)

- 581 1807 Draped Bust VF35 PCGS. O-103, R.3.** The serif of Y in LIBERTY is higher than T, star 13 points to an upper fold of drapery, and there are five berries on the branch. Silver-gray surfaces exhibit nicely detailed devices and are minimally marked. (#6079)

- 582 1807 Draped Bust XF40 PCGS. O-105, R.1.** A comparatively available variety for this final-year Draped Bust issue. Blue-gray and gold-gray predominate, while the lightly worn high points show pale silver-gray color. (#6079)

**Well Struck 1807 Draped Bust
Half Dollar, O-108, MS61**

- 583 1807 Draped Bust MS61 NGC.** O-108, R.3. Star 7 points above the base of L. Star 8 points well above the base of Y and nearly touches star 9. The reverse is missing the right base of the F in OF, five berries all have thick stems, a leaf points to the extreme right of the I in AMERICA, AM is joined at the base and A is joined to the third feather, and the beak comes down on the upper side of the star point. A crack runs from the upper right point of star 3 into the field. The silvery surfaces of this MS61 example display well struck design elements and retain a good amount of luster. A few faint marks show up under magnification. (#6079)

BUST HALF DOLLARS

**Bold 1807 Large Stars, 50/20
Half Dollar, O-112, AU53**

- 584 1807 Large Stars, 50 Over 20 AU53 NGC.** O-112, R.1. The engraver blundered and punched a 2 rather than a 5 at the bottom reverse, then corrected the error, creating the variety. Blended tan-brown, gunmetal-gray, and aqua-blue toning embraces this well detailed Bust half. The subdued surfaces have relatively few marks. (#6086)
- 585 1809 Normal Edge AU58 PCGS.** O-102a, R.1. The Recut U reverse with die crack running above UNITED STATES OF AMERICA. This strongly lustrous near-Mint piece offers substantially above-average detail with just a touch of friction across the high points. Warm green-gold, blue, and violet shadings embrace each side. For all Normal Edge varieties, Population: 55 in 58, 38 finer (6/09).(#6092)

Lovely 1810 Select Half Dollar, O-102

- 586 1810 MS63 NGC.** O-102, R.1. This coin is intermediate between the O-102 and O-102a die states, as the die crack through the 18 in the date circles left along the rim and right to stars 12 and 13, while on the reverse the die crack runs all the way clockwise from 50 C through STATES before terminating. This lustrous example has pinkish-gray central toning that cedes to electric blue at the rims on each side. A few minor obverse marks and a soft impression on the eagle's left (facing) wing determine the grade. (#6095)
- 587 1811 Small 8 AU55 NGC.** O-111, R.1. Luster illuminates the margins of this lightly circulated Capped Bust half. Golden-brown and navy-blue congregate along the borders. A few wispy marks include a concealed abrasion on the bridge of the nose. (#6097)
- 588 1812/1 Small 8 AU58 PCGS.** O-102a, R.2. The sole Small 8 overdate variety for the date. O-101 is also an overdate but has a large 8. Sea-green, orange, olive, golden-brown, and lavender toning embraces this partially lustrous and unblemished near-Mint half. Population: 12 in 58, 13 finer (6/09).(#6101)
- 589 1812 AU55 PCGS. CAC.** O-105a, R.2. Although a common variety, late die states are slightly scarcer than the early states. This piece has natural silver-gray surfaces with pleasing gold toning along the borders. (#6100)
- 590 1812 MS61 NGC.** O-105a, R.2. Milky golden-orange and steel-blue patina atop satiny surfaces that exhibit sharply struck devices. Light marks are visible on Liberty's cheek, neck, and chest. Extensive die cracks on both sides match up with later die state criteria in the Overton reference. (#6100)

Charming Near-Gem O-110 1813 Half

- 591 1813 MS64 PCGS.** O-110, R.1. This example has extremely heavy clash marks on the obverse, including almost all of the scroll beneath the bust and also left and right of the hair. The dies clashed at least three times, as certain individual letters can be seen in triplicate. A sharply struck example with frosty luster and peripheral sea-green toning and pink toning. (#6103)
- 592 1817/3 XF45 NGC.** O-101a, R.2. Cobalt-blue and tobacco-brown adorn the peripheries of this moderately circulated example. The underdigit 3 is obvious, and the only bagmark is beneath the eagle's beak. (#6111)
- 593 1820/19 Square Base 2 AU55 NGC.** O-101, R.2. The underdigits show clearly on this well defined Choice AU half dollar. Light to medium gray patina shows over both sides, each of which is minimally marked. (#6125)

Choice O-105 1824 Half Dollar

- 594 1824 MS64 PCGS. O-105, R.2. A tiny die lump on the chin helps attribute the Overton marriage. Diverse aquamarine, honey-gold, and fire-red adorn the margins of this lustrous near-Gem. Boldly struck aside from a few star centers. A trace of grease struck in Liberty's ear will identify this unmarked example. Population: 46 in 64, 14 finer (5/09). (#6137)

Well Defined 1825 Half, O-105, MS64

- 595 1825 MS64 PCGS. O-105, R.2. Most easily attributed by the joined tops of ITE and the bottom serifs of ED. The profile of Liberty is strongly strike-doubled. Lustrous surfaces display whispers of light tan-beige. A nicely defined piece with just a few minute obverse marks. Population: 86 in 64 for the issue, 14 finer (5/09). (#6142)
- 596 1826 MS63 PCGS. O-117, R.2. This Select example has deep lilac and gold toning on both sides, with traces of steel and blue. The luster on the reverse is somewhat stronger. Boldly struck and highly desirable with excellent aesthetic appeal. (#6143)

Iridescent 1827 O-141 Half Dollar, MS64

- 597 1827 Square Base 2 MS64 NGC. CAC. O-141, R.2. A late die state with little dentilation on either side. This desirable example has fully lustrous surfaces beneath iridescent toning. Both sides are boldly detailed at the centers and weaker near the borders. A relatively common variety but usually found in lower grades. (#6144)

Nicely Toned MS64 1827 Half, O-131

- 598 1827 Square Base 2 MS64 PCGS. CAC. O-131, R.2. A die line (extension of the curl) between the L and I in LIBERTY joins the headband to the curl at the bottom and to the cap above. On the reverse the I in PLURIBUS is centered under the right side of the second T in STATES. Light sky-blue and gold patina covers lustrous surfaces that are devoid of significant marks. An impressive strike shows strong definition on the design features. Population: 80 in 64, 19 finer (6/09). (#6144)

Sharp 1827 Square Base 2 Half Dollar, O-105, MS64

- 599 1827 Square Base 2 MS64 PCGS. O-105, R.3. The 7 in the date is nearly centered over a dentil, and the top of the 5 in the denomination is recut. Very similar to O-116 (R.5), except that the latter shows the 7 between two dentils. Medium intensity orange-gray patina resides on both sides of this near-Gem. Nicely struck and well preserved. Population: 80 in 64 for the issue, 19 finer (5/09). (#6144)

Crisp 1827 Square Base 2 Half Dollar O-112, MS66

- 600 1827 Square Base 2 MS66 NGC. O-112, R.3. There is a fine die line in the feathers above the apex of the shield. Not quite die state O-112a, for while there is a vertical die crack between star 13 and the 7 in the date, there is no corresponding vertical crack between 82 into the bust. Splashes of electric-blue and lavender at the borders cede to golden-gray centers on this lustrous Premium Gem. Sharply struck and well preserved. Census: 22 in 66 for the issue, 2 finer (5/09). (#6144)

**Scarce Near-Gem 1829 Half Dollar
Small Letters, O-112a**

- 601 1829 Small Letters MS64 PCGS.** O-112a, R.2. The Overton subvariety with the die lines east of the date no longer present. Blended golden-brown and apple-green embraces this satiny and well struck near-Gem. The high points display hints of deep dove-gray. Population: 39 in 64, 15 finer (6/09). (#6154)

- 602 1830 Small 0 MS61 NGC.** O-113, R.2. 1 is slightly higher than 830, and both A's in AMERICA are filled at the tops. A well struck specimen with strong luster and deep, variegated rose, charcoal-gray, and emerald-green patina. Scattered russet specks limit the grade. There are few surface marks. (#6156)

- 603 1830 Small 0 MS63 PCGS.** O-101, R.1. A common variety, yet in this case an exquisite coin for the type or design collector who desires an attractive, yet affordable representative of John Reich's handiwork. The surfaces are fully lustrous, brilliant, entirely untuned, and free of distracting marks. (#6156)

Impressive 1830 O-109 Half, MS64

- 604 1830 Small 0 MS64 PCGS.** O-109, R.3. The 8 in the date is widely recut within the upper loop. Variegated golden-brown enriches this lustrous near-Gem. The strike is sharp, and the fields are impressively devoid of contact. The portrait has minor marks, but the eye appeal is undeniable. (#6156)

- 605 1830 Large 0 MS63 NGC. CAC.** O-123, R.1. Sun-gold dominates the obverse, although the border offers powder-blue. The reverse provides only light almond-gold patina. Lustrous and impeccably struck with occasional trivial marks. (#6157)

- 606 1831 MS63 PCGS.** O-119, R.3. A later state with the obverse die lines missing. Well-defined and attractively lustrous with rich patina, a delightful Select representative. The obverse shows predominantly blue, violet, and rose shadings, while the reverse exhibits lighter gold and peach overtones. Striking eye appeal. (#6159)

Near-Gem 1831 O-119 Half Dollar

- 607 1831 MS64 PCGS.** O-119, R.3. This late die state has peripheral weakness, with die lines left of the bust entirely absent. All of the stars are extended to the border. The reverse has a weak area on the motto, obliterating PLU. The central obverse and reverse design motifs are boldly defined. A fully brilliant near-Gem, this piece exhibits frosty luster without toning on either side. (#6159)

Bright MS64 1831 Half Dollar, O-103

- 608 1831 MS64 PCGS.** O-103, R.1. A slight die crack extends along the bottom of the date, and the stand of 5 in the denomination is recut. The surfaces are highly lustrous with lovely gold-tan and purple-rose toning over the obverse, while the reverse is untuned. This near-Gem is well struck and shows a mere handful of scattered, tiny marks that keep it from grading even higher. (#6159)

Remarkable 1831 O-103 Half, MS65

- 609 1831 MS65 PCGS.** O-103, R.1. The recut 5 provides immediate variety identification for the O-103 of 1831. It also raises the desirability of the variety among specialists and nonspecialists alike. A remarkable Gem, this example has brilliant silver luster with variegated toning on both sides. (#6159)

Lustrous Gem 1831 Bust Half, O-110

- 610 1831 MS65 NGC.** O-110, R.2. There is a small tine of metal above the R in LIBERTY. On the reverse, the A in STATES is flat, thickened, and rotated, with its right (facing) base beneath the left base of the second T. Violet and sky-blue patina covers lustrous surfaces, and the design elements are generally well struck. Nicely preserved throughout. Census for the date: 56 in 65, 16 finer (6/09). (#6159)

- 611 1832 Small Letters MS62 PCGS.** O-110, R.1. A brilliant and lustrous Mint State piece with excellent design details, weak only at the scroll opposite the bust tip. Both sides have frosty surfaces beneath pale champagne toning. (#6160)

Deeply Toned 1832 Small Letters Half MS65, O-103

- 612 1832 Small Letters MS65 NGC.** O-103, R.1. A die lump is noticeable on Liberty's drapery fold, between 18 and the clasp. Recutting on the upright of the 5 in the denomination is also diagnostic for this variety. A lovely Gem example with olive, cobalt-blue, and reddish-gold toning. Well preserved and free from any significant surface blemishes. (#6160)

Delightful Gem O-119 1832 Small Letters Half

- 613 1832 Small Letters MS65 PCGS. CAC.** O-119, R.3. The date is low and well spaced. On the reverse, the I in PLURIBUS is located below the left foot of the T in STATES, and the A in STATES is recut. Vibrant luster and rich, multicolored toning are hallmarks of this lovely Gem example. The design elements display uniformly bold definition, except for typical flatness on the obverse stars, and the surfaces are well preserved.
From The Bay State Collection, Part One. (#6160)

- 614 1833 MS62 PCGS. CAC.** O-110a, R.2. Dove-gray and autumn-gold blend throughout this satiny and smooth Capped Bust half. The stars are softly brought up, but the remainder of the strike is crisp. (#6163)

Dusky-Gray 1833 O-113 Half, MS64

- 615 1833 MS64 PCGS.** O-113, R.2. Attributed by a tiny depression in the left corner of the shield, and by the 0 lower than the 5. Medium intensity golden-gray patina covers both sides of this near-Gem, and there is strong striking definition throughout. Pleasingly preserved and devoid of significant flaws. For all varieties, PCGS has graded just 18 pieces finer (6/09). (#6163)

Near-Gem 1833 Bust Half, O-114

- 616 1833 MS64 PCGS.** O-114, R.2. A broad die scratch between vertical stripes 3 and 4 attributes this Overton pairing. Gentle tan-gold toning visits comprehensively lustrous fields and devices. Well preserved with only minor grazes on Liberty's neck. Population: 74 in 64, 18 finer (6/09). (#6163)

Richly Toned 1833 Half, O-102, MS65

- 617 1833 MS65 NGC.** O-102, R.1. Star 1 is recut at multiple points, and a broad stubby top is seen on the 5 in 50 C. A die line (as made) extends from the olive branch stem to the C in the denomination. This Gem example is highly lustrous and displays attractive, obviously original toning across both sides. (#6163)

Sparkling MS66 1833 Half, O-108

- 618 1833 MS66 NGC. O-108, R.1. A remarkable Capped Bust half that boasts ebullient luster and unabraded surfaces. Both sides are lightly toned on the fields and devices, while the margins offer medium fire-red and chestnut-brown patina. The striking details are strong throughout. Census: 5 in 66, 4 finer (2/09). (#6163)

Pleasing 1834 Large Date, Small Letters Bust Half, O-107, MS63

- 619 1834 Large Date, Small Letters MS63 PCGS. O-107, R.1. A small lump die break in the top of I in LIBERTY and a recut left stand in the M of AMERICA confirm the variety. Purplish-blue and gold patination cover both sides of this Select example, and a well executed strike leaves strong definition on the design elements. The surfaces display ample luster and reveal minute marks on the cheek and neck that limit a finer grade. (#6165)
- 620 1834 Small Date, Small Letters MS62 PCGS. O-110, R.3. Lengthy die cracks through the scroll and the olive branch confirm this scarce variety, as does the flat star 8 and the second and third lines of stripe 3 solid to crossbar 2. Wisps of gold and lilac toning are visible on the luminous, well struck surfaces. Light handling marks occur on Liberty's cheek and neck. (#6166)
- 621 1835 MS63 PCGS. O-103, R.2. Diagonal and parallel die lines within the shield identify the die marriage. Autumn-gold and cream-gray with a band of navy-blue about the obverse periphery. The satiny surfaces are free from visible marks, and the devices display occasional softness of strike. Population: 40 in 63, 38 finer (6/09). (#6168)

Elusive Choice 1836 Half Dollar Lettered Edge, O-113

- 622 1836 Lettered Edge MS64 PCGS. O-113, R.2. Along with O-108, O-113 exhibits an unusual double outline to Liberty's drapery clasp. Dappled autumn-gold and olive-gray dominates this gently shimmering and well impressed near-Gem. Clearly original and only lightly abraded. Population: 53 in 64, 14 finer (6/09). (#6169)

Lustrous Gem 1836 Half Dollar Lettered Edge, O-112

- 623 1836 Lettered Edge MS65 NGC. O-112, R.1. A relatively common variety in an uncommon grade, the die pair distinguished by the die line connecting the lower two arrowheads on the reverse. Strongly lustrous and well-defined with splashes of blue, violet, and peach peripheral toning around light silver-gray centers. For unattributed Lettered Edge pieces, Census: 20 in 65, 6 finer (6/09). (#6169)

REEDED EDGE HALF DOLLARS

Desirable Near-Gem 1837 Half

- 624 1837 MS64 NGC. A great near-Gem example of the first heavily produced Reeded Edge half dollar issue, lightly toned sea-green and pale blue-gray over softly lustrous surfaces. The strike and preservation are equally pleasing. Die cracks are noted at the lower and left obverse and reverse peripheries. (#6176)

Elegant Gem 1837 Reeded Edge Half

- 625 1837 MS65 NGC.** An exquisite Gem representative of the first heavily produced Reeded Edge half dollar issue, sharply struck with powerful luster that includes slight reflectivity. Colorfully toned with powder-blue and green-gold shadings that mingle on the obverse and rich fire-orange and rose toning across the reverse. Census: 39 in 65, 12 finer (6/09). (#6176)
-

SEATED HALF DOLLARS

- 626 1840 Reverse of 1839, Small Letters MS63 NGC.** Luminous surfaces display light tan color, slightly deeper on the reverse. Well struck, except for softness in some of the star centers. Minute handling marks limit the grade. Scarce in Mint State. (#6234)
-

Charming Select 1844-O Half

- 627 1844-O MS63 PCGS.** An attractive Select example of this New Orleans half dollar, a rare issue in most Mint State grades despite a mintage exceeding 2 million pieces. Dappled rose-gray, olive-gold, and silver-white elements allow ample satiny luster to shine through. Minimally abraded for the grade. Population: 9 in 63, 5 finer (5/09). (#6246)
-

Gorgeous Gem 1845-O Half

- 628 1845-O MS65 NGC.** Despite a mintage of nearly 2.1 million pieces, this heavily circulated New Orleans half dollar issue has survived only infrequently in Mint State, and there are only four Gems in the combined certified population with none finer (6/09). This example is one of them, brightly lustrous with a touch of frostiness on the central high points. Overall definition is strong, though the peripheral stars show slight softness. A hint of golden toning has settled over the carefully preserved surfaces. This memorable example should appeal to Seated half collectors who desire only the finest. (#6249)
-

Delightful 1846 Medium Date Half, MS64

- 629 1846 Medium Date MS64 NGC. CAC. WB-101.** A Medium Date variety, distinguished by the base and crossbar of the 4 touching. This near-Gem is well struck with lovely luster beneath dappled peach, sky-blue, rose, and silver toning. This Seated half has amazing eye appeal in all respects. Census: 11 in 64, 7 finer (6/09). (#6251)
-

Condition Rarity 1849 Half, MS64

- 630 1849 MS64 NGC. CAC. Light blue-violet and yellow-gold patination on the obverse cedes to deeper hues on the reverse of this lustrous near-Gem, where it is joined by splashes of orange and lavender. Sharply struck, as are most examples of the date. Nicely preserved. Common in circulated grades but rare in Mint State. Census: 8 in 64, 2 finer (6/09). (#6262)

Impressive MS64 1849-O Half, Ex: Richmond

- 631 1849-O MS64 NGC. Ex: Richmond Collection. An exceptional near-Gem example of this O-mint issue, as it is sharply struck and devoid of significant die rust (see Randy Wiley and Bill Bugert, 1993, p. 94). Medium intensity olive-green and gray toning covers nicely preserved, lustrous surfaces. A light diagonal crack bisects Liberty's head. Census: 7 in 64, 3 finer (6/09). Ex: Richmond Collection, Part III (David Lawrence, 3/2005), lot 1691. (#6263)

Tempting Near-Gem 1850-O Half

- 632 1850-O MS64 PCGS. CAC. An appealing near-Gem example of this New Orleans half dollar issue, struck at the midpoint of that Southern facility's first period as a mint. Each side has soft luster with gray-gold base color splashed with orange and peach on the obverse. Population: 19 in 64, 11 finer (6/09). (#6265)

Rare 1861-O CSA Obverse Half Dollar, AU50

- 633 1861-O CSA Obverse AU50 PCGS. WB-102. Wiley-5a. CSA Obverse. A die crack runs from Liberty's shoulder through her nose and to the rim above. This is a lovely, originally toned example with pleasing earth tones over each side. Well struck and satiny, with few surface marks and only minor wear on the devices. A shallow scratch extends from just beneath Liberty's left (facing) knee into the right obverse field, above and to the right of Liberty's elbow. Population: 1 in 50, 4 finer (5/09). (#39968)

Smooth Select Mint State 1869-S Half

- 634 1869-S MS63 PCGS. Coruscant luster bathes the refreshingly unmarked fields and devices. A good strike despite minor softness on the centers of the right-side stars. Although the 1869-S mintage was fairly generous at 656,000 pieces, Uncirculated survivors are surprisingly rare. Population: 4 in 63, 8 finer (6/09). (#6326)

- 635 1873-S Arrows AU50 PCGS. Pastel golden-gray, violet, and lavender patination bathes both sides of this S-mint half dollar type coin. Luster resides in the protected areas of the well defined design features. A vertical toning streak traverses Liberty's head and breast. (#6345)

- 636 1878-CC Good 4 NGC. Due to high mintages of the new Morgan dollar, Carson City half production dropped precipitously from immediately preceding years, and only 62,000 pieces were struck. Those were little saved, similar to the famous 1878-S rarity. This is an original piece that shows just normal wear over both sides. The fields have a rich violet patina with pinkish-tan accents on the devices. Ex: Central States Signature (Heritage, 4/2001), lot 6549; Long Beach Signature (Heritage, 5/2008), lot 709, which realized \$1,035. (#6359)

Exemplary Premium Gem 1879 Half

- 637 1879 MS66 NGC.** Type Two Reverse. A beautiful and essentially brilliant Premium Gem that has a remarkably pristine appearance. The strike is complete aside from slight inexactness of strike on the eagle's left (facing) claw. Only 4,800 commercial pieces were struck. Census: 36 in 66, 12 finer (6/09).
From The Bay State Collection, Part One. (#6361)

- 638 1881 MS64 NGC.** This low mintage near-Gem is prooflike, although undesignated as such by NGC due to a prior generation holder. The devices are icy and contrast with the flashy fields. Minimally abraded, although the fields show pinpoint strike-throughs, as made. Census: 21 in 64, 26 finer (5/09). (#6363)

Marvelous MS66 1883 Half

- 639 1883 MS66 PCGS.** Light green-gold and orange peripheral toning gives way to subtle silver-blue and peach patina over the centers. This attractive Premium Gem Seated half, one of just 8,000 business strikes produced, is well struck save for a handful of the obverse stars. Population: 8 in 66, 1 finer (6/09). (#6365)
- 640 1886 MS64 NGC.** The 1886 half dollar is from a small mintage of only 5,000 business strikes and is difficult to locate in Mint State grades. A medley of medium-intensity sky-blue, lavender, and gold-beige patination bathes the obverse of this near-Gem, while electric-blue and russet cling to the reverse margins, leaving the central area untuned. A well executed strike imparts sharp definition throughout. Each side is minimally abraded. Census: 29 in 64, 14 finer (5/09). (#6368)

Impressive MS66 1888 Half Dollar

- 641 1888 MS66 PCGS. CAC.** Well struck, save for typical slight weakness on the top of Liberty's head and on star 8 nearby. Satiny, coruscating luster shimmers over each side. The rose-gray central toning yields to mottled sea-green, russet, and olive patina in the fields and near the borders. Always a popular date because of the low mintage of only 12,000 pieces struck for circulation. Population: 18 in 66, 4 finer (5/09). (#6370)

PROOF SEATED HALF DOLLARS

- 642 1857 PR64 NGC.** Proof mintages were not recorded in 1857, the last year before the Mint began its mass market proof program. Wiley and Bugert estimate that less than 25 examples survive, but population data makes a total of 50 more credible. The coin offered here is sharply struck, with reflective fields under golden-brown, crimson, and lavender toning. A most attractive example of this historically significant date. Census: 10 in 64, 5 finer (6/09).
From The Bay State Collection, Part One. (#6411)

Sumptuous 1860 PR64 Half Dollar The Eliasberg Specimen

- 643 1860 PR64 PCGS.** Ex: Eliasberg. Although 1,000 proof half dollars were struck in 1860, Walter Breen (1989) writes: "Some 525 sold ... rest melted." The mirrored fields of this near-Gem highlight the motifs. Occasional wisps of champagne-gold patina visit both sides, each of which exhibits exquisitely struck design elements. Occasional handling marks preclude Gem status. Housed in a green label holder. A great coin with an important pedigree. Population: 29 in 64, 15 finer (6/09). (#6414)

Seldom-Seen Choice Proof 1861 Half

- 644 **1861 PR64 NGC.** Ruby-red, aquamarine, and peach patina invigorates this boldly struck Choice proof. A powerful loupe reveals an occasional minute mark. 1861 proofs of all denominations are much scarcer than their reported mintages; many pieces were melted as unsold by the Mint. Census: 21 in 64, 22 finer (6/09). (#6415)

Impressive 1864 Half Dollar, PR65 Ultra Cameo

- 645 **1864 PR65 Ultra Cameo NGC.** Tremendous glassy reflectivity in the fields gives this piece an extraordinarily flashy appearance. The striking definition on each side is absolutely crisp and full on all of the design details, including those elements that are sometimes found to be weak—Liberty's upper hair detail and the eagle's talons, fletchings, leg feathers and neck feathers. Some dappled plum and moss-green coloration occurs on each side in the fields, while the sharply frosted central devices only show slight amounts of patina. There are a few faint, near-microscopic hairlines on each side of the piece, but bothersome handling marks are not evident. A conditionally rare Gem from a small proof issue of only 470 coins. Census: 1 in 65 Ultra Cameo, 2 finer (6/09). *From The Bay State Collection, Part One.* (#96418)

- 646 **1870 PR63 PCGS.** Deep violet, plum, and sapphire shadings cover each side of this sharply struck Select proof. Strong eye appeal with only minor flaws beneath the patina. (#6428)
- 647 **1871 PR63 PCGS.** Tobacco-brown and electric-blue colors invigorate the margins of this nicely struck and carefully preserved proof Seated half dollar. A mere 960 proofs were struck. Population: 34 in 63, 43 finer (6/09). (#6429)
- 648 **1875 PR64 PCGS. CAC.** A few whispers of reddish-gold and cobalt-blue gather at the margins of this near-Gem proof. Some wispy marks deny Gem status. Boldly struck, and housed in a green label holder. (#6436)
- 649 **1878 PR66 NGC.** Razor-sharp striking definition with beautifully preserved surfaces that show slivers of reflectivity peeking through blankets of patina. Subtle slate-gray shadings mingle with turquoise at the margins and subtle golden tints at the centers. Census: 13 in 66, 2 finer (6/09). *From The Bay State Collection, Part One.* (#6439)

Wonderful Gem Cameo Proof 1878 Half

- 650 **1878 PR65 Cameo PCGS.** Type Two Reverse. This proof Seated half is exquisitely preserved, with only a single small contact mark visible in the right obverse field. More memorable about this Gem is its beautiful toning, with narrow blue peripheral bands fading into red and gold centers. The contrast of mirrors and frosted devices persists through the patina. Population: 5 in 65 Cameo, 5 finer (5/09). (#86439)

- 651 **1879 PR63 PCGS.** Type One Reverse. Sharply struck and undisturbed with excellent eye appeal. Cameo contrast is obvious, although the first generation holder precludes any such designation. The borders are toned light golden-brown. (#6440)

Lovely 1879 Half Dollar, PR65

- 652 **1879 PR65 NGC.** Type One Reverse. Light golden-brown toning visits the obverse center and is surrounded by fire-red and electric-blue near the rim. The reverse is blended rose-red and cream-gray with ocean-blue along the margin. A well struck Gem. Census: 33 in 65, 29 finer (6/09). (#6440)

Gorgeous 1879 Seated Half Dollar, PR64 Cameo

- 653 **1879 PR64 Cameo PCGS. CAC.** Astonishing cameo contrast occurs on each side of this gorgeous near-Gem proof. The deep mirror fields are jet-black, displaying illimitable reflectivity, while the shining silver-white devices are sharply defined and supremely frosted. Well preserved and free of noticeable contact marks on either obverse or reverse. A bit of cloudiness in the right obverse field and a faint pinscratch, near the lower left obverse periphery below star 1, are mentioned as factors that possibly limit an even finer grade. Population: 8 in 64 Cameo, 14 finer (5/09). (#86440)

- 654 1883 PR64 Cameo PCGS.** Excellent field-device contrast shows on both sides. Exquisitely struck with yellow-gold peripheral reverse toning, and minimally abraded Population: 28 in 64 Cameo, 16 finer (6/09). (#86444)
- 655 1885 PR63 PCGS.** An attractive Select proof that sports brilliant centers with peripheral russet and blue toning, mostly on the obverse. Each side also offers modest contrast. One of just 930 specimens struck. (#6446)

Stunning 1886 Seated Half, PR66

- 656 1886 PR66 PCGS.** In one of those curious numismatic coincidences, the proof mintage of the 1886 Seated half is recorded as 886 pieces. This clearly original example boasts stunning patina and super eye appeal, with electric blue encircling the rim and ceding to pink and gold hues at the centers on both sides. The strike is uniformly sharp throughout, and as expected for the grade, there are no distractions of any kind. Population: 13 in 66, 2 finer (6/09). (#6447)

BARBER HALF DOLLARS

- 657 1892-O MS63 NGC.** The 1892-O is one of the keys to a complete date and mintmark set of Barber halves, although in Select Mint State the premium it merits is surprisingly low relative to common dates such as the 1912-D. This is a golden-gray example with good luster, a suitable strike, and a few wispy marks on the portrait. Census: 35 in 63, 44 finer (5/09). (#6462)

Lustrous, Toned MS66 1892-S Half Dollar Ex: Friend Collection

- 658 1892-S MS66 PCGS. CAC. Ex: Friend.** Looking at a list of Barber half dollars in any standard reference such as the *Guide Book*, the 1892 branch mint issues are the first keys in the series. The 1892-S had a mintage of just over 1 million coins, nearly three times that of the 1892-O, yet the current 2010 *Guide Book* gives similar prices for both issues. Attractive pieces do appear on the market from time to time, usually when fine collections are dispersed. However, true Gems and especially Premium Gems represent a major hurdle for the advanced specialist.

Dale Friend acquired this piece for his collection based on its combination of technical quality and exceptional aesthetic appeal. Both sides have bright ivory luster with frosty surfaces beneath light to medium gold toning and hints of iridescence. A faint scattering of tiny marks is mostly hidden beneath the outstanding toning. Population: 4 in 66, 1 finer (5/09).

Ex: *Finest Known, Inc.*; *The Dale Friend #2 All-Time PCGS Registry Set of Barber Half Dollars* (Heritage, 1/2009), lot 3868. (#6464)

- 659 1893-O MS63 ICG.** A lively, satiny sheen encompasses each side of this Select Uncirculated example. The essentially silver-gray surfaces yield to tinges of pale gold and orange-gold at several points along the periphery. The eagle's right (facing) leg, talons, and fletchings are flat, and there are a few scattered, trivial marks on the obverse. (#6466)

- 660 1894 MS63 NGC.** Booming luster, a precise strike, and original light chestnut toning combine to ensure the eye appeal. The fields are well preserved, and only faint marks within the shield merit passing mention. Census: 25 in 63, 56 finer (5/09). (#6468)

- 661 1894 MS64 PCGS.** Softly lustrous beneath gold-gray and rose patina with deeper outlines at the devices. Minimally marked, aesthetically appealing, and elusive so fine. Population: 25 in 64, 25 finer (6/09). (#6468)

Patinated Gem 1895 Half Dollar

- 662 1895 MS65 PCGS.** Golden-brown and gunmetal-blue enrich this lustrous and attractively preserved Gem. The strike is pinpoint-sharp, even on the fletchings and shield corners. An impressive Gem example of this conditionally rare silver type. Population: 18 in 65, 6 finer (5/09). (#6471)

Colorful Gem 1902 Half Dollar

- 663 1902 MS65 NGC.** Despite a mintage of over 4.9 million pieces, the 1902 half dollar is a rarity in Gem and better grades, since it was little-saved at the time of release. This example has strong and satiny luster beneath colorful toning, gold and silver-gray at the central obverse with blue-green and violet shadings elsewhere. Census: 8 in 65, 8 finer (6/09). (#6492)

Elusive 1904-O Half Dollar, MS65
Ex: Friend

- 664 1904-O MS65 PCGS. CAC. Ex: Friend.** This is among the few times that we have offered a Gem MS65 example of the challenging 1904-O Barber half dollar in any of our auctions since January 1993. Dale Friend's Gem is nearly equal to the Price and Eliasberg coins, and similar to the Pryor-Hugon coin in quality. The obverse has medium gold toning that deepens slightly near the border. The reverse has lighter ivory color with peripheral gold at the upper half of the border. It is quite boldly defined with slight weakness only at the junction of the wing and right shield border. A single small mark on the cheek prevents a higher grade. Population: 5 in 65, 6 finer (5/09).
Ex: Dale Friend #2 All-Time PCGS Registry Set of Barber Half Dollars (Heritage, 1/2009), lot 3894, which realized \$10,350. (#6499)

Semiprooflike 1906-S Half Dollar, MS64

- 665 1906-S MS64 PCGS.** Whispers of olive-green, purple, gold, and ice-blue patina cover both sides of this near-Gem, each of which shows bright, semireflective fields. A strong strike gives strong definition to the design features, save for minor softness on the arrow feathers and adjacent claw, and in the upper right shield corner. Precluded from Gem status by a few minute marks. Population: 32 in 64, 17 finer (6/09). (#6507)

Exquisite Gem 1907-D Barber Half

- 666 1907-D MS65 PCGS.** Potent luster sweeps across this gorgeously preserved Gem. Wisps of golden toning visit each side. The fletchings are typically brought up, but the overall strike is good. The mintage of the 1907-D appears sufficient at 3,856,000 pieces, but few were set aside, and most survivors are well worn. Population: 15 in 65, 12 finer (6/09). (#6509)

Handsome Gem 1909 Barber Half

- 667 1909 MS65 NGC.** Although the 1909 is plentiful by the standards of this conditionally scarce series, it emerges as a rarity at the MS65 level. Both fields are splendidly unabraded, and cartwheel luster overwhelms the light gunmetal-gray toning. Well struck aside from the fletchings. Census: 24 in 65, 6 finer (5/09). (#6516)
- 668 1910 MS64 NGC.** Delicate tan toning visits the obverse, but the reverse is essentially brilliant. Crisply struck and highly lustrous with a splendidly smooth reverse and a thin mark on the cheekbone. Census: 30 in 64, 9 finer (5/09). (#6519)
- 669 1913-S MS64 PCGS.** This conditionally elusive near-Gem displays remarkably attractive surfaces for the grade, with few marks, smooth mint luster, and even pearl-gray coloration. The '13-S Barber half is surprisingly scarce at this grade level. (#6529)
- 670 1915-S MS65 PCGS.** From the final year of production of the Barber half dollar series, this San Francisco Mint specimen exhibits abrasion-free fields, intense satiny luster, and speckled red-brown and forest-green patina on both sides. A remarkable Gem with outstanding eye appeal. Population: 33 in 65, 8 finer (6/09). (#6534)
- 671 1915-S MS65 PCGS.** The ample rosy toning that graces the otherwise pale silver-gray surfaces is stronger on the obverse. A beautifully lustrous Gem example of this later San Francisco Barber half. Population: 33 in 65, 8 finer (6/09). (#6534)

PROOF BARBER HALF DOLLARS

- 672 1894 PR64 PCGS.** Sharply struck and free of contact marks, the surfaces overall display a richness of color and originality that is virtually impossible to duplicate. The obverse is blanketed in deep purple-rose and electric-blue coloration. The reverse shows the same electric-blue and purple-rose patina, intermixed with golden-orange. (#6541)
- 673 1898 PR64 NGC.** Lovely emerald-green and rose-red toning intermingles across each side of this precisely struck Choice proof. A prize for the connoisseur of patinated silver coinage. A meager 735 proofs were struck. (#6545)

Charming Gem Proof 1904 Half

- 674 1904 PR65 PCGS.** This brilliant-era proof issue of 670 pieces is available through Choice, but Gem and finer examples are elusive. The elegant and pleasingly preserved survivor offered here has rich gold-orange toning with sea-green and blue peripheral accents over strongly mirrored surfaces. Great eye appeal. Population: 25 in 65, 20 finer (6/09). (#6551)

- 675 **1905 PR64 PCGS.** An impressive near-Gem proof with a fully brilliant obverse and a reverse that reveals slight frost on the devices. The striking definition is razor-sharp on both sides, while contact marks and hairlines are absent. Several splashes of red-brown color appear on the upper right reverse. (#6552)

Surprising Gem Cameo Proof 1910 Half

- 676 **1910 PR65 Cameo NGC.** Though most of the 20th century proof Barber issues exhibit minimal contrast, the 1910 can be found with a pleasing cameo effect, as seen on this Gem. Lightly but attractively frosted central devices are boldly impressed, and profoundly reflective mirrors shine around them. Census: 3 in 65 Cameo, 20 finer (6/09). (#86557)

- 677 **1911 PR63 Cameo PCGS.** Freckles of sky-blue, golden-orange, and purple toning exhibit deeper hues on the obverse of this Select proof. Cameoed surfaces exhibit well struck devices except for the usual minor weakness at the upper right shield corner. Wispy obverse marks are mostly concealed within the toning. (#86558)

- 678 **1912 PR63 PCGS.** Sharply struck overall, even if the eagle's right (facing) talons are a bit weak. Essentially brilliant and untoned, with a small degree of cloudiness noted in the reverse fields. From a low mintage issue of just 700 pieces. (#6559)

- 679 **1913 PR63 PCGS.** The 1913 business strike has the third-lowest mintage of the series, and its scarcity in Mint State has encouraged some to instead select one of the 627 issued proofs. This example is untoned and sharply struck and has a hint of cameo contrast. (#6560)

WALKING LIBERTY HALF DOLLARS

- 680 **1917-D Obverse MS64 PCGS.** Speckled medium gray and sky-blue patina runs over both sides of this near-Gem Walker. Lustrous surfaces exhibit sharply struck devices and reveal a few minute contacts that prevent MS65 status. (#6570)

Scarce 1917-S MS64 Half Dollar With Obverse Mintmark

- 681 **1917-S Obverse MS64 PCGS.** Mottled reddish-gray patina dots the obverse while dapples of olive-green dominate the reverse. Lustrous surfaces exhibit sharply struck design elements and are minimally abraded. A low-mintage issue of 952,000 pieces and scarce in Mint State. PCGS has certified only 39 examples finer (6/09). (#6572)

Patinated Gem 1918 Walking Liberty

- 682 **1918 MS65 PCGS.** Originally toned in rich lilac-gray, russet-brown, and olive-gold, this satiny Gem has a bold strike and minimally unabraded surfaces. A souvenir of the landmark year 1918, which witnessed a devastating outbreak of influenza and the end of World War I. Population: 98 in 65, 7 finer (6/09). (#6574)

Delightful MS66 1918 Half

- 683 **1918 MS66 PCGS.** Well-defined for this earlier Philadelphia issue, particularly on the often-weak branch hand and the leading feathers of the eagle's leg. Each side is carefully preserved. Warm and inviting luster gleams beneath sumptuous toning, silver-gray at the centers with bands of gold, rose, plum, and blue along parts of the rims. Rare so fine. Population: 7 in 66, 0 finer (6/09). (#6574)

- 684 **1918-S MS63 PCGS.** Satiny and typically struck, with an even layer of blue-gray toning over each side confirming the originality. Specks of russet and olive patina are likewise noted on both sides. Free of distracting marks. (#6576)

Smooth MS63 1919 Walker

- 685 **1919 MS63 PCGS.** This half dollar has smooth surfaces with coruscating luster and only a glimpse of gold toning. The strike is sharp, particularly on Liberty's head and branch hand. Although examples with finer third party grades can be acquired, the present piece has exceptional eye appeal for the MS63 level. (#6577)

Wonderful MS65 1919 Half Dollar

- 686 **1919 MS65 PCGS. CAC.** One of the few issues with a mintage under 1 million pieces, the 1919 half dollar is accorded a substantial premium at all Mint State levels, though it does not approach the status of a condition rarity until the MS65 designation. This strongly lustrous Gem is well struck, with pleasing crescents of golden peripheral toning. Population: 51 in 65, 23 finer (6/09). (#6577)
-

Delightful Select 1919-D Half

- 687 **1919-D MS63 PCGS.** As Paul M. Green wrote about the 1919-D half dollar in his *Item of the Week* column published in the April 8, 2008 edition of *Numismatic News*, "It had a mintage of 1,165,000, which wasn't even the lowest Walking Liberty half dollar mintage of the year. The 1919 from Philadelphia was at just 962,000." In better circulated and Mint State grades, however, the D-mint issue is far more elusive. This Select coin offers strong and complete luster on each side, necessary for grading due to the characteristic weakness through the centers. Soft silver-white color shows glimpses of tan near the rims. (#6578)
-

- 688 **1929-D MS64 PCGS.** Maroon and gold-brown colors occupy the reverse borders of this lustrous near-Gem Walker. A few obverse marks prevent Gem status. (#6589)

- 689 **1933-S MS64 NGC. CAC.** Soft golden-orange patina concentrates mostly at the obverse margins of this radiantly lustrous near-Gem. Both sides offer sharply struck devices. Light marks preclude Gem classification. (#6591)
-

Important 1933-S Half, MS65

- 690 **1933-S MS65 PCGS. CAC.** An important date, considered the last date of the early series by some, and the first date of the late series by others. Pale gold surfaces and peripheral iridescence accompany the exquisite strike, soft luster, and pristine fields of this beautiful half dollar. (#6591)
-

- 691 **1934-S MS64 NGC.** Dazzling luster exudes from the essentially untuned surfaces of this attractive near-Gem. A solid strike imparts strong detail to the devices, including the branch hand and gown lines. Occasional marks deny Gem status. (#6594)
-

Outstanding 1937-D Half, MS67

- 692 **1937-D MS67 PCGS. CAC.** One of just 66 Superb Gems from the combined certified populations of both major services (5/09). This MS67 piece, housed in a green label holder, has brilliant surfaces throughout. Sharply struck central devices and smooth fields are equally well-preserved. An interesting and desirable Denver half. (#6602)
-

Pleasing 1937-S Fifty Cent, MS67

- 693 **1937-S MS67 NGC. CAC.** While slightly scarce in Mint State, 1937-S half dollars become rare in the MS67 level of preservation. The lustrous surfaces of this Superb Gem are wonderfully toned in shades of gray, champagne, purple, and reddish-orange. The strike is typical, however, in that the central areas are weak. The only blemish of note is a milling mark concealed in the drapery of Liberty's outstretched arm. Census: 12 in 67, 0 finer (5/09). (#6603)
-

Well Struck MS67 1937-S Walking Liberty

694 1937-S MS67 PCGS. CAC. Walking Liberty halves from San Francisco have a deserved reputation for soft strikes, particularly on the head, the branch hand, the skirt lines, and the eagle's feathers on the left border of the right (facing) leg. But here is an S-mint Walker with exceptional detail on those usually mushy areas. In addition, the lustrous and unabraded surfaces offer lovely copper-gold and olive toning. Population: 18 in 67, 0 finer (6/09). (#6603)

695 1938-D MS65 PCGS. CAC. This lustrous Gem, housed in a green label holder, has soft silver-gray luster across each side with hints of peripheral orange. Well struck for this low-mintage issue, though the centers show a degree of the usual softness. (#6605)

696 1938-D MS66 NGC. CAC. Dapples of reddish-gold, purple, and golden-tan patina visit the highly lustrous surfaces of this Premium Gem. A well defined piece with sharply incised gown lines and a partially delineated thumb on the branch hand. Devoid of significant marks. (#6605)

697 1938-D MS66 PCGS. A light coating of creamy ivory-gray toning covers each side. Well struck with a couple of insignificant milling marks on the reverse, but no severe blemishes on either side. A slight degree of russet-red, green, and gold patina decorates the peripheries. (#6605)

698 1938-D MS66 PCGS. CAC. Pale blue and gold elements visit the pleasingly lustrous surfaces of this Premium Gem. Excellent eye appeal, though the strike is a trifle soft at the centers. PCGS has graded 23 finer pieces (5/09). (#6605)

699 1941 MS67 ★ NGC. An impressive Superb Gem, about 85% brilliant on the obverse and 100% brilliant on the reverse. Both sides have frosty silver luster, and the obverse is splashed with iridescence. NGC has only certified 16 numerically finer examples (6/09). (#6611)

700 1941-S MS66 NGC. An incredible Premium Gem of this conditionally scarce issue with brilliant and frosty minimally abraded silver surfaces. Better struck than most examples, although some central weakness is noted. (#6613)

701 1942-S MS66 NGC. Other than a slight degree of weakness over the centers, which seems unavoidable for examples of this late San Francisco issue, this Premium Gem is well struck and shows a lovely satin sheen across untuned silver-white surfaces. Expertly preserved and nearly pristine on both sides. (#6617)

702 1944 MS67 NGC. A frosty and fully brilliant Superb Gem, this piece is tied for the finest that NGC and PCGS have ever graded. It is boldly detailed with only slight central weakness. Census: 73 in 67, 0 finer (6/09).
From The Bay State Collection, Part One. (#6621)

703 1944-S MS66 PCGS. CAC. Cobalt-blue, purple, and reddish-gold patination concentrates at the margins of this radiantly lustrous S-mint representative. Generally well struck save for the usual weakness in the centers. A few minor grade-consistent marks do not disturb. (#6623)

704 1945-D MS67 ★ NGC. CAC. Golden-orange peripheral toning on the obverse cedes to soft lilac in the centers, which also covers most of the reverse. A well executed strike leaves strong detail on the design elements, and pleasing luster is visible on each side. A few minor obverse marks are noted. Outstanding eye appeal is recognized by both the Star and CAC green label designations. Census: 4 in 67 ★, 1 finer with ★ (6/09). (#6625)

705 1947 MS67 NGC. Never have NGC or PCGS certified a finer 1947 Walking Liberty half dollar. This Superb Gem is highly lustrous with frosty surfaces beneath Lemon-yellow, gold, violet, blue, and iridescent toning. It is nicely defined with excellent thumb detail. (#6630)

PROOF WALKING LIBERTY HALF DOLLARS

Popular PR66 1936 Half

706 1936 PR66 NGC. This gleaming Premium Gem is essentially silver-white with just a hint of frostiness on the central devices. Gleaming mirrors and crisp detail combine for amazing eye appeal. A great example of this famous first proof Walking Liberty half, which has a mintage of just 3,901 pieces. NGC has graded 74 numerically finer examples (6/09). (#6636)

707 1937 PR67 NGC. CAC. Untuned surfaces exhibit boldly struck design features. Excellent eye appeal, aptly recognized by the CAC green label. (#6637)

708 1938 PR67 NGC. This brilliant Superb Gem is an exceptional piece with pristine surfaces. Both sides are fully white with no evidence of toning. Produced through an exceptional strike, this piece seems to have it all. (#6638)

709 1938 PR67 NGC. CAC. Clearly deserving the additional Cameo designation, this Superb Gem has incredible eye appeal created through a wonderful display of light iridescent toning over the fully mirrored fields and lustrous devices. (#6638)

710 1938 PR67 PCGS. Faint gold toning visits this exactly struck and undisturbed Superb Gem. The fields are reflective, although satin luster is also evident. The third lowest mintage of the proof type. PCGS has certified only 10 pieces finer (6/09). (#6638)

Flashy PR68 1938 Walking Liberty

- 711 1938 PR68 NGC.** A wonderful Superb Gem from early in the proof Walking Liberty series, this coin offers light gold toning around the reverse rim, while the obverse has just the barest suggestion of similar color. Under a loupe some microscopic grayish flecks can be discerned that cumulatively add to the color, but mentionable contact is nonexistent. Census: 50 in 68, 0 finer (6/09). (#6638)

Unimprovable 1938 Walking Liberty Half PR68

- 712 1938 PR68 NGC.** Luminous surfaces exhibit yellow-gold patina imbued with whispers of violet, golden-tan, and mint-green. The design elements are crisply defined, befitting a proof strike, and each side is impeccably preserved. The motifs display a slight amount of contrast with the fields. Census: 50 in 68, 0 finer (6/09). (#6638)

- 713 1939 PR67 NGC. CAC.** Exacting detail is seen over both sides of this Superb Gem brilliant proof Walker. Impeccably preserved throughout. (#6639)

- 714 1939 PR67 NGC.** A case could be made for a Cameo designation added to the grade of this Superb Gem proof. Both sides have full mirrors, sharp devices, noticeable contrast, and vibrant iridescent toning. (#6639)

- 715 1939 PR67 PCGS.** Delicate honey patina invigorates this intricately impressed and satiny Superb Gem. The designer's monogram was engraved by hand onto the working reverse die, undoubtedly to replace detail lost when the die was lapped. Housed in a green label holder.
Ex: Long Beach Signature (Heritage, 6/2005), lot 6504, which realized \$1,725. (#6639)

Amazing 1939 Walker, PR68

- 716 1939 PR68 NGC.** Part of a brief seven-coin series, this Superb Gem proof Walker has bold definition with exceptional eye appeal created through a combination of fully mirrored surfaces and light iridescent toning. Proof Walkers are seldom seen in such amazing quality. Census: 86 in 68, 1 finer (6/09). (#6639)

Outstanding PR68 1939 Half Dollar

- 717 1939 PR68 NGC.** Yellow-gold patination is slightly more extensive and deeper on the reverse, and both sides are accented with freckles of light brown and sky-blue. An exacting strike fully delineates the design features, and both faces are immaculately preserved. Census: 86 in 68, 1 finer (6/09). (#6639)

Extraordinary PR68 1940 Half Dollar

- 718 1940 PR68 NGC.** A wondrous type coin with a mintage of only 11,279 pieces. The fields of this piece are numismatically interesting as they display a combination of deep mirrors and a touch of slight mint frost. The mint frost actually seems to be from the heavy metal flow seen in the fields on each side. The surfaces are almost brilliant with just a bit of slight color around the margins. Exceptional quality. (#6640)

- 719 1941 PR67 NGC. CAC.** No AW initials, and so indicated on the insert. Pastel violet-blue occupies the centers of this luminous proof, framed by yellow-gold and reddish-gold at the margins. A crisply struck, wonderfully preserved Superb Gem. (#6641)

Superlative 1941 Proof Walker, PR68

- 720 1941 PR68 NGC.** The surfaces are nearly perfect on this immaculately preserved proof Walker. An original haze of pale rose and oil-slick patina is seen over each side and the deep mirrors enhance the brightness and overall attractiveness of the pale coloration that is present. Census: 63 in 68, 0 finer (6/09).
Ex: FUN Signature (Heritage, 1/2003), lot 7469, which realized \$3,220. (#6641)

- 721 1942 PR67 NGC. CAC.** Cherry-red, sun-gold, and lime-green invigorate the margins of this satiny and powerfully struck Superb Gem. The fields and devices are pearl-gray. A proof type coin with exemplary eye appeal. (#6642)

Brilliant, Pristine PR68 1942 Half

- 722 1942 PR68 NGC.** The 1942 proof half is a logical choice for the type collector. It has the largest mintage in the seven-date series, but it is still small with only 21,120 pieces minted. This example is completely brilliant, and the fields are well mirrored on each side. An essentially flawless proof striking of this always-popular proof type coin. (#6642)

FRANKLIN HALF DOLLARS

Lustrous 1949-D Half, MS66 Full Bell Lines

- 723 1949-D MS66 Full Bell Lines PCGS.** The 1949-D half is readily available through the Gem level of preservation, even with Full Bell Lines. The '49-D Full Bell Lines certified population drops significantly at the Premium Gem level, however, and higher-grade specimens are virtually unobtainable. Soft violet and lemon-yellow coloration invigorates the highly lustrous surfaces of this MS66 coin. Exquisitely struck and nicely preserved. Population: 20 in 66 Full Bell Lines, 0 finer (6/09). (#86654)

- 724 1951-D MS66 Full Bell Lines PCGS.** Dappled purple, blue, green, and brown patination runs over the lustrous surfaces of this sharply struck Premium Gem. Some faint pinscratches in the left obverse field and on the bell are noted for complete accuracy. Population: 63 in 66 Full Bell Lines, 0 finer (5/09). (#86659)

- 725 1952-D MS66 Full Bell Lines PCGS.** Light silver-gray centers cede to yellow and orange near the rims, with the toning more prominent on the obverse. This strongly struck Premium Gem offers great eye appeal. PCGS has graded only one finer Full Bell Lines coin (5/09).
From The Sonoma Collection. (#86662)

PROOF FRANKLIN HALF DOLLARS

Exemplary PR68 ★ 1950 Franklin Half

- 726 1950 PR68 ★ NGC.** Every proof Franklin half collector is aware that the 1950 has the lowest mintage of the type and is rare in exceptional preservation. The present Superb Gem is brilliant, and the obverse displays moderate cameo contrast. The fields are undisturbed, and the strike is full except for the Roman numerals on the bell. Among those undesignated as Cameo this is the single finest NGC has certified, as the other two PR68 pieces lack a Star designation (5/09). (#6691)

- 727 1950 PR66 Cameo NGC.** The fields are well mirrored with medium frosting on the devices and a fully snow-white, untoned appearance overall. An elusive Premium Gem Cameo example from the first proof Franklin half dollar issue.
From The Sonoma Collection. (#86691)

- 728 1951 PR67 Cameo NGC.** This lovely example has wisps of heather toning over bright silver surfaces. Excellent preservation and moderate contrast. Neither NGC nor PCGS has graded a numerically finer Cameo coin (5/09).
From The Sonoma Collection. (#86692)

PROOF KENNEDY HALF DOLLARS

- 729 1964 Accented Hair PR67 Deep Cameo PCGS. FS-401. Type One Reverse.** Millions of proof 1964 Kennedy halves were struck, but the earliest are in demand, as they represent the very scarce and ephemeral Accented Hair subtype. Icy devices favorably compare with prominently mirrored fields. Population: 17 in 67 Deep Cameo, 8 finer (6/09). (#96801)

- 730 1964 Accented Hair PR67 Ultra Cameo NGC. FS-401. Type One Reverse.** Outstanding white-on-black contrast exists between the needle-sharp devices and the glassy fields. The preservation is exceptional, as is the eye appeal. Census: 14 in 67 Ultra Cameo, 10 finer (6/09).
From The Bay State Collection, Part One. (#96801)

EARLY DOLLARS

B-5, BB-27 1795 Three Leaves Dollar, XF Details

- 731** 1795 Flowing Hair, Three Leaves—Repaired, Whizzed—NCS. XF Details. B-5, BB-27, R.1. The diagnostic diagonal bar in the field left of Liberty's top hair curl is plainly visible. Both sides have whizzed surfaces with the characteristic pebbled or matte appearance. A few minor scratches are visible on each side, although the nature of repair described by NCS is difficult to determine. (#6852)

Two Leaves Variant 1795 Flowing Hair Dollar Fine 12, B-2, BB-20

- 732** 1795 Flowing Hair, Two Leaves Fine 12 PCGS. B-2, BB-20, R.3. The centers are stone-gray, but the remainder of this Flowing Hair dollar is deep gunmetal-gray. All legends are sharp, and glimpses of inner design detail remain. No marks are visible to the unaided eye, and a strong loupe locates only trivial abrasions. (#6853)

Charming Fine 15 Flowing Hair 1795 Dollar, B-1, BB-21

- 733** 1795 Flowing Hair, Two Leaves Fine 15 PCGS. B-1, BB-21, R.2. A problem-free pearl-gray example with infrequent hints of faded tan-gold. Abrasions are inconsequential for the grade, and this is a piece worthy of the dedicated early type collector. STATES is softly brought up and displays a few faint mint-made adjustment marks. (#6853)

Very Fine 1795 Flowing Hair Dollar B-1, BB-21, Two Leaves

- 734** 1795 Flowing Hair, Two Leaves VF20 ANACS. B-1, BB-21, R.2. A familiar Two Leaves variety, along with B-2 and B-4. Golden-brown and gunmetal-blue shades alternate across this nicely detailed Flowing Hair type coin. The toning is slightly streaky near the wreath stems. Both sides are bereft of remotely reportable abrasions. (#6853)

Bold VF 1795 Flowing Hair Dollar Better B-9, BB-13 Variety

- 735** 1795 Flowing Hair, Two Leaves VF20 PCGS. B-9, BB-13, R.4. Bowers-Borckardt Die State II, with prominent clash marks on the field near the portrait. A better die marriage of this popular crown-size early silver type coin. Deeply toned cobalt-blue and tan-brown. A few delicate abrasions appear in the field near the chin, and the obverse margin has the occasional light adjustment mark, as made. (#6853)

1795 Draped, Centered Bust Dollar, B-15, BB-52 Die State IV, VF Details

- 736** 1795 Draped Bust, Centered—Improperly Cleaned—NCS. VF Details. B-15, BB-52, R.2. Die State IV. On this well-known and available variety, the draped bust of Liberty is well centered in the obverse die, and the highest wave of hair is under the E in LIBERTY. There are six berries on the olive branch. The obverse triangular break in Liberty's hair has extended upward into a knifelike point, and the remnant of a crack is visible near the first S in STATES and the tops of the adjacent branch leaves under STA, all of which confirm the die state.

Fine hairlines show up under magnification, and the semibright surfaces are retoning a soft purple color. Relatively nice detail shows on the design features. The few minute marks scattered about are in line with a large, heavy silver coin that saw moderate circulation. (#6858)

**Appealing XF 1795 Draped Bust Dollar
Centered Bust, B-15, BB-52**

- 737 1795 Draped Bust, Centered XF40 PCGS.** B-15, BB-52, R.2. Die State IV, with the die break in Liberty's hair showing a significant extension. This example of the lone Centered Draped Bust die pair is a trifle softly struck but pleasing, with rose-gray surfaces overall and gold at the worn high points. Abrasions at Liberty's neck and in the fields contribute to the grade. (#6858)

**XF45 B-15, BB-52 Centered Draped Bust
1795 Dollar With Flan Flaw**

- 738 1795 Draped Bust, Centered—Defective Planchet Obverse & Reverse—XF45 PCGS.** B-15, BB-52, R.2. Bowers-Borckardt Die State IV. The mint-made flan defect is at 5 o'clock on the obverse and opposite at 1 o'clock on the reverse. Substantial luster glimmers throughout the hair, legends, wreath, and wings. Both sides have faint traces of sun-gold and ice-blue toning with excellent eye appeal. (#6858)

**Splendid 1795 B-14, BB-51
Draped Bust Dollar, VF20**

- 739 1795 Draped Bust, Off Center VF20 ANACS.** B-14, BB-51, R.2. A splendid midgrade representative of Gilbert Stuart's Draped Bust design, with smooth light gray surfaces and iridescent toning in the fields. The reverse has some minor adjustment marks inside the wreath. The plastic holder has some stress damage that may show in the photograph, having no effect on the coin. (#96858)

**VF 1796 Large Letters Dollar
Small Date, B-4, BB-61**

- 740 1796 Small Date, Large Letters VF20 PCGS.** B-4, BB-61, R.3. Bowers-Borckardt Die State I. Chestnut-brown and olive-green enrich this scarce Draped Bust dollar. Some hair curl detail is present, although most of the eagle's plumage is worn smooth. Close study reveals a couple of thin vertical marks near Liberty's ear. A small obverse edge flaw at 4 o'clock appears to be as made. (#6860)

- 741 1797 10x6 Stars, Large Letters—Repaired—NCS.** VF Details. B-3, BB-71, R.2. Bowers-Borckardt Die State III. The eagle's breast, the right obverse field, and the reverse field near 2 o'clock have been smoothed. This steel-gray Small Eagle dollar retains ample design detail. (#6865)

Desirable 1797 B-3, BB-71 Dollar, XF40

- 742 1797 10x6 Stars, Large Letters XF40 PCGS.** B-3, BB-71, R.2. As one of three die varieties known for the date that are each a separate *Guide Book* entry, this dollar will prove popular with a wide range of collectors. Attractive gray-gold and lilac surfaces are void of any significant imperfections. (#6865)

**Pleasing 1797 B-3, BB-71 Dollar, AU50
10x6 Stars, Large Letters**

- 743 1797 10x6 Stars, Large Letters AU50 NGC.** B-3, BB-71, R.2. Only three 1797 dollar varieties are known, and each is a distinct subtype within the series of Draped Bust, Small Eagle dollars. In addition to this 10x6 Stars variety, others include the 9x7 Stars, Large Letters variety and the 9x7 Stars, Small Letters variety. A minor rim bruise is evident on the obverse at 3 o'clock, and the reverse has diagonal adjustment marks across the center from 10 down to 4 o'clock. Both sides of this pleasing AU example have considerable remaining luster with light silver surfaces and hints of pale gold toning. (#6865)

744 1798 Small Eagle, 15 Stars Good 4 ANACS. B-2, BB-81, R.3. Apparently not graded as the obverse appears to be VG, and the reverse is just AG. The surfaces are pleasing, although with a few minor imperfections, but nothing out of the ordinary for the grade. A delightful example among coins in the lower grade spectrum. (#6868)

745 1798 Large Eagle, Pointed 9, Close Date—Obverse Graffiti—NCS. VG Details. B-30, BB-116, High R.3. A scarcer variety noted for a die crack above STA in STATES and through TED in UNITED. A second broad die crack extends from the lower obverse rim through the 9 in the date. A later die state with a crack through the first A in AMERICA. Several light ancient graffiti pinscratches appear in the right obverse field. Natural light to medium gray patina displays faint bluish-purple undertones. (#6873)

746 1798 Large Eagle, Pointed 9, Close Date VF20 PCGS. B-31, BB-115, R.5. Bowers-Borckardt Die State IV. Various die cracks near OF identify this rare Bolender marriage. The strike is soft near the bust tip and opposite on the right-side reverse stars, but the tan-gray surfaces are unmarked. Certified in an old green label holder. (#6873)

**VF30 1798 Heraldic Eagle Dollar
Pointed 9, B-9, BB-121**

747 1798 Large Eagle, Pointed 9 VF30 PCGS. B-9, BB-121, R.4. The so-called "Amateur Diecutter's Reverse" that shows a misaligned star 7 that disrupts the arc arrangement of the stars. This early dollar reveals pleasing light silver-gray toning. Most of the letters in the motto show, with the exception of U of UNUM. The clouds are nicely detailed, as are most of the feathers on the eagle's wings and tail. This piece has relatively clean surfaces, with just a few light abrasions scattered about. Overall, a nice Draped Bust Heraldic Eagle dollar. (#6873)

748 1798 Large Eagle, Pointed 9, Four Berries—Mount Removed, Improperly Cleaned—NCS. XF Details. B-8, BB-125, R.2. Bowers-Borckardt Die State II. The ER in LIBERTY is tooled, but the piece has never been holed since the tail feathers opposite show no sign of repair. This slate-gray example is dull from a cleaning, but much luster remains. There are no obtrusive marks. (#6873)

749 1798 5 Stripes, Knob 9 VF20 ANACS. B-6, BB-96, R.3. A pleasing midgrade representative featuring problem-free light gray surfaces. The Knob 9 date style consists of just six individual varieties, while the Pointed 9 has 25 varieties. (#6874)

**Choice VF Five Stripes 1798 Dollar
Knob 9, B-6, BB-96**

750 1798 5 Stripes, Knob 9 VF35 PCGS. B-6, BB-96, R.3. Bowers-Borckardt Die State IV. This Choice VF Heraldic Eagle dollar is toned tan-gray with the deepest patina near the rims. All letters in E PLURIBUS UNUM are crisp. Generally free from marks; an exception is a brief, thin line on the obverse near 4:30. Population: 8 in 35, 19 finer (6/09). (#6874)

Desirable VF35 1798 Dollar, B-13, BB-108

751 1798 Large Eagle, 10 Arrows VF35 NGC. B-13, BB-108, R.3. Bowers-Borckardt Die State II without the die crack later seen along the lower left obverse border. Dusky dove-gray and tan toning blends throughout this Choice VF early dollar. The strike is slightly soft at the centers, but the wings and hair offer plentiful detail. No marks merit individual mention. (#6876)

752 1798 Large Eagle, Wide Date, Pointed 9 VF20 PCGS. B-23, BB-105, R.3. On the obverse, 8 in the date firmly touches the bust, and star 7 points directly at the lower left serif end of L in LIBERTY. On the reverse, there are five small berries on the branch, the two above being closest together; a leaf point is under the left foot of I in AMERICA. Soft grayish-gold, lavender, and sky-blue toning in the fields highlights the lighter gray design elements. Nicely defined and revealing a few small marks. Light adjustment marks are visible at the left obverse border. (#6877)

**Appealing XF45 1798 Dollar, Large Eagle
Pointed 9, B-23, BB-105**

- 753** 1798 Large Eagle, Wide Date, Pointed 9 XF45 PCGS. B-23, BB-105, R.3. The obverse is distinctive for the 8 in the date touching the bust and star 13 coming close, while the Large Eagle reverse has a leaf tip under the left foot of the I in AMERICA and the lowest arrowhead under the center of the N in UNITED. This minimally marked Choice XF example is primarily gold-gray at its base with ample rose, orange, and violet overtones. Luminous and only lightly circulated. (#6877)

- 754** 1799 7x6 Stars—Cleaned—ANACS. VF Details, Net VF20. B-9, BB-161, R.1. Bowers-Borckardt Die State III. A moderately bright stone-gray early dollar. The fields are cloudy with hairlines, and a few faded marks are noted near the forehead. (#6878)

- 755** 1799 7x6 Stars—Improperly Cleaned—NCS. VF Details. B-5, BB-157, R.2. Bowers-Borckardt Die State III. Powder-blue, golden-brown, and mauve toning embraces this granular and somewhat bright Heraldic Eagle dollar. The rims are filed, and thin tooling marks are noted on the bust truncation and the 99 in the date. (#6878)

Vibrant 1799 B-11, BB-161 Dollar, XF Details

- 756** 1799 7x6 Stars—Improperly Cleaned—NCS. XF Details. B-11, BB-161, R.3. Cleaned and retoned, now with deep iridescence on the obverse and vibrant gold on the reverse. The details are in line with an AU grade, in our opinion, with quite a bit of luster still visible, especially on the reverse. (#6878)

**AU 1799 7x6 Stars Draped Bust Dollar
Rare B-18, BB-154 Pairing**

- 757** 1799 7x6 Stars AU50 PCGS. B-18, BB-154, R.5. A bold die crack from the left (facing) shield point to the rim between the ED in UNITED identifies this challenging Bolender marriage. Glimpses of almond-gold overlie cream-gray fields and devices. Circulation wear is minimal, and luster beckons from the hair and plumage. Housed in a green label holder. (#6878)

Luminous 1799 B-15, BB-152 Dollar

- 758** 1799 Irregular Date, 13 Stars Reverse PCGS Genuine. B-15, BB-152, R.3. The Irregular Date obverse is mated with the Blundered Stars reverse, the only 1798 reverse that continued in use with a 1799 obverse. Both sides are deeply toned with teak-brown environmental effects outlining the obverse details and several minor scratches present on the reverse. (#6880)

**Appealing AU58 1799 8x5 Stars Dollar
B-23, BB-159**

- 759** 1799 8x5 Stars AU58 NGC. B-23, BB-159, R.4. Die State II. This intermediate die state example has an intermittent die crack from the left top of E through the lower right curve of B and into the field below that letter. Although called a crack, it actually has the appearance of a series of tiny die chips. Although below the Condition Census for the variety, this is an exceptional example with nearly full satiny luster visible beneath light gold and sky blue toning. With eight stars crowded along the left obverse border and only five to the right, the B-23 is a popular engraving error and a major *Guide Book* variety.
From The Bay State Collection, Part One. (#6881)

Impressive XF 1800 Dollar, B-4, BB-186

- 760** 1800 XF40 PCGS. B-4, BB-186, R.4. Several advanced obverse die cracks suggest the cause of the scarcity of this Bowers-Borckardt variety. Caramel-gold and pearl-gray with noticeable glimmers of luster in protected areas. The hair ribbon is lightly impressed, due to a die rotation that placed it opposite the eagle's left (facing) wing. (#6887)

Lovely 1800 B-16, BB-187 Dollar, AU55

- 761** 1800 AU55 PCGS. CAC. B-16, BB-187, R.2. A late die state with numerous minor cracks and clash marks on each side. The strike is a tad weak at Liberty's drapery and the opposing part of the reverse at the upper right. Considerable original luster shines through the pleasing lilac and iridescent toned surfaces. (#6887)

Memorable MS63 1800 Dollar
B-13, BB-193, Perfect Dies

762 1800 MS63 PCGS. CAC. B-13, BB-193, R.4. Bowers-Borckardt Die State I, perfect dies without clash marks or the die crack through the tops of the letters in AMERICA; this is the "original" B-13, since the later die states of the BB-193 were previously described in Bolender under a separate number, B-18. Q. David Bowers wrote in his 1993 reference *Silver Dollars & Trade Dollars of the United States*:

"For many years, Bolender-13 was considered to be one of the rarer varieties of 1800, while Bolender-18 was one of the more common issues. Auction data suggest that 'old' B-13 coins were about three and one-half times rarer than 'old' B-18 coins. As might be expected 'old' B-13 coins were considered to be great rarities in high grades."

While Bowers continues by suggesting that the merger of the two Bolender varieties under one Bowers-Borckardt number would lessen demand for quality examples in the early die states, collector awareness of the perfect-die examples' scarcity has not waned, particularly for coins of the highest quality.

This Select survivor combines impressive preservation with striking eye appeal. Strong luster filters through rich gold-orange, slate-blue, and rose-gray toning, and strong electric-blue color dominates the obverse rims. An apparent curling flaw in the date area is on the holder and not the coin; the most significant indicator for pedigree purposes, aside from the distinctive toning, is a small diagonal mark below Liberty's chin. (#6887)

763 1800 AMERICA! Fine 15 NGC. B-19, BB-192, R.2. The common AMERICA! variety, but only common when compared to B-11, the rare AMERICA! variety. Deeply toned surfaces are free of significant marks, with only a few scattered abrasions. (#6892)

764 1803 Small 3—Improperly Cleaned—NCS. VF Details. B-5, BB-252, R.3. Chestnut-gold and slate-gray with moderate wear on the portrait, although all letters in E PLURIBUS UNUM are bold save for PLU, which are partially present. A thin horizontal scratch near star 13 merits mention. Certainly scarcer than the B-6, BB-255 Large 3 variety. (#6900)

765 1803 Large 3—Scratched, Cleaned—ANACS. VF Details, Net Fine 12. B-6, BB-255, R.2. Bowers-Borckardt Die State II-III. Patches of hairlines are unmistakable, but despite the ANACS designation, there are no obvious scratches. The cheek and upper hair show expected wear, but nearly all of E PLURIBUS UNUM is present. (#6901)

SEATED DOLLARS

**Outstanding MS64 1843
Seated Dollar, Ex: Sweet**

766 1843 MS64 NGC. Ex: Sweet Collection. Vivid orange, rose, ice-blue, and olive colors bathe this scarce Seated dollar. Well struck, the eagle's claws, Liberty's hair, and the stars near her head all have pleasing definition, and detectable striking deficiency is limited to the top of the eagle's left (facing) wing. Study of the moderately prooflike surfaces reveals no obtrusive abrasions, though we mention short horizontal marks beneath the cap and near star 6 for pedigree purposes. Census: 7 in 64, 0 finer (6/09). Ex: Rod Sweet Collection (Bowers and Merena, 7/2005), lot 1038, which realized \$12,075. From The Bay State Collection, Part One. (#6929)

767 1844 AU53 NGC. Breen-5431. The business strike dollars of 1844 are noteworthy because each vertical shield line is composed of four stripes instead of the usual three, a feature that is considered to be the result of die doubling (David Bowers, 1993, Volume 1, p. 647). The right shield border also shows three lines instead of the usual two. Traces of luster are visible in the protected areas of this light silver-gray AU53 specimen. Well defined and minimally abraded. (#6930)

768 1845 XF45 PCGS. Bluish-gray patina embraces both sides of this Choice XF specimen, each of which reveals just a few minor circulation marks. The design motifs are nicely defined. (#6931)

769 1846 AU58 PCGS. Aside from the 1859-O and 1860-O, No Motto seated dollars are rare in near-Mint condition or better. This example has partial mint luster and a consistent strike. Both sides lack heavy abrasions. (#6932)

Pleasing 1846-O MS62 Dollar

770 1846-O MS62 NGC. This was the first branch mint Seated Liberty dollar and one of just four dates coined at the New Orleans Mint. The 1846-O is also rare in Mint State. Partially prooflike fields highlight the motifs, and splashes of violet and orange patina cover both sides. The hair atop Liberty's head is a trifle soft, but the remaining design elements are well struck, including the eagle's head and claws, areas that are often weak. Milling marks in the right obverse field limit the grade. Pleasing overall for the grade designation. Census: 8 in 62, 2 finer (6/09). (#6933)

Delightful AU55 1850 Seated Dollar

771 1850 AU55 PCGS. From 1849 to 1850, production of Seated dollars dropped sharply, and in the latter year, Philadelphia coined just 7,500 business strikes, a low for the general-circulation series to that time. This faintly gold-tinged silver-white beauty is remarkably lustrous with only trifling wear across the high points, though a number of scattered abrasions are present in the fields. Population: 34 in 55, 48 finer (5/09). (#6937)

Lightly Toned 1850 Dollar, MS61

772 1850 MS61 PCGS. The surfaces of this MS61 dollar are semiprooflike, as virtually always seen. A relatively sharp strike characterizes the design elements, except for the hair atop Liberty's head and the stars along the right border. Soft champagne-gold and sky-blue patina adheres to each side. Some light contact marks are visible on both faces. Population: 13 in 61, 15 finer (6/09). (#6937)

Stunning 1857 Dollar, MS64 ★

- 773 1857 MS64 ★ NGC.** Ex: La Jolla Collection. Stunning electric-blue, purple, and gold-orange toning gravitates to the margins of this near-Gem, leaving the central areas color-free. Sharply struck save for the usual softness in the hair on Liberty's head and the stars at the upper and right border. A few light marks deny a higher numerical grade, but the Star designation confirms the lovely eye appeal. Census: 1 in 64 ★, 0 finer with Star (6/09). (#6945)

Notable MS64 1859-O Seated Dollar

- 774 1859-O MS64 NGC.** An elegant near-Gem representative of this popular antebellum Seated dollar issue, impressively lustrous with an above-average strike. Delicate gold-orange and silver-gray shadings drape most of each side, while small areas of brilliance appear elsewhere. Light abrasions in the reverse fields account for the grade. Census: 25 in 64, 1 finer (6/09).
From The Bay State Collection, Part One. (#6947)
- 775 1860-O MS60 NGC.** A lovely, original Seated Liberty dollar with satiny surfaces and full mint luster beneath attractive iridescent toning. Possibly from the 1960s Treasury hoard that included a small number of 1859-O and 1860-O silver dollars. (#6950)
- 776 1860-O MS62 NGC.** This New Orleans No Motto type coin has vibrant luster, a good strike, and only a hint of gold patina. The obverse is pleasing for the grade, and the reverse is clean aside from an abraded upper field. The 0 in the date is lightly repunched north. (#6950)

Elusive Gem 1864 Seated Dollar

- 777 1864 MS65 NGC.** This is a gorgeous Gem Seated dollar from a rare, low-mintage date in the series. Just 30,700 pieces were produced in the last full year of the Civil War, when the hoarding of silver coinage was still commonplace. As a result, survivors are scarce at all grade levels. This piece is well struck, with only the slightest trace of weakness apparent on Liberty's head. The lower half of the obverse is untuned and brilliant, with a rich satiny sheen, while an arc of dramatic, deep cobalt-blue and red-brown toning occupies the upper obverse. The reverse shows a more uniform coating of electric-blue and charcoal-gray. Both sides are well preserved and lack obvious marks. Census: 8 in 65, 0 finer (5/09). (#6954)
- 778 1865 PCGS Genuine.** This Civil War Seated dollar has little if any circulation wear and is from a mintage of only 46,500 pieces. The obverse is apricot and olive-gray, while the reverse is copper-gold and sea-green. The PCGS Genuine code of 91 corresponds to "Questionable Color." The subdued fields are lightly hairlined and have a few tiny digs, near stars 4 and 11 and the eagle's right (facing) wingtip. (#6955)

Scarce 1872-S Seated Dollar, AU55

- 779 1872-S AU55 PCGS.** A scarce With Motto date with an original mintage of only 9,000 pieces. Both sides offer light mauve-gray and mottled olive-green patina and relatively clean surfaces for the grade. There is modest friction, and a few minor marks appear on the obverse. Perhaps lightly cleaned at some point in the past. This briefly circulated Choice AU specimen will make a nice addition to any collection. Population: 11 in 55, 10 finer (6/09). (#6970)

PROOF SEATED DOLLARS

Appealing 1859 Seated Dollar, PR62

- 780 1859 PR62 NGC.** Sharply struck with an attractive layer of greenish-brown and gold-gray toning over each side. The surfaces are nicely preserved and only show a small number of faint hairlines that limit the grade. From this issue's low mintage of 800 coins, only about 450 are believed to have been sold, leaving 350 pieces to be melted eventually. (#7002)

Impressive PR65 1868 Seated Dollar Ex: Pittman

- 781 1868 PR65 NGC.** Ex: Pittman. A lovely, deeply reflective Gem proof that is characteristic of the type of coin that John Pittman favored. While not an especially rare date, although the mintage of 600 proofs might belie it, this is a superior example. The devices show pinpoint definition, and each side has mottled rose and blue toning. Just a bit of cameo contrast is seen on both obverse and reverse. Ex: Herdegen Sale (Hans Schulman, 12/1973), lot 999, where it brought \$900; Pittman II (Akers, 5/1998), lot 1696, where it brought \$7,700. (#7016)

Delightful 1870 Seated Dollar, PR64 Cameo

- 782 1870 PR64 Cameo NGC.** A beautifully contrasted representative of this later proof Seated dollar issue, faintly toned gold-gray over the impressively reflective fields. Substantial frost across the sharply struck devices completes the notable cameo effect. Aside from a few faint hairlines in the fields, a delightfully preserved specimen. Census: 7 in 64 Cameo, 14 finer (5/09). (#87018)

- 783 1870 PR64 Cameo NGC.** Remarkably appealing for the grade assigned, with only a handful of trivial faults visible on each side. Minimally toned centers offer powerful contrast between the mirrors and the boldly frosted devices, while the rims offer delightful sun-orange patina. Census: 7 in 64 Cameo, 15 finer (6/09). From *The Bay State Collection, Part One*. (#87018)

Attractive 1872 Seated Dollar, PR63

- 784 1872 PR63 PCGS.** This is a sharply struck specimen with a deep coating of obviously original brownish-green patina across both sides. Substantial semiprooflikeness remains evident in the fields beneath the rich toning. Carefully preserved and free of heavy marks or noticeable hairlines. (#7020)

TRADE DOLLARS

Near-Gem 1874 Trade Dollar

- 785 1874 MS64 PCGS. CAC.** No period after FINE. 1874-dated Trade dollars from all three mints come with and without a period after FINE, for no known reason. Lustrous and lightly toned with a nice strike and a few delicate field grazes on each side. Most pieces were exported to Asia, and Uncirculated examples are very scarce. Population: 25 in 64, 7 finer (6/09). (#7034)

- 786 1874-S MS62 NGC. Breen-5785. Large S.** No period after FINE. This lustrous silver type coin has light to medium caramel-gold toning and is surprisingly free from abrasions. Liberty's hair is typically defined, and a few of the peripheral stars show soft centrils. (#7036)

Impressive 1874-S Trade Dollar, MS64

- 787 1874-S MS64 NGC. Medium S.** No period after FINE. Attractive chestnut-gold, sky-blue, and rose toning invigorates this lustrous and impressively mark-free near-Gem. Crisply struck despite a hint of softness on the eagle's right (facing) claw. Much nicer than the usual Mint State Trade dollar. Census: 20 in 64, 2 finer (6/09). (#7036)

- 788 1875-CC MS60 NGC. Type One Reverse.** Whispers of grayish-tan color are slightly more evident on the reverse of this CC-mint trade dollar. Nicely struck save for softness in Liberty's hair and the right (facing) claw. Light handling marks are visible over both sides. (#7038)

- 789 1875-S MS62 PCGS. Type One Reverse.** Brilliant and sharply struck throughout with few abrasions. This would be an excellent coin for an Uncirculated 19th century type set. (#7039)

- 790 1875-S MS62 PCGS. Type One Reverse.** Large S. Dynamic luster encompasses this lightly toned and moderately abraded silver type coin. A crisp strike save for the usual incompleteness on Liberty's hair and nearby stars. (#7039)

Pleasing 1875-S Near-Gem Trade Dollar

- 791 1875-S MS64 PCGS. CAC. Type One Obverse, Type One Reverse.** Pleasing luster emanates from both sides of this near-Gem, and a well directed strike imparts sharp delineation to the design elements save for weakness in Liberty's hair and the adjacent stars. Violet-blue and gold patina embraces each face, both of which show light roller marks. The '75-S is readily available in the lower Mint State grades (MS60 to MS63). Near-Gems are scarce and higher-grade coins are rare. (#7039)

Fabulous MS65 1876 Trade Dollar

- 792 1876 MS65 PCGS. Type One Obverse, Type Two Reverse.** Although known to be a widely saved issue, the supply of Gem examples from our nation's Centennial year is extremely limited. This lustrous, boldly struck specimen is toned in swirling violet and sea-green shades that scarcely dim the cartwheel luster beneath. Population: 19 in 65, 8 finer (5/09). (#7041)

Mint State 1876-CC Trade Dollar

- 793 1876-CC MS61 NGC. Type One Obverse, Type Two Reverse.** Tall CC. This lightly toned Carson City Trade dollar has ample luster and is void of distracting marks. The devices are nicely brought up despite slight incompleteness of detail on Liberty's cheek, shoulder, chest, and ear. Much scarcer in Mint State than its San Francisco Centennial-year counterpart. Census: 17 in 61, 21 finer (5/09). (#7042)

- 794 1877 MS63 ANACS.** An attractive Mint State piece with the usual weakness at the top four stars, but the head detail is much bolder than normal. The champagne surfaces have satiny silver luster with splashes of gold and iridescent toning. (#7044)

- 795 1877-S MS62 PCGS.** Dappled olive, lilac-gray, and green-gold elements dominate the eye appeal of this lustrous Trade dollar. Though wispy abrasions affect each side, the eye appeal suggests a finer grade. (#7046)

PROOF TRADE DOLLARS

- 796 **1875 PR62 ANACS.** Type One Obverse, Type Two Reverse. Luminous gold-gray overtones embrace each side of this crisply detailed proof. Numerous scattered hairlines and a few distributed contact marks account for the grade. (#7055)

Pleasing 1875 Trade Dollar, PR63

- 797 **1875 PR63 ANACS.** Type Two Reverse. From a mintage of 700 proofs. Golden-gray obverse toning cedes to grayish-purple with splashes of green on the reverse. A well executed strike imparts sharp definition to the design elements save for minor softness in a couple of the star centers. A few trivial marks in the right obverse field limit the grade. This is a pleasing Select proof. (#7055)

Contrasted PR64 Cameo 1877 Trade Dollar

- 798 **1877 PR64 Cameo PCGS. CAC.** Ice-white devices provide blatant contrast with the darkly mirrored fields. This fully struck specimen has only delicate field imperfections. A meager 510 proofs were struck, and many survivors undoubtedly lack the eye appeal and distinct white-on-black contrast of this piece. Population: 13 in 64 Cameo, 4 finer (5/09). (#87057)

Choice Proof 1879 Trade Dollar

- 799 **1879 PR64 NGC.** The 1,541 specimens coined at Philadelphia were the only Trade dollars minted that year, a trend that would continue through the end of the series. This Choice survivor shows pleasing contrast for a coin undesignated as Cameo, though the gold-gray toning prevalent on each side is perhaps too deep on the reverse for the coin to qualify. (#7059)

- 800 **1880 PR55 PCGS. CAC.** Whispers of violet toning reside on this lightly circulated well defined proof. Light hairlines are visible in the fields. (#7060)

Colorful PR64 1880 Trade Dollar

- 801 **1880 PR64 NGC.** This highest-mintage proof-only Trade dollar issue is readily accessible in lesser states, but beginning with the Choice level, examples become elusive. This near-Gem specimen is well-defined in the centers with strongly reflective fields beneath rich blue-green, olive, and violet patina. (#7060)

Attractive 1880 Trade Dollar, PR65 Cameo

- 802 **1880 PR65 Cameo NGC.** Splashes of cobalt-blue make appearances on the obverse of this Gem proof, while whispers of yellow-gold predominate on the reverse, accented in bluish-purple at the margins. Well struck except for Liberty's hair and adjacent stars. Excellent cameo contrast and well preserved. The highest proof mintage of any date of the Trade dollar denomination (1,987 pieces). (#87060)

Lovely PR66 Cameo 1880 Trade Dollar

- 803 **1880 PR66 Cameo NGC.** Despite a mintage of nearly 2,000 pieces, the 1880 proof issue is more elusive in high grades than a handful of other dates with lower mintages. This Premium Gem is a coin of obvious quality, with gleaming silver-white fields and moderately contrasting, impressively frosted devices. Planchet flaws to the right of the date do not affect the technical grade. Census: 38 in 66 Cameo, 21 finer (6/09). (#87060)

Gorgeous 1881 Trade Dollar, PR64

- 804 1881 PR64 PCGS. CAC.** A delightful example with fully mirrored fields and sharp, lustrous design motifs beneath gorgeous iridescent toning across both surfaces. The proof-only Trade dollars are highly desirable and collectible, and the present piece provides excellent aesthetic appeal for the connoisseur. (#7061)

Bold 1881 Trade Dollar, PR63 Cameo

- 805 1881 PR63 Cameo PCGS.** A faint coat of champagne toning graces the obverse and reverse of this lovely cameo proof with its deep mirrors that frame the lustrous devices. This issue is the fourth of six proof-only dates from 1878 to 1883 that conclude the contemporaneous Trade dollar series. Two other clandestine issues, the 1884 and 1885, were struck at a later date. (#87061)

Popular 1882 Trade Dollar, PR63

- 806 1882 PR63 NGC.** This is an impressive example of this proof-only date, whose mintage was limited to only 1,097 pieces. The devices show almost enough mint frost to qualify as a Cameo coin. The fields are deeply mirrored, and the combination of frost and mirrors makes for an exceptionally attractive coin for the PR63 grade. Light toning is seen on the obverse, but the reverse is several shades deeper in color. (#7062)

Near-Gem Proof 1883 Trade Dollar

- 807 1883 PR64 NGC. CAC.** The dusky golden-orange toning deepens toward the margins. The strike is precise, and both sides are unabraded save for a few ticks near star 13. Minute die-doubling appears on 420 GRAINS. Proof-only—as are all Philadelphia Mint Trade dollars struck in 1878 or later—and the last readily collectible proof issue of the series, with just 979 pieces struck. (#7063)

HERITAGE MYWANTLIST™ SERVICE

A Proof 1937
Buffalo Nickel
is the next item
on your wantlist.

You have been watching prices rise for years. You have registered your desire on Heritage's exclusive MyWantlist™ service, and have been receiving automatic notification for examples in auction and inventory for twelve months. You don't want to overpay for the quality you desire, but then again, you are willing to pay what it takes for the right coin. One that meets your exacting standards. Your next step?

Visit Heritage's Permanent Auction Archives at HA.com. With your free membership, you have access to records on more than 26,000 Buffalo Nickels, including some 450 proofs dated 1937, most of them in Gem grades. Coins ranging in value up to the \$20,700 paid for a PCGS PR68 in December 2008 at Houston. Complete catalog descriptions, enlargeable full-color images, and prices realized data for every lot. All free.

We also make you this promise. If you visit HA.com for the first time, join for free, and click on the enlarged image of Lot 1018 from Auction #1118, you will wonder about two things: Why, oh why, didn't you visit this treasure trove years before, and, can the price really be free?

Come join the world's largest numismatic community today. It's free, one more fact that our 450,000+ registered bidder-members can affirm.

EARLY PROOF SET

Five-Piece 1936 Proof Set, Cent Through Half Dollar

808 1936 Proof Set PR64 to PR66 PCGS. This well matched set includes:

1936 Cent—Brilliant Finish, Type Two—PR64 Red and Brown PCGS. A salmon-pink and sun-yellow near-Gem that has only a few minute toning flecks, mostly on the reverse. Close to a full Red designation.

1936 Nickel—Satin Finish, Type One—PR66 PCGS. This needle-sharp Premium Gem exhibits iridescent powder-blue, lime-green, and caramel-gold toning. Devoid of contact; thorough evaluation beneath a loupe locates only infrequent pinpoint carbon.

1936 Dime PR65 PCGS. As with the quarter and half dollar, the lowest proof mintage of the type. An essentially brilliant Gem whose glassy fields and exactly struck devices appear nearly the same today as when the piece was struck more than 70 years ago.

1936 Quarter PR65 PCGS. A boldly struck and unabraded Gem with brilliant surfaces save for a few tiny distributed tan freckles. The key to the entire proof Washington quarter series. Collectors could purchase individual proofs at the time, and the quarter was the lowest-mintage denomination of the 1936 proof set.

1936 Half Dollar PR65 PCGS. 1936 was the peak year of the classic silver commemorative series, and most Depression-era collectors passed on the 1936 proof set. Time has shown that the proof set was a better investment than the majority of commemorative issues that competed against it that year. Many collectors may have even been unaware that a proof set was available, since none had been issued since 1915. The present well struck proof Walker appears brilliant at first glance but has a few light and dark gray freckles, mostly on the lower obverse. (Total: 5 coins)

MORGAN DOLLARS

- 809 1878 8TF MS65 PCGS. VAM-3.** The “Spiked Eye,” not a Top 100 or Hot 50 variety but one that has grown in popularity. This strongly struck and minimally toned Gem combines watery luster and strong cartwheels. Great eye appeal.

Gorgeous MS66 1878 Morgan Dollar Seven Tailfeathers, Reverse of 1878

- 810 1878 7TF Reverse of 1878 MS66 NGC.** Both sides are flashy with distinct reflectivity, though the cartwheels in the fields are too prominent for a Prooflike designation. Still, this is a coin of obvious quality and eye appeal, with light silver-gray toning overall and varying degrees of peripheral orange patina. A few tiny dots of charcoal toning are visible on the portrait. Census: 24 in 66, 0 finer (6/09). (#7074)

- 811 1878 7TF Reverse of 1879 MS65 PCGS. CAC.** A slanted top arrow feather and rounded eagle's breast identify the Reverse of 1879. The lustrous surfaces of this highly attractive Gem display deep sky-blue, lavender, and orange-gold patination on the obverse, while low intensity champagne-gold dominates the reverse, accented with sky-blue and lavender at the margins. The design elements are well defined, and just a few minor handling marks likely preclude an even higher grade. (#7076)

- 812 1878-CC MS65 NGC.** This Carson city Gem offers exquisitely struck design elements and invigorating luster. The untuned surfaces reveal a few trivial grazes. Nice overall appeal. (#7080)

- 813 1878-CC MS65 NGC.** Delicate chestnut toning confirms the originality of this lustrous first-year Carson City Morgan dollar. The strike is exacting, and the few wispy grazes on the cheek are within the parameters of its designated grade. (#7080)

Pleasing 1878-CC Dollar, MS66

- 814 1878-CC MS66 PCGS.** Probably half or more of the 2.212 million 1878-CC Morgan dollars were melted under provisions of the 1918 Pittman Act (David Bowers, 2006). This Premium Gem offering displays pleasing luster on silver-gray surfaces. Exquisitely struck throughout and minimally abraded. PCGS has seen only four pieces finer (6/09). (#7080)

Magnificent 1878-CC Morgan, MS67

- 815 1878-CC MS67 NGC.** The demand for Carson City dollars is far greater than that for any other mint. The 1878-CC is the first year of issue, adding even more pressure for high grade examples of this date. The mintage was 2.2 million pieces, and while the 1878-CC is relatively common in lower Uncirculated grades, those graded MS65 and finer, in particular, are extremely elusive. This is an absolutely splendid Superb Gem. The surfaces are nearly perfect in terms of technical preservation, and the striking details are fully detailed in all areas. Thick mint frost rolls around each side of this magnificent coin, which is brilliant throughout. Census: 9 in 67, 0 finer (5/09). *From The Sonoma Collection.* (#7080)

- 816 1878-CC MS65 Prooflike NGC.** A dazzling first-year issue from the always-desirable Carson City Mint. The untuned surfaces have no marks of any significance. Impressive prooflike fields give this piece excellent eye appeal. PCGS has certified only 15 examples finer than MS65 Prooflike (6/09). *From The Bay State Collection, Part One.* (#7081)

- 817 1878-CC MS63 Deep Mirror Prooflike NGC.** An impressive, deeply mirrored example with a moderate cameo appearance. The obverse is mostly brilliant, while the reverse has a vibrant ring of russet and cobalt-blue toning around the perimeter. Scattered luster grazes minimally affect the splendid eye appeal of this Select representative. (#97081)

Deep Mirror Prooflike Gem 1878-CC Morgan

- 818 1878-CC MS65 Deep Mirror Prooflike NGC.** Dazzling field reflectivity and an exemplary strike are attributes of this desirable Carson City Gem. The fields and devices are principally brilliant, although the margins are peach-gold. This well preserved dollar is housed in a prior generation holder. Census: 31 in 65 Deep Mirror Prooflike, 0 finer (6/09). (#97081)

Popular 1879-CC Dollar, AU55

- 819 1879-CC AU55 PCGS.** An example of the "perfect mintmark" reverse, more available than the Capped Die variety but also more popular. The gold-tinged silver-white surfaces retain considerable luster, and much of the wear on this well struck piece is restricted to the high points. The obverse is minimally marked, though a larger abrasion is noted to the left of the eagle's beak. An attractive, lightly circulated representative of this early semikey Carson City Morgan dollar that would make an excellent choice for a similarly graded date set. (#7086)

Dynamic MS63 1879-CC Dollar

- 820 1879-CC MS63 PCGS.** An attractive example of this popular earlier Carson City Morgan dollar, which had less representation in government holdings than several surrounding dates. This Select piece is well struck, with warm luster beneath hints of gold-gray patina. Aside from a few abrasions on the portrait, the coin has clean surfaces for the grade. (#7086)

Elusive MS64 Prooflike 1879-CC Morgan

- 821 1879-CC MS64 Prooflike PCGS.** An exquisitely struck representative of this second-year Carson City Morgan dollar issue, amply reflective beneath silver-gray patina. Whispers of frost grace the highest design elements of the reverse, and while a few light marks on Liberty's cheek preclude a Gem designation, the surfaces are clean overall. PCGS has graded just seven finer Prooflike pieces (6/09). *From The Bay State Collection, Part One.* (#7087)

Key Deep Mirror Prooflike 1879-CC Dollar MS62

- 822 1879-CC MS62 Deep Mirror Prooflike NGC.** The 1879-CC is noted for its difficulty to secure in Mint State, but Deep Mirror Prooflike examples are many times rarer. The present coin has dramatic field reflectivity, and the untuned surfaces enable considerable contrast between the white devices and the dark mirrors. The fields are only minimally abraded, while the cheek and the eagle's breast show numerous wispy grazes. (#97087)

1879-CC VAM-3 Dollar, Capped Die, MS60

- 823 1879-CC Capped Die MS60 NGC.** VAM-3. A Top 100 Variety. Once avoided by collectors as a little-understood variety but now embraced as a challenging overmintmark variety and key issue. This piece is satiny and boldly struck, with light silver-gray color and a fairly high number of small to moderate abrasions on each side. (#7088)

**Popular 1879-CC Capped Die Morgan
VAM-3, MS62**

- 824 1879-CC Capped Die MS62 NGC.** VAM-3. A Top 100 Variety. Die rust is prominent around the repunched mintmark, which shows a medium-sized CC punched over a smaller version. Well struck and lustrous, with satiny silver-gray surfaces that display numerous small abrasions, limiting the grade. A popular VAM variety, scarcer than the 1879-CC dollars struck from regular dies. (#7088)

High-End MS64 1879-CC Capped Die Dollar

- 825 1879-CC Capped Die MS64 PCGS.** VAM-3. A Top 100 Variety. Actually a repunched mintmark variety, with the medium CC mintmark over a smaller one, though the die chipping around the date is far more noticeable. This near-Gem is impressively lustrous with extensive violet and gold-orange toning visible on the obverse, though the reverse has only faint echoes of the other side's patina. PCGS has graded a mere eight finer examples (6/09). (#7088)
- 826 1879-O MS65 NGC.** This nearly brilliant Gem has a sharp strike and exemplary luster. Splendidly bereft of marks, and among the nicer examples of this issue, struck during the first year of New Orleans' return to coinage. NGC has graded only eight pieces in higher grades (6/09). (#7090)
- 827 1879-S MS67 ★ NGC.** Highly lustrous surfaces display a swath of medium intensity multicolored toning along the lower right obverse. Sharply struck and impeccably preserved. (#7092)
- 828 1879-S MS67 ★ NGC.** CAC. Sharply struck with assured eye appeal. The obverse shows subtle arcs of gold, violet, and aqua at the lower left, while the reverse is orange at the rims. Minimally toned otherwise. (#7092)

Stone-White MS68 1879-S Silver Dollar

- 829 1879-S MS68 NGC.** Noticeably prooflike, but undesignated as such by NGC. The icy devices are nicely struck, and both sides have only trivial imperfections. San Francisco dollars between 1878 and 1882 can come very nice, and the present Superb Gem provides further proof of their reputation for quality. *From The Bay State Collection, Part One.* (#7092)

**Finest Certified Deep Mirror Prooflike
1879-S Reverse of 1878 Dollar MS65**

- 830 1879-S Reverse of 1878 MS65 Deep Mirror Prooflike NGC.** VAM-51. A Top 100 Variety. The VAM is undesignated on the NGC holder. NGC has certified a total of only 12 '79-S Reverse of 1878 dollars as Deep Mirror Prooflike, and only the present piece is in addition a Gem. Prominently reflective fields provide noticeable contrast with the lightly frosted devices. The fields are well preserved, and the cheek has only a few faint grazes. Census: 1 in 65 DMPL, 0 finer (6/09). (#7095)
- 831 1880-CC MS65 PCGS.** This reverse displays the Slanted Arrow Feather. Wisps of barely discernible gold-tan color make occasional visits to the lustrous minimally abraded surfaces. The design elements are adequately struck. (#7100)
- 832 1880-CC MS66 PCGS.** Slanted arrow reverse. Slightly better struck than average with partial detail showing in the hair over Liberty's ear. A hint or two of light tan color visits lustrous surfaces that reveal a few minute marks. (#7100)
- 833 1880-CC MS66 NGC.** Impressive satiny luster radiates from the pale gray surfaces. The reverse is exceptionally well-preserved and there are only a few minuscule grazes on the obverse. An attractive example from the desirable CC-Mint. (#7100)
- 834 1880-CC 8 Over High 7 MS65 PCGS.** VAM-5. A Top 100 Variety. An obvious overdate with the crossbar, downstroke, base, and "ears" (upper tips) of the underdigit 7 evident. The mints struck unprecedented quantities of silver dollars during this era, and a usable die was not to be cast aside simply for bearing an obsolete date. Boldly struck, lustrous, essentially brilliant, and splendidly preserved. (#7102)

**Pleasing 1880-CC 8 Over High 7 Dollar
VAM-5, Top 100 Variety, MS66**

- 835 1880-CC 8 Over High 7 MS66 PCGS. VAM-5.** A Top 100 Variety. Remains of a 7 sit high within the second 8 in the date. The partially prooflike fields of this Premium Gem offer mild variance with the sharply struck devices. Whispers of light orange make occasional visits to the obverse portrait and the reverse fields. A few trivial grazes do not distract. Population: 67 in 66, 5 finer (5/09). (#7102)

**1880-CC 8 Over High 7 Morgan, VAM-5
Deep Mirror Prooflike Gem**

- 836 1880-CC 8 Over High 7 MS65 Deep Mirror Prooflike PCGS. VAM-5.** A Top 100 Variety. A delicately toned Gem with deeply mirrored fields on each side. The obverse and reverse devices are nicely frosted. Few Deep Mirror Prooflike examples of this variety appear on the market, and when they do, Morgan dollar collectors delight at the opportunity. Population: 6 in 65 Deep Mirror Prooflike, 1 finer (5/09). (#97103)
- 837 1880/79-CC Reverse of 1878 MS64 PCGS. VAM-4.** A Top 100 Variety. The underdigits 79 are bold beneath the 80, and the reverse has the Parallel (top) Arrow Feather style of the 1878 issues. Sharply struck silver-gray surfaces display pleasing luster. A few minor grazes deny Gem status. (#7108)
- 838 1880/79-CC Reverse of 1878 MS64 PCGS. VAM-4.** A Top 100 Variety. Traces of chestnut patina visit this lustrous and attractively preserved near-Gem. 1880/79 varieties were struck at each of the four mints, an indication of the need to coin silver purchased due to the Bland-Allison Act. (#7108)
- 839 1880/79-CC Reverse of 1878 MS64 PCGS. VAM-4.** A Top 100 Variety. Dusky gunmetal-blue, rose-red, yellow-tan, and olive-gray dominate both sides of this satiny Carson City near-Gem. Sharply struck and only lightly abraded. (#7108)
- 840 1880/79-CC Reverse of 1878 MS65 PCGS. VAM-4.** A Top 100 Variety. A virtually untuned Gem that boasts coruscating luster and a good strike. The fields are smooth, and the face has only faint grazes. (#7108)

**Sharp 1880/79-CC Reverse of 1878 Dollar
VAM-4, Top 100 Variety, MS66**

- 841 1880/79-CC Reverse of 1878 MS66 PCGS. VAM-4.** A Top 100 Variety. The underdigits 79 are bold beneath the 80, and the reverse has the parallel top arrow feather and concavity on the eagle's breast. A few whispers of gold-beige show up under magnification. Sharply struck and revealing just a few minor grazes. Population: 50 in 66, 0 finer (5/09). (#7108)
- 842 1880-O MS64 PCGS.** This fully brilliant near-Gem has sharp design features and frosty silver luster. There is no toning on either side. The MS64 grade is optimal for this issue, combining excellent quality with a reasonable price. While PCGS has certified more than 1,000 pieces at this grade, they have only examined 20 finer examples (5/09). (#7114)
- 843 1880/79-O MS63 Deep Mirror Prooflike NGC. VAM-4.** A Top 100 Variety. Micro O. Mostly brilliant, although the borders offer slender blushes of rich golden-brown toning. Flashy and well struck with scattered minor abrasions. NGC VAM-4 Census: 5 in 63 Deep Mirror Prooflike, 3 finer (6/09). (#97117)

**Lovely 1880/79-O Silver Dollar, VAM-4
MS64 Deep Mirror Prooflike**

- 844 1880/79-O MS64 Deep Mirror Prooflike NGC. VAM-4.** A Top 100 Variety. The overdate and VAM are undesignated on the NGC insert. Subtle gold-orange shadings visit the rims, while the centers are essentially silver-white. Despite light frost across the devices, this impressively mirrored Choice coin is essentially low-contrast. *From The Bay State Collection, Part One.* (#97117)
- 845 1880-S MS67 NGC.** Medium S. The obverse has an arc of brilliance, but two-thirds of that side is endowed with vivid fire-red, navy-blue, and sun-gold patina. The reverse is untuned aside from a peripheral wisp of tan. (#7118)

Formidable MS68 1880-S Silver Dollar

- 846 1880-S MS68 NGC.** Large S. This exactly struck Superb Gem appears brilliant at first glance, but upon close evaluation displays a hint of chestnut toning. A splendidly preserved example that has only the faintest signs of coin-to-coin contact on the cheek. An impressive silver type coin. (#7118)

Spectacular 1880-S Dollar, MS68

- 847 1880-S MS68 NGC.** Medium S. One expects above-average eye appeal on an 1880-S dollar, and this coin certainly delivers. The surfaces are nearly perfect on each side. There is no hint of color, and the mint luster rolls around the coin unimpeded by the smallest imperfections. The striking details are complete on both sides of this well-produced issue. (#7118)
- 848 1880/9-S MS67 NGC.** VAM-11, Medium S. A Hot 50 Variety. A hint of the former 9 is visible within the 0 in the date. This dazzling Superb Gem exhibits a sharp strike and impressive eye appeal. *From The Bay State Collection, Part One.* (#7122)
- 849 1881-CC MS66 ★ NGC. CAC.** A two-toned arc of golden-brown and navy-blue endows the lower left obverse. The remainder of this low mintage CC-mint Premium Gem has only a hint of golden-gray. Well struck and lustrous, with a particularly smooth reverse. (#7126)
- 850 1881-CC MS66 PCGS.** A fantastic Premium Gem with bold silver-white cartwheels in the fields and thick frost over the sharply struck devices. Carefully preserved and gorgeous. (#7126)
- 851 1881-CC MS66 PCGS.** Despite its relatively low mintage (296,000 pieces), the 1881-CC is readily available through MS66 due to the dispersal of former Treasury holdings. A sharp strike is apparent on the devices and pleasing luster shows on minimally abraded surfaces. (#7126)
- 852 1881-CC MS66 PCGS.** Glimpses of faint gold-beige appear under magnification. Pleasing luster, sharply defined design motifs, and minimal marks round out the excellent eye appeal of this Premium Gem. (#7126)

Smooth 1881-CC Morgan Dollar MS67

- 853 1881-CC MS67 NGC.** Intricately struck with scintillating luster and attractive surfaces. Delicate almond-gold toning visits the centers, while the margins remain untuned. The Carson City Mint struck only 296,000 silver dollars in 1881, the second lowest mintage of the series from the fabled Western facility. (#7126)

Superb Gem 1881-CC Silver Dollar

- 854 1881-CC MS67 NGC.** The low mintage of the 1881-CC has long enticed collectors, and although the GSA hoard has ensured reasonable supplies, most are clustered in MS62 to MS66 grades. Superb Gems, such as the present lightly toned and well struck example, remain very scarce. As of (6/09), NGC has certified only three pieces above the MS67 level. (#7126)
- 855 1881-S MS67 ★ NGC. CAC.** Spectacular forest-green, fire-red, orange, and sky-blue iridescence endows this lustrous and intricately struck Superb Gem. Delightful despite a couple of inconspicuous marks above the olive leaves. (#7130)
- 856 1881-S MS67 ★ NGC.** Dramatic powder-blue, lemon-gold, cherry-red, and emerald-green toning consumes the obverse. The reverse border displays honey-gold and gunmetal-gray. The strike is precise, and the marks near the date and bust tip hardly impact the eye appeal. (#7130)
- 857 1882-CC MS66 PCGS.** Whispers of barely discernible gold-tan color visit the central devices of this Premium Gem. Sharply struck, including strong detail in the hair over Liberty's ear. Lustrous surfaces display minimal abrasions. (#7134)
- 858 1882-CC MS66 NGC.** This pinpoint-sharp Premium Gem has dazzling luster, and the reverse is nearly immaculate. The obverse is also a treat, since marks are close to absent. Wisps of gold toning adorn each side. (#7134)
- 859 1882-CC MS66 NGC.** Peripheral golden-brown and ocean-blue toning ensures the eye appeal of this well struck Premium Gem. The fields are nearly unabraded and demonstrate rich cartwheel sheen. (#7134)

- 860 1882-CC MS66 PCGS.** The lustrous surfaces of this Premium Gem display an occasional hint of golden-tan color visible only under magnification. Nicely struck and devoid of significant abrasions. (#7134)
- 861 1882-CC MS66 PCGS.** A few wisps of tan-gray visit the highly lustrous, minimally marked surfaces of this Premium Gem. Well struck except for localized minor softness in the central areas. (#7134)
- 862 1882-CC MS66 PCGS.** Golden-brown and ocean-blue enrich the margins of this lustrous Premium Gem. The obverse has only moderate contact near UNUM. An attractive Carson City type coin. *From The Bay State Collection, Part One.* (#7134)
- 863 1882-CC MS65 Deep Mirror Prooflike PCGS.** Prominently mirrored fields are accompanied by lightly toned and moderately frosted devices. An attractive example of this collectible Carson City date.
Ex: Atlanta ANA Signature (Heritage, 4/2006), lot 986, which realized \$1,380.
From The Bay State Collection, Part One. (#97135)
- 864 1883 MS65 Deep Mirror Prooflike NGC.** An exquisite Gem with captivating watery fields, which show modest contrast against the frosty devices. Scattered abrasions limit the grade, but none are worthy of individual mention.
From The Bay State Collection, Part One. (#97143)
- 865 1883-CC MS66 NGC.** A magnificently preserved and minimally toned Premium Gem. Most would consider it brilliant, although delicate tan toning is discernible here and there. A popular Carson City issue that emerged in quantity from the GSA hoard. (#7144)

Impressive Superb Gem 1883-CC Morgan

- 866 1883-CC MS67 NGC.** Flashy cartwheel luster in the fields with a degree of reflectivity on each side. The solidly struck obverse offers dappled blue-green and gold toning, while the reverse is nearly brilliant. A carefully preserved and undeniably appealing survivor, tied for numerically finest graded by NGC (6/09). (#7144)

Exceptional 1883-CC Dollar, MS67

- 867 1883-CC MS67 PCGS.** A wonderful MS67 example of this popular and relatively common Carson City dollar. The surfaces are heavily frosted, as one would expect from a CC product. Each side is remarkably abrasion-free, an unusual trait on coins from this mint. The centers are mostly untuned with a slight accent of golden patina around the margins. (#7144)

Wonderful MS67 1883-CC Dollar, Ex: GSA

- 868 1883-CC MS67 PCGS.** Ex: GSA. Hints of gold color endow this highly lustrous and gorgeously preserved Superb Gem, a crisply struck and virtually unimprovable representative of this extremely popular Carson City Morgan dollar issue. While the General Services Administration sales of the 1970s provided collectors with many Uncirculated examples, nearly all of those pieces show luster grazes on the cheek and obverse field; survivors at the MS67 level are scarce. (#7144)
- 869 1883-CC MS66 Prooflike NGC. CAC.** Impressive field reflectivity accompanies frosty devices. Highly lustrous and nearly brilliant with minimal marks and minor inexactness of strike at the centers. Census: 62 in 66 Prooflike, 2 finer (6/09). (#7145)

Prooflike Superb Gem 1883-CC Dollar

- 870 1883-CC MS67 Prooflike PCGS. CAC.** The 1883-CC, like all Morgan dollars from this branch mint, is a noteworthy condition rarity in the finest Mint State grades. A decent percentage of those coins extant display a prooflike finish (NGC and PCGS have certified several thousand in all PL grades), but, once again, the number of Superb Gems is severely limited. Originally toned, the obverse is overlaid in mostly even, apricot-gray colors. The reverse, on the other hand, is more extensively patinated in mottled olive-russet and silver-gray shades that yield to swirls of electric-blue iridescence at direct angles. The glistening, reflective fields are readily evident as the coin rotates into the light, and the smooth features exhibit overall bold definition. Population: 8 in 67 Prooflike, 0 finer (6/09).
Ex: Central States Signature (Heritage, 4/2002), lot 6247.
From The Bay State Collection, Part One. (#7145)

- 871 1883-CC MS65 Deep Mirror Prooflike PCGS.** A stunning Gem with dynamic reflectivity in the fields and sharply detailed, richly frosted devices. An occasional wisp of champagne-gold color occurs on each side. A few minor contacts and grazes are well within the parameters of the numerical grade. (#97145)

- 872 1883-CC MS65 Deep Mirror Prooflike NGC.** Deeply mirrored fields show splendid cameo contrast against the frosted devices. Scattered abrasions barely affect the great eye appeal of this boldly struck example.
From The Bay State Collection, Part One. (#97145)

- 873 1883-CC MS66 Deep Mirror Prooflike PCGS.** Wisps of light gold color make an occasional appearance on this sharply struck CC-Mint example. Both sides exhibit pleasing field-motif variance and are minimally marked. (#97145)

Enchanting MS67 1883-O Morgan

- 874 1883-O MS67 PCGS.** Original almond-gold toning overlies smooth cream-gray surfaces. Booming luster and a nice strike contribute further to the eye appeal. A glass reveals inconsequential roller marks on the chin, as made. A memorable New Orleans Morgan dollar, encapsulated in a green label holder. Population: 28 in 67, 0 finer (6/09). (#7146)

- 875 1883-S MS62 PCGS.** Bright silver-white surfaces show on both sides of this well struck S-mint Morgan. Several moderate abrasions on Liberty's face and neck define the grade. (#7148)

- 876 1883-S MS63 PCGS.** An impressively detailed and flashy coin with only occasional hints of silver-gray and gold toning at the margins. Assorted light abrasions account for the grade. (#7148)

- 877 1883-S MS62 Prooflike NGC.** Prooflike essentially untoned surfaces exhibit sharply struck design features. Light surface and rim marks limit the grade. Census: 22 in 62 Prooflike, 17 finer (6/09). (#7149)

Superb Gem 1884 Morgan Dollar

- 878 1884 MS67 NGC.** The 1884 Morgan Dollar is available in Uncirculated condition, although Superb Gem examples are quite elusive. Sharply struck with fully brilliant silver surfaces and outstanding satin luster. Only a few trivial contact marks can be seen on either side. Exceptionally attractive and highly desirable. Census: 33 in 67, 2 finer (6/09).
Ex: Jack Lee Collection, III (Heritage, 11/2005), lot 3223. (#7150)

- 879 1884-CC MS64 ANACS,** well struck, brilliant, and highly attractive; **1885-CC MS63 ANACS,** lustrous and untuned with a precise strike and a pair of thin marks on the cheek; and an **1891-CC MS62 ANACS,** flashy and brilliant save for a bluish of russet near the chin, several faint facial grazes. (Total: 3 coins)

Magnificent 1884-CC Dollar, MS67 ★

- 880 1884-CC MS67 ★ NGC. CAC.** Numerous 1884-CC dollars are readily available to collectors, as a perusal of NGC/PCGS population data indicates. Indeed, the two services have certified about 2,000 coins in MS66, and around 150 in MS67. Superb Gems with the coveted Star designation, however, are elusive. Pleasing luster emanates from the untuned surfaces of this MS67 ★ offering, and a well executed strike leaves crisp definition on the design elements. Impeccably preserved throughout and displaying magnificent eye appeal. Census: 5 in 67 ★, 0 finer (5/09). (#7152)

Popular 1884-CC Dollar MS67

- 881 1884-CC MS67 PCGS.** A large number of 1884-CC dollars survive in Mint State grades, evident from the thousands certified by PCGS and NGC. The population declines precipitously in MS67, however, the condition of the present piece. Lustrous surfaces display various shades of olive-green on the obverse, while the reverse shows lighter hues of green. Well preserved throughout. Population: 54 in 67, 3 finer (6/09). (#7152)

- 882 1884-CC MS66 Prooflike PCGS.** Boldly struck with shimmering, beautifully frosty surfaces that are nearly untuned, save for a few light splashes of apricot color. Notable field-motif contrast exists on both sides. Some wispy luster grazes fail to restrict the grade of this lovely Premium Gem. Population: 88 in 66 Prooflike, 1 finer (5/09).
From The Sonoma Collection. (#7153)

- 883 1884-CC MS66 Prooflike NGC.** An eye-catching arc of lavender, aquamarine, and red-orange toning drapes the upper regions of the obverse, while the rest of this delightful coin is bright silver-gray. The powerfully reflective fields show some contrast against the frosty devices. PCGS and NGC combined have certified a mere seven Prooflike examples finer (6/09).
From The Bay State Collection, Part One. (#7153)

- 884 1884-CC MS65 Deep Mirror Prooflike NGC.** A pleasing rose and gold hue graces the obverse of this sharply struck Gem, with a few patches of faint gray toning. Peppered abrasions barely affect the outstanding deeply mirrored fields.
From The Bay State Collection, Part One.(#97153)
- 885 1884-CC MS66 Deep Mirror Prooflike NGC.** Impressive deeply mirrored fields and icy-frosted devices create a dazzling cameo appearance, accented by a hint of hazel toning around the perimeter. Several light grazes and tiny blemishes limit the grade, but barely affect the spectacular eye appeal of this razor-sharp Premium Gem. Census: 42 in 66 Deep Mirror Prooflike, 3 finer (5/09).(#97153)
- 886 1884-CC MS66 Deep Mirror Prooflike PCGS.** Yellow-gold, sky-blue, and purple coloration concentrates at the peripheries, somewhat more extensive and deeper on the obverse. A well executed strike brings out sharp detail on the minimally abraded surfaces.(#97153)
- 887 1884-O MS67 NGC.** Well-defined and essentially untuned with fantastic eye appeal. This Superb Gem offers impressive, creamy luster. NGC has graded no numerically finer examples (5/09). (#7154)
- 888 1884-O MS67 NGC.** A rich band of pumpkin-orange patina adorns the borders of this otherwise brilliant Superb Gem. This lustrous and nicely struck New Orleans Superb Gem is remarkably unabraded and provides magnificent eye appeal. The mintmark is repunched within the loop but is not VAM-6. Census: 86 in 67, 0 finer (6/09).(#7154)
- 889 1884-O MS67 PCGS.** Fantastic eye appeal for this earlier New Orleans issue. The surfaces are bright, with an essentially untuned appearance overall. It is well-defined with creamy surfaces. Despite a mintage of over 9.7 million pieces, the 1884-O is scarce in MS67 and virtually unheard-of any better. Population: 54 in 67, 1 finer (5/09).(#7154)
- 890 1885 MS67 NGC.** This appealing representative has virtually perfect fields that exhibit charming satiny luster. The strike is sharp, and there are only a few inconsequential grazes on Liberty's cheek. NGC has certified a mere five examples finer (6/09).
From The Bay State Collection, Part One.(#7158)
- 891 1885 MS66 Deep Mirror Prooflike PCGS.** Decisively struck with absolute reflectivity that comes from minimally toned surfaces. A handful of shallow flaws are visible on and near the lower part of Liberty's face. PCGS has graded just one finer Deep Mirror Prooflike example (5/09).(#97159)
- 892 1885-CC MS65 PCGS.** Autumn-gold dominates the obverse, although aqua and rose bands are also present near the lower left border. The gorgeously smooth reverse is lightly toned with freckles of pale tan.(#7160)
- 893 1885-CC MS65 PCGS.** This Gem displays silver-white surfaces with pleasing luster and sharply struck design elements. A few minor marks may well preclude an even higher grade.(#7160)
- 894 1885-CC MS65 PCGS.** Booming luster and delicate tan-gray toning combine with a good strike and an unblemished appearance. The lowest mintage Carson City Morgan issue, although collectible due to a sizeable GSA disbursement.(#7160)
- 895 1885-CC MS66 PCGS.** Untoned save for a splash of orange and blue toning at the upper left obverse. A well-defined Premium Gem with satiny, coruscant luster.
From The Sonoma Collection.(#7160)

- 896 1885-CC MS66 PCGS.** Aquamarine, fire-red, and golden-tan grace the left margins, but the remainder of this highly lustrous low mintage Carson City dollar is untuned. The reverse is splendidly preserved, and the cheek has only a few wispy grazes. (#7160)

- 897 1885-CC MS66 PCGS.** A few minor abrasions do not affect the impressive eye appeal of this lustrous Premium Gem. The strike is sharp and there is just a hint of milk-white toning in the center of each side. PCGS has certified only 39 pieces finer (06/09).
From The Bay State Collection, Part One.(#7160)

- 898 1885-CC MS65 Deep Mirror Prooflike PCGS.** Wonderful cameolike contrast jumps out at the observer of this deeply mirrored Gem. Exquisitely struck, evidenced by sharp detail in the hair over Liberty's ear and on the eagle's breast feathers. A few minor grazes likely preclude an even higher grade. A few hints of gold-tan on the central devices show up under high magnification.(#97161)

Flashy MS66 1885-CC Dollar Deep Mirror Prooflike

- 899 1885-CC MS66 Deep Mirror Prooflike PCGS.** Brilliant save for a dash of lemon-gold toning along the lower reverse periphery. Well struck and flashy with a pristine reverse. A low mintage Carson City favorite, certified in an old green label holder. Population: 40 in 66 Deep Mirror Prooflike, 2 finer (6/09). (#97161)

- 900 1885-S MS65 PCGS.** Multicolored toning takes on slightly deeper shades on the reverse of this lustrous Gem. Well struck except for the usual weakness in the centers. A few minor surface and rim marks are noted. Scarce any finer.(#7164)

Astounding MS68 1886 Dollar

- 901 1886 MS68 NGC.** The 1886 Philadelphia is one of only a handful of Morgan dollar issues that is available in MS68, though said "availability" is restricted to a baker's dozen of coins in the combined certified population (6/09). This well-defined and shining survivor is exquisitely preserved with a hint of lemon-orange peripheral toning on each side that enhances the brilliance elsewhere. (#7166)
-

Noted Conditionally Scarce 1886-O Dollar, MS63

- 902 1886-O MS63 PCGS. CAC.** The 1885-O is quite common in nice Mint State, but despite a slightly higher mintage, the 1886-O is surprisingly hard to find in AU or better condition. This is a well struck piece with exemplary luster and only a hint of tan toning. Only faint marks are present. (#7168)

Select Mint State 1886-O Morgan

- 903 1886-O MS63 NGC.** An untoned example of this interesting issue, which is common in Fine through XF but is a great rarity in MS65. The centers of the present piece are typically brought up, but the lustrous surfaces display surprisingly few marks. The reverse is particularly unabraded. (#7168)

Elusive 1886-O Morgan Dollar, MS63

- 904 1886-O MS63 PCGS.** A conditional rarity, the 1886-O Morgan dollar is generally encountered in circulated grades. Those few that exist in Mint State are likely to be certified as MS60 or MS61. Select MS63 or finer examples are highly elusive and always in demand. This piece has fully brilliant silver surfaces with bold details and frosty luster, accented by a trace of champagne toning. (#7168)

Memorable 1886-O Morgan Dollar, MS65

905 1886-O MS65 PCGS. CAC. Ex: Jack Lee 2. Some issues, such as the 1921-D half dollar, are celebrated for having the lowest mintage in a series, while others like the 1921 Peace dollar are distinguished as being a first-year issue. Sometimes it is the physical characteristics of a coin that make it special, as with 1820 N-13 large cents, which are relatively more available in high grades than other cents of that era, thanks wholly to the Randall hoard of cents found in the 1860s. The 1886-O dollar stands out as being the rarest New Orleans issue in MS65 or better condition as fewer than five Gem specimens are known to exist. The current offering belongs to that small fraternity of high-end 1886-O dollars. After more than 20 years of third-party grading, only five coins are currently documented at the MS65 level or above at both major services. NGC documents only one such coin—a lone MS66. The PCGS *Population Report* shows a total of four examples; three MS65 pieces and the famous MS67 Deep Mirror Prooflike coin that was considered by Wayne Miller in his 1982 reference to be “the most spectacular Morgan dollar now known.” That piece sold for \$231,000 in Bowers and Merena’s November 1990 sale of the Chris Schenkel collection.

But why is this seemingly common issue so rare in high grade? The mintage of over 10 million coins makes it hard to believe that so few 1886-O dollars exist in Gem condition. The 1881-S issue saw a comparable output of coins, yet *well over 100,000 examples* of that date are known in MS65 or better condition. David Bowers speculates in his *Silver Dollars and Trade Dollars of the United States* (1993): “At or near the time of striking in the nineteenth century, probably a few million coins, say two to four million, were placed into circulation and saw commercial use. Probably, millions of other coins, perhaps as many as six to eight million pieces, went to the melting pot under the terms of the 1918 Pittman Act.” Bowers continues by stating that “in MS64 grade it is extremely difficult to locate; probably somewhere between 125 and 250 remain. In MS65 preservation the 1886-O is the rarest New Orleans Mint Morgan dollar; at least one exists, but possibly no more than three.” The steep drop of survivors between MS64 and MS65 is reflected in various price guides. For example the current *Coin Dealer Newsletter* indicates a staggering 21-fold increase in price for the 1886-O between MS64 and MS65 condition—more than any other issue in the entire Morgan dollar series.

John Dannreuther and Jeff Garrett’s compilation of silver dollars sold at auction between 1995 and 2004 records not a single showing of an MS65 1886-O dollar. The landmark offering of the current example may represent one of the few appearances of this rare Gem issue in our lifetime.

Predominately white surfaces abound with intense cartwheel luster. Although known to be notoriously weekly struck, this 1886-O dollar boasts an unusually strong strike. The negligible scattered abrasions number fewer than the most conservative of graders would allow for a Gem Morgan dollar. A memorable specimen that was one of the prides of a great collector’s cabinet. Population: 3 in 65, 0 finer (6/09). (#7168)

- 906 **1886-S MS65 PCGS.** VAM-2. A Top 100 Variety. The mintmark is nicely repunched near the serifs, as is the case for many Uncirculated examples of this scarce San Francisco issue. Brilliant and lustrous with pleasing preservation and minor incompleteness of strike above the ear. (#7170)
- 907 **1886-S MS65 PCGS.** This lower mintage Gem features vibrant luster and a pleasing strike. Well preserved, both sides are close to immaculate aside from a few trivial ticks on the upper neck. (#7170)
- 908 **1887/6 MS65 PCGS.** VAM-2. A Top 100 Variety. The bottom loop of the 6 underdigit shows beneath the lower part of the 7. Bright silvery surfaces exhibit boldly struck design features, including partial detail in the hair over Liberty's ear and on the eagle's breast feathers. A few minor unimportant marks do not detract. (#7174)
- 909 **1887-O MS65 PCGS.** A few tiny areas of purple toning are the only hints of color on this otherwise bright silver-gray piece. Pleasing satiny luster gives this well-preserved Gem excellent eye appeal. PCGS has certified just eight examples finer (6/09). *From The Bay State Collection, Part One.* (#7176)
- 910 **1887/6-O MS62 PCGS.** VAM-3. A Top 100 Variety. This overdated New Orleans dollar has a remarkably high grade reverse, while the obverse displays faint marks. A hint of gold patina visits lustrous fields and devices. The centers are lightly impressed, typical for the Southern branch mint. (#7178)
- 911 **1887/6-O MS62 PCGS.** VAM-3. A Top 100 Variety. Discovered later than the 1887/6 Philadelphia overdate, and scarcer as well. The centers are soft, as usual for the variety, and the cheek has a few grazes, but this lustrous example is nonetheless pleasing for the grade. (#7178)

Deep Mirror Prooflike MS67 1888 Silver Dollar Single Finest NGC-Certified DMPL Example

- 912 **1888 MS67 Deep Mirror Prooflike NGC.** Among Philadelphia issues, the 1888 ranks among those with the most inconsistent striking characteristics. As Q. David Bowers writes in his *Guide Book of Morgan Silver Dollars*, "The 1888 rates as a common date in the Morgan series, although the quality of individual specimens can vary dramatically. Extended die use caused granularity and metal flow lines on some. On the other hand, more than just a few 1888 dollars are attractive and prooflike." This outstandingly reflective Superb Gem is one of the latter, minimally toned in the deeply mirrored fields. Subtle rose tints accent the sharply struck central devices. A beautifully preserved coin that could win over even the fussiest numismatic aesthete. Census: 1 in 67 Deep Prooflike, 0 finer (6/09). (#97183)

- 913 **1888-O MS66 PCGS.** A well-defined Premium Gem with gorgeous luster and smooth surfaces. The appearance is virtually brilliant save for hints of gold-orange at the rims. Tied for numerically finest known to PCGS (5/09). (#7184)

Rare 'Scarface' VAM-1B 1888-O Dollar MS62

- 914 **1888-O Scarface MS62 PCGS.** VAM-1B. A Top 100 Variety. Per the *Top 100* guide, "The VAM 1B is the most dramatic die break in the Morgan dollar series. Rare in all grades." A satiny dove-gray and almond-gold example with a typical strike at the centers and a few moderate field marks. Population: 17 in 62, 6 finer (6/09). (#7184)
- 915 **1889 MS66 PCGS.** CAC. Sun-gold and orange bathe the obverse, although the portrait center is untoned. The reverse remains brilliant. Lustrous and boldly struck with only a few faint obverse grazes. Nearly unobtainable any finer. (#7188)
- 916 **1889-CC VF25 PCGS.** David Bowers (2006) notes: "In worn grades the 1889-CC is also a key issue." Light gray patina covers semibright surfaces on this VF25 example. The design elements retain great detail, and marks are less severe than often seen on moderately circulated coins. An excellent fit for a midgrade Morgan collection. (#7190)
- 917 **1889-CC VF30 PCGS.** An appealing midrange representative of this popular key-date Carson City Morgan dollar, medium silver-gray with glints of gold and rose. Aside from a few flaws on the lower jaw, this piece is minimally abraded. (#7190)
- 918 **1889-CC VF35 PCGS.** An appealing Choice VF representative of this popular Morgan dollar key. Light silver-gray surfaces deepen slightly close to the rims and take on green-gold accents. *From The Sonoma Collection.* (#7190)
- 919 **1889-CC VF35 PCGS.** A remarkably attractive Choice VF example from this heavily circulated issue of 350,000 pieces. The surfaces are toned charcoal-gray over most of each side, with light silver providing contrast at the high points. The few light abrasions that are present are entirely grade-consistent. (#7190)
- 920 **1889-CC—Cleaned—ANACS.** XF45 Details. Light wear concentrates at the high points, while abrasions are scattered on each side. The margins show glimmers of original luster, although hairlines throughout the orange-accented silver-gray fields point to a past cleaning. (#7190)

1889-CC Key Date Morgan Dollar, AU50

- 921 1889-CC AU50 NGC.** The 1889-CC is an important key date in the Morgan dollar series, due to a combination of low mintage (350,000 pieces) and relatively poor survivorship. This satiny AU example is essentially untoned, with light-gray surfaces that reveal mild semiprooflikeness and wispy hairlines in the fields. Lightly worn with a few small abrasions on each side.
From The Bay State Collection, Part One. (#7190)

- 922 1889-CC—Cleaned—ANACS. AU53 Details.** This key date Carson City dollar has undoubtedly been dipped, but luster nevertheless shimmers from the borders and recessed areas of the design. There are no individually noticeable marks. (#7190)

Popular 1889-CC Morgan Dollar, AU55

- 923 1889-CC AU55 NGC.** In the entire run of Carson City Morgan dollars, the 1889-CC is the rarest in all grades. The majority of the 350,000-coin mintage entered circulation; today examples can be found from well circulated to Mint State, although the latter are rare. This lustrous Choice AU specimen has a few splashes of pale brown toning on otherwise brilliant silver surfaces. Moderate surface marks are consistent with the grade.
From The Sonoma Collection. (#7190)

Desirable MS61 1889-CC Dollar

- 924 1889-CC MS61 ICG.** The 1889-CC is not the lowest-mintage Morgan dollar (350,000 pieces struck versus a total of 228,000 coins for the 1885-CC), but it is the rarest. The vast majority of 1885-CC dollars were saved in government vaults and the 1889-CC did not have that luxury: Most of its mintage circulated to oblivion or was otherwise lost. This well-defined example never circulated, with flashy silver-white luster that shows the slightest hint of gold toning. Though a number of wispy abrasions are scattered in the fields, the eye appeal of this coin is far above the norm. (#7190)
-

Select Mint State Key 1889-CC Dollar

- 925 1889-CC MS63 NGC.** Many thousands of collectors are presently working on their set of Carson City Morgan dollars. The dates prevalent in the 1970s GSA auctions (1878-CC, 1880-CC through 1885-CC, 1891-CC) are obtained readily, and semi-keys such as the 1879-CC and 1893-CC follow with much greater difficulty. The final challenge, the 1889-CC, has prevented many a numismatist from completing the run of CC-mint Morgans. But here is such an opportunity, and not in the usual cleaned XF grade associated with the '89-CC. This is a brilliant semi-prooflike example that boasts a full strike and lacks consequential marks. The cornerstone of an advanced collection. (#7190)

- 926 1889-O MS64 Prooflike PCGS.** A hint of gold toning around the perimeter accents the highly reflective fields. There are no marks worthy of specific mention and the reverse is particularly well-preserved. Population: 26 in 64 Prooflike, 12 finer (6/09).
From The Bay State Collection, Part One. (#7193)

Exemplary MS66 1889-S Silver Dollar

- 927 1889-S MS66 PCGS.** Scintillating cartwheel luster is the hallmark of this fresh and pristine Morgan dollar. A light patina of rose and russet covers each side, but fails to diminish either the intense luster or the superlative eye appeal. Liberty's cheek is exceptionally clean, and the strike is generous save for a bit of flatness just above the ear. A beautiful coin. Population: 60 in 66, 1 finer (6/09). (#7194)
- 928 1890 MS65 PCGS.** Cobalt-blue, lavender, and golden-brown patination resides in the borders of this lovely Gem, ceding to light golden-gray in the centers. The few minor marks present on the lustrous surfaces do not detract from the overall appeal. Well struck except for the usual weakness in the central areas. (#7196)
- 929 1890 MS65 NGC.** The brilliant reverse cedes to deep blue and purple along the lower obverse border; light gold color fills out the remaining obverse. Lustrous surfaces are minimally abraded and exhibit sharply struck motifs. NGC has seen a mere four pieces finer, and PCGS a solitary example in higher grade. (#7196)
- 930 1890 MS65 PCGS.** This lustrous orange-red Gem is virtually bereft of contact. Only the hair above the ear and a few of the breast feathers lack a full strike. PCGS has certified just two examples in a higher grade (6/09). (#7196)
- 931 1890 MS65 Prooflike NGC.** Frosty devices offer modest contrast with reflective fields. Untoned and adequately struck. A few grade-consistent minute marks are visible. Census: 6 in 65 Prooflike, 0 finer (5/09). (#7197)
- 932 1890-CC MS64 PCGS.** The lustrous surfaces of this near-Gem exhibit sharply struck devices. A hint or two of gray-tan color is visible over each side. Light grazes preclude Gem status. (#7198)
- 933 1890-CC MS64 PCGS.** Warm gold-orange and pink patina graces most of the obverse and the reverse periphery. A well struck and strongly lustrous Choice example of this later Carson City Morgan dollar issue. (#7198)
- 934 1890-CC MS64 PCGS.** Lustrous and well impressed with just a whisper of golden toning. A better Carson City issue despite a relatively generous mintage. Most pieces presumably entered Western commerce. (#7198)

Appealing Near-Gem 1890-CC Dollar

- 935 1890-CC MS64 PCGS.** Ex: Carson City Collection. Light golden-brown toning graces this lustrous and crisply struck near-Gem. Only one mark warrants individual mention, a slanting abrasion on the cheek, and otherwise this coin is pleasingly preserved. Despite a mintage exceeding 2.3 million pieces, the 1890-CC dollar has survived in smaller quantities than several earlier CC-mint issues. (#7198)
- 936 1890-CC MS64 ANACS.** This boldly struck and highly lustrous Carson City near-Gem is generally brilliant but has an occasional hint of golden-brown toning, along with a subtle gray spot near the T in UNITED. (#7198)
- 937 1890-CC MS64 Prooflike PCGS.** Untoned surfaces yield modest field-motif variance. This is a well struck piece, including strong detail in the hair over Liberty's ear. Minor marks preclude Gem classification. Population: 84 in 64 Prooflike, 14 finer (5/09). (#7199)
- 938 1890-CC MS64 Prooflike NGC.** Prooflike fields yield mild variance with the lightly frosted, sharply struck devices, and whispers of barely discernible golden-tan color cling to the rim areas. Minute contacts and luster grazes deny Gem status. Light roller marks are visible in the centers of both sides. Census: 47 in 64 Prooflike, 6 finer (5/09). (#7199)
- 939 1890-CC MS63 Deep Mirror Prooflike NGC.** Light rose-pink coloration occupies the lower half of the reverse of this exquisitely struck Morgan. Minute obverse grazes limit the grade. (#7199)
- 940 1890-O MS65 PCGS.** VAM-7A, R.5. The "Spiked Eagle's Neck." Faint almond-gold toning precludes full brilliance, but the cartwheel luster is intense. The obverse is remarkably unabraded, and the reverse is also smooth despite faint field grazes near the eagle's head. The centers show the typical strike for a New Orleans issue of the era. (#7200)
- 941 1891 MS64 PCGS.** The silver-white surfaces of this near-Gem display pleasing luster and well struck design features. A few small marks preclude Gem status. (#7204)
- 942 1891-CC MS64 PCGS.** Rich silver-white luster is creamy with a hint of frost on the high points. An appealing near-Gem example of this popular Carson City issue, one that becomes elusive any finer. (#7206)
- 943 1891-CC MS64 NGC.** VAM-3. A Top 100 Variety. The Spitting Eagle variety with a die lump (as made) beneath the eagle's beak. Satinlike luster envelops both sides of this near-Gem, which shows just a touch of gold color at the lower obverse rim. Adequately struck, with just a few minor marks that deny Gem status. (#7206)

Charming Gem 1891-CC Dollar

- 944 1891-CC MS65 PCGS.** A shining Gem with delightful frosty whispers across the well-defined high points. Faint hints of milky toning in the fields do nothing to dampen the coin's silver-white essence. A few small reed marks isolated in the fields contribute to the grade. Rare any finer, with only 38 such pieces graded by PCGS (6/09). (#7206)

Elusive MS64 Deep Mirror Prooflike 1891-CC Morgan Dollar

- 945 1891-CC MS64 Deep Mirror Prooflike NGC.** Nearly untoned, except for whispers of light purple toning at the margins. The deep mirrored fields accentuate the devices, that exhibit relatively sharp definition, save for softness in the obverse center. Some minor luster grazes account for the grade. Census: 23 in 64 Deep Mirror Prooflike, 1 finer (6/09).
From The Bay State Collection, Part One. (#97207)
- 946 1891-O MS64 PCGS.** The untoned reverse of this near-Gem cedes to champagne-gold patination on the obverse, accented with lavender and electric-blue. Well struck for the issue. (#7208)
- 947 1892-CC MS61 ANACS.** Mottled reddish-brown, lavender, and cobalt-blue patina decorates satiny surfaces that have benefited from a well executed strike, including relatively sharp definition in the hair at Liberty's ear and on the eagle's breast feathers. Close inspection reveals fewer marks than typically seen on coins of this date. A pleasing piece for the grade. (#7214)
- 948 1892-CC MS63 PCGS.** The bright white surfaces of this Select CC-mint specimen offer pleasing luster and well struck design elements. Scattered marks, mostly on the obverse, limit the grade. (#7214)
- 949 1892-CC MS63 PCGS.** Bright untoned surfaces exhibit sharply struck motifs. Light grazes account for the designated grade. (#7214)
- 950 1892-CC MS63 PCGS.** Lustrous surfaces exhibit occasional traces of light gold-tan color and are fairly well impressed. A few minute marks limit the grade. (#7214)

- 951 **1892-CC MS63 NGC.** This Select offering displays nice luster and is well struck. A small purple-gold toning spot in the right center of each side is the only visible color. Minute marks define the grade. (#7214)
- 952 **1892-CC MS63 ANACS.** Delicate peripheral caramel-gold patina denies absolute brilliance, but this lustrous better date Carson City dollar has a good strike and conservatively assessed surfaces. (#7214)
- 953 **1892-CC MS64 PCGS.** VAM-8 with die chips within the 89 in the date. This lightly toned Carson City near-Gem has comprehensive luster and a virtually pristine reverse. The strike is full, and the eye appeal is excellent. (#7214)

Attractive 1892-CC Gem Dollar

- 954 **1892-CC MS65 PCGS.** Most Mint State 1892-CC dollars are heavily bagmarked and exist in lower grade levels from MS60 to MS62. This minimally marked Gem is thus a special offering. Its essentially untoned surfaces exhibit sharply struck design features that are highlighted somewhat by semiprooflike fields. PCGS has seen just 20 coins finer (5/09). (#7214)
- 955 **1892-O MS64 PCGS. CAC.** Aside from soft central detail, this subtly lustrous near-Gem New Orleans dollar is well-defined. Hints of rose and gold toning visit otherwise pale silver-gray surfaces. (#7216)
- 956 **1892-S AU50 PCGS.** Subtly lustrous silver-gray surfaces overall, though hints of orange are present at the margins and dots of claret are noted at the second U of UNUM and between the star and the O of ONE. Lightly worn across the high points with numerous wispy marks and abrasions that account for the grade. (#7218)
- 957 **1892-S AU50 PCGS.** A touch of rose and gold toning in the perimeter accents the delightfully lustrous fields. The high points show light wear, as typical for the grade, but there are no marks of any significance. The 1892-S is one of the scarcer dates in the series. (#7218)
- 958 **1892-S AU55 PCGS. CAC.** The second most important San Francisco Mint Morgan dollar, the 1892-S is a major condition rarity, elusive in AU grades and virtually impossible in Mint State. This Choice AU example has wisps of champagne toning over lustrous silver-gray surfaces. (#7218)
- 959 **1893 MS63 NGC.** Yellow-gold and purple toning clings to the obverse rims of this Select offering. Adequately struck with pleasing luster. Scattered grazes prevent a finer grade. (#7220)
- 960 **1893-CC XF45 NGC.** From a comparatively low mintage of 667,000 pieces, this Choice XF example displays traces of luster residing in the protected areas of its golden-gray surfaces. The devices retain nice detail, and a few minute marks are seen over each side. (#7222)

- 961 **1893-CC AU50 NGC.** The largely lustrous fields are minimally affected by minor abrasions scattered throughout. Peppered gold-orange toning in the periphery accents the mostly silver-gray surfaces. Struck during the final year of the Carson Mint, the 1893-CC is one of the more challenging issues. *From The Bay State Collection, Part One.* (#7222)

Bright 1893-CC Select Dollar

- 962 **1893-CC MS63 PCGS.** Somewhat prooflike fields establish modest variance with the devices of this Select CC-mint specimen. A decisive strike leaves sharp delineation on the design features. Untoned surfaces reveal a few light grazes that limit the grade. The last Carson City Mint silver dollar issue. (#7222)

Shining 1893-CC Dollar, MS63

- 963 **1893-CC MS63 PCGS.** A remarkably flashy example of this popular final-year Carson City Morgan dollar issue, virtually silver-white with a hint of golden-peach toning over parts of the centers. Light, scattered abrasions and a degree of striking softness at the centers contribute to the grade, though the eye appeal is strong. (#7222)

Scarce Prooflike 1893-CC Morgan MS63

- 964 **1893-CC MS63 Prooflike NGC.** A brilliant final-year Carson City Morgan dollar that has good reflectivity and the usual soft impression at the centers. Well preserved fields ensure the eye appeal. The 1893-CC failed to appear in the GSA auctions and is more elusive in Mint State than lower mintage dates such as the 1881-CC and 1885-CC. Census: 17 in 63 Prooflike, 1 finer (6/09). (#7223)

- 965** 1893-O—Improperly Cleaned—NCS. Unc. Details. Light caramel-gold toning visits this low mintage New Orleans Morgan dollar. Cartwheel luster sweeps both sides. The obverse has scattered minor marks, but hairlines are difficult to find. (#7224)

Low Mintage 1893-O Dollar, MS61

- 966** 1893-O MS61 NGC. Whispers of light golden-tan patina impart a touch of color to the margins of this O-mint representative. Some of the usual softness is apparent in the central areas, though a modicum of detail is visible in the hair over Liberty's ear. A few minute marks are scattered about, slightly more so on the obverse. The 1893-O is somewhat scarce in all grades (David Bowers, 2006). (#7224)

Appealing MS62 1893-O Dollar

- 967** 1893-O MS62 PCGS. Of four Morgan dollar issues in 1893, the 1893-O has the second-lowest mintage, its 300,000 pieces struck higher only than the famous 1893-S. This MS62 example offers strong luster with considerable reflectivity on the reverse. The obverse is slightly more subdued beneath a thin layer of silver-gray toning. Moderately abraded overall but pleasing. (#7224)

Striking Select 1893-O Dollar

- 968** 1893-O MS63 ICG. Well struck for this lower-mintage New Orleans issue, if a trifle softly detailed on the hair over Liberty's ear. Pale steel-white surfaces show considerable reflectivity, though not to the extent necessary for a Prooflike designation. Scattered marks and a set of light parallel scuffs in the right obverse field account for the grade. (#7224)

Pleasing 1893-O Dollar, MS64

- 969** 1893-O MS64 PCGS. This issue is the lowest-mintage New Orleans Morgan dollar (300,000 pieces). Ebullient luster endows both sides of this near-Gem, the obverse of which displays speckles of deep golden-brown. Lightly struck in the centers, a characteristic of the date, though some detail is visible on the eagle's breast feathers. A few grade-consistent marks are noted. Population: 92 in 64, 7 finer (5/09). (#7224)

- 970** 1893-S AG3 PCGS. CAC. Light gray patina shows on the original surfaces of this key-date representative that display just uniform wear. The design features exhibit a modicum of internal detail, including all of the letters in LIBERTY. Most of the rims are worn into the fields, as expected for the designated grade. A couple of minor rim marks on the lower left reverse do not unduly detract. This is a nice coin for having seen heavy circulation, and aptly recognized as such by CAC. (#7226)

Collectible 1893-S Dollar, VG Details

- 971** 1893-S—Improperly Cleaned—NCS. VG Details. Fine hairlines are visible on the obverse portrait. Medium to dark-gray patination in the fields and interstices of this VG Details key-date example accentuates the lighter silver-gray design elements. A few minute circulation marks are scattered over each side. More attractive than the technical description might imply. (#7226)

Key 1893-S Morgan Dollar, VG10 Details

- 972 **1893-S—Cleaned—ANACS. VG10 Details.** This piece shows variegated coral and dove-gray coloration across both sides. It is well worn, but the date and mintmark are still fully evident. It has been harshly cleaned, probably long ago, and wispy hairlines are noticeable in the fields. This is the premier key date in the Morgan dollar series, and genuine examples are always desired, including impaired specimens like this one. (#7226)

1893-S Morgan Dollar, Fine Details

- 973 **1893-S—Improperly Cleaned—NCS. Fine Details.** The 1893-S is the most difficult issue for the average Morgan dollar collector to acquire. This example has suffered from harsh cleaning at some point in its history, but it presents a reasonably well detailed appearance that includes charcoal to light-gray coloration. A couple of abrasions are individually noticeable on the reverse. An affordable example of this important key date. (#7226)

Desirable 1893-S Dollar, Fine 12

- 974 **1893-S Fine 12 PCGS.** Light gray toning is imbued with hints of tan, joined on the reverse by purple-blue whispers in the interstices. The design elements exhibit reasonable detail for a moderately worn coin. A few small circulation marks are noted on each side, but the surfaces are otherwise clean. This is a pleasing example for the designated grade. (#7226)

Fine 12 1893-S Morgan Dollar

- 975 **1893-S Fine 12 ANACS.** The Sherman Silver Purchase Act was repealed in the winter of 1893, and Morgan dollar mintages were immediately affected. The San Francisco Mint struck a mere 100,000 pieces bearing this date, the lowest business strike mintage (excluding the mythical 1895 issue) in the series' history. This is an attractive example that looks as though it might be the Fine 12 plate coin in a textbook on coin grading. Plenty of design details remain evident for the grade, and a shadowy grease stain (as made) on Liberty's forward hair detail beneath LIB, extending back to a point above the ear, seems relatively unimportant. A key date example that will not disappoint the winning bidder. (#7226)

Collectible VF Details 1893-S Dollar

- 976 **1893-S—Repaired, Cleaned—ANACS. VF20 Details.** A moderately worn example of this key-date San Francisco Morgan dollar, with all necessary diagnostics in place. The olive-toned surfaces are glossy and hairlined from a past cleaning, and each side shows extensive repair throughout the fields, as well as on Liberty's portrait. The rim bump at the lower right obverse appears to have been filed. (#7226)

Key-Date 1893-S Dollar, VF30 Details

- 977 **1893-S—Cleaned—ANACS. VF30 Details.** The bright surfaces of this key-date representative reveal light hairlines under magnification, and both sides are retoning shades of champagne-gold in the centers and slightly deeper reddish-gold at the peripheries. Nice remaining detail and minimally abraded. (#7226)

Borderline Uncirculated 1893-S Dollar

- 978 1893-S AU58 NGC.** The 1893-S is a prominent rarity among Morgan dollars, with an interesting twist: A plurality of known survivors are in Very Fine condition. Such a grade is indicative of a specific, moderate-to-light amount of wear that is inconsistent with the experiences of other issues. Many have concentrations at Fine or lower, while a handful of Treasury and GSA release issues have higher modes. What could have caused the distinctive wear pattern?

Q. David Bowers, in several of his written references, relates the anecdotal evidence supplied by E.S. Thresher, who wrote in the July 1925 *The Numismatist* that the 1893-S was one of only a handful of Morgan dollar issues he had not encountered in circulation. This led Bowers to speculate that perhaps the late 1920s saw the release of most of the 1893-S dollars to Rocky Mountain states, where coin collectors were scarce, and there they circulated until silver dollars fell out of fashion for general commerce.

The exact reason seems unknowable, yet the Bowers thought-experiment leads to some interesting possibilities. A hard fact, on the other hand, is that the 1893-S dollar is elusive in AU grades and a condition rarity in Mint State. This near-Mint survivor, impressively lustrous beneath layers of gold-orange and silver-gray patina, is well-defined with only a touch of friction across the high points. A few small abrasions on the cheek and wispy marks in the fields have little impact on the eye appeal. Census: 13 in 58, 25 finer (6/09). (#7226)

- 979 1894—Rim Damaged—ANACS. XF Details, Net VF30.** Whispers of orange and lavender concentrate at the margins of this key date Philadelphia representative. Three moderate reverse rim bruises account for the disclaimer.(#7228)
- 980 1894 AU50 PCGS.** Each side of this lightly circulated dollar has bright silver surfaces with considerable luster. The fields are slightly reflective with few blemishes. The 1894 is a scarce, low-mintage issue that is elusive in all grades.(#7228)

- 981 1894 AU53 PCGS.** Luster brightens the borders of this rare date silver dollar. Faint gold toning is here and there, and the wings and curls show only slight wear. Devoid of consequential marks. Among the lowest mintage issues, and widely pursued in all grades.(#7228)
- 982 1894—Cleaned—ANACS. AU53 Details.** This low mintage key date dollar has been dipped, but much luster is nonetheless present. The centers show only slight wear. A few wispy marks are noted between the US in PLURIBUS, and the chin has a small roundish strike-through, as made.(#7228)
- 983 1894 AU53 NGC.** The 1894 is a scarce issue with a relatively low mintage of 110,000 pieces. This mostly pale gray example has patches of lavender toning near the rims along with lots of luster in the fields.
From The Bay State Collection, Part One.(#7228)
- 984 1894 AU58 NGC.** A good amount of luster is still present on the essentially untuned surfaces of this near-Mint State specimen, as are well defined design elements. Light grease marks are visible on the upper reverse.(#7228)

Low-Mintage 1894 Dollar, MS61

- 985 1894 MS61 PCGS. CAC.** The 1894 has the lowest business strike mintage (110,000 pieces) of any Philadelphia issue except the phantom 1895. Medium intensity grayish-orange patina covers both sides of this specimen, each of which reveals a few light marks.(#7228)
- 986 1895-O AU53 PCGS.** Lightly worn overall, though this is most visible at the softly struck hair over Liberty's ear. Wispy abrasions cross radiant surfaces that are pale silver-gray with hints of tan.(#7236)
- 987 1895-O AU53 PCGS.** Wafts of yellow-gold toning grace the periphery of this scarcer issue. This lightly circulated representative has plenty of luster in the fields. The 1895-O dollar is seldom seen in Mint State grades.(#7236)
- 988 1895-O AU55 NGC.** Subtle luster remains at the margins of this O-mint Morgan, and whispers of yellow-orange patina grace the peripheries as well. Lightly abraded overall with a touch of wear on the high points.(#7236)
- 989 1896-O MS61 PCGS.** Light silver-gray luster overall, though dappled orange and blue elements appear at the obverse margins and a thin line of slate toning runs from the rim to Liberty's eye. Numerous wispy abrasions, as well as a more significant mark at Liberty's neck, contribute to the grade.(#7242)
- 990 1896-O MS61 PCGS.** Well struck overall with bright, lustrous silver-white surfaces accented with orange patina. Scattered abrasions are noted on each side, as are several scrapes on the cheek and above the portrait.(#7242)
- 991 1896-O MS62 PCGS.** Central weakness on both sides seems to prevent a higher numerical grade to this lustrous O-mint dollar. The obverse has light silver-gray surfaces while the reverse has splashes of vivid lemon-yellow toning.(#7242)

Challenging MS63 1896-O Morgan

- 992 **1896-O MS63 PCGS.** At the MS65 level, the 1896-O is among the rarest issues in the entire Morgan dollar series. MS63 examples are also scarce, since most pieces encountered are in XF or lower grades. Only a whisper of gold toning is present on this lustrous, nicely struck, and conditionally rare example. (#7242)

- 993 **1896-S MS62 NGC.** Glimpses of tan-gold toning become more prevalent near the rims. Lustrous and nicely struck with a clean reverse. A few ticks are clustered on Liberty's neck. Despite a mintage of 5 million pieces, the 1896-S is elusive in Mint State. (#7244)

Sharp Near-Gem 1896-S Silver Dollar

- 994 **1896-S MS64 PCGS. CAC.** A hint of gold toning denies full brilliance, but this sharply struck near-Gem has vibrant luster and impressively smooth surfaces. Scarcer in Mint State than its production of 5 million pieces suggests and nearly unobtainable above MS65, although a remarkable MS69 PCGS realized \$402,500 in our November 2005 Dallas Signature. (#7244)

Conditionally Rare MS64 1896-S Morgan

- 995 **1896-S MS64 PCGS. CAC.** Splashes of orange-red, apple-green, and slate-gray consume this nicely struck and lustrous Choice silver dollar. A few mint-made roller marks appear on the jaw, but post-strike imperfections are minimal. The three 1896 issues all have high mintages, but while the 1896 is common as a near-Gem, the 1896-O and 1896-S are surprisingly rare. (#7244)

- 996 **1897-O MS61 PCGS.** Well-defined overall with only trifling softness at the hair over Liberty's ear. Though wispy marks and a handful of abrasions cross Liberty's portrait, the overall eye appeal is strong. (#7248)

- 997 **1897-S MS65 Deep Mirror Prooflike ANACS.** Ex: Bill Lower. Lovely freckles of plum, sea-green, and gold toning grace the margins of this well struck and splendidly preserved Gem. The fields exhibit imposing reflectivity, and the devices have impressive frost. Ex: *Long Beach Signature* (Heritage, 9/2005), lot 6099. (#97251)

Stunning 1897-S Morgan Dollar MS66 Deep Mirror Prooflike

- 998 **1897-S MS66 Deep Mirror Prooflike NGC.** A stunning example with pristine silver surfaces. The fields are deeply mirrored and virtually mark-free, while the devices are highly frosted. Some hazy white patina is evident in the reverse and lower obverse fields. With the exception of a single PCGS coin, this is the finest certified specimen at either service (6/09). From *The Bay State Collection, Part One*. (#97251)

Wonderful Superb Gem 1898 Morgan

- 999 **1898 MS67 NGC.** A brilliant and beautiful Superb Gem that boasts unabraded fields and exceptional luster. Those who will be satisfied with any Mint State 1898 need not apply, but if an outstanding example is desired, here is an important opportunity. Census: 17 in 67, 0 finer (6/09). (#7252)

Fantastic Superb Gem 1898 Dollar

- 1000 **1898 MS67 PCGS.** The 1898 dollar is a rarity in MS67, with 42 pieces so graded in the combined certified population, and neither NGC nor PCGS has certified a finer example (5/09). This Superb Gem is impressively lustrous, with primarily silver-white surfaces that show infusions of pink-peach near the UR in PLURIBUS and scattered across the central reverse. (#7252)

1001 1898 MS65 Deep Mirror Prooflike NGC. An impressive Gem that boasts impressive field reflectivity and a precise strike. The central reverse has light sun-gold toning, but the coin is otherwise primarily brilliant. Census: 34 in 65 Deep Mirror Prooflike, 4 finer (6/09). (#97253)

1002 1898-S MS65 PCGS. Frosty surfaces show pale golden-tan patina over a portion of the obverse and reverse, intermingled with lighter silver luster. While the 1898-S dollar has a mintage of more than 4.1 million pieces, few bags were apparently stored in vaults, since the issue is scarce in Mint State. (#7256)

1003 1899-O MS67 NGC. The autumn-gold toning is generally light but deepens along the lower left obverse margin. Lustrous and well preserved with a good strike and a smooth cheek. Census: 88 in 67, 0 finer (6/09). (#7260)

Superb Gem 1900 Morgan

1004 1900 MS67 NGC. Delicate tan toning denies full brilliance but ensures the originality. Potent luster enlivens the nearly unabraded surfaces. Slight inexactness of strike appears at the centers, although most design details are crisp. The 1900 is plentiful in typical Uncirculated grades but emerges as an important conditional rarity at the MS67 level. Census: 34 in 67, 0 finer (5/09). (#7264)

Fantastic MS67 1900 Dollar

1005 1900 MS67 NGC. A great example of this turn-of-the-century issue, available in most lesser grades but a rarity this fine. The strike is above-average for the issue, though softly defined in the centers, and the generally silver-white luster is impressive. Hints of gold-orange grace the rims. Census: 34 in 67, 0 finer (6/09). (#7264)

Marvelous Superb Gem 1900-O Dollar

1006 1900-O MS67 NGC. Brightly lustrous and largely silver-white with glimpses of shell-pink seen in the fields close to the devices. Well struck overall, if a trifle softly defined on the hair over Liberty's ear, with exquisite preservation. This issue is scarce in MS67, and neither NGC nor PCGS has graded a finer example (6/09). (#7266)

1007 1900-O/CC MS64 PCGS. CAC. VAM-11. A Top 100 Variety. Faint golden accents join the pale silver-gray patina that has settled over each side. A delightful near-Gem with memorable eye appeal. (#7268)

1008 1900-O/CC MS65 PCGS. VAM-12. A Top 100 Variety. A lustrous Gem example of this popular overmintmark variant, primarily pale silver-gray with glimpses of gold that appear mostly at the margins. Well struck and pleasingly preserved. *From The Sonoma Collection.* (#7268)

1009 1900-O/CC MS65 PCGS. VAM-11. A Top 100 Variety. The honey-gold toning is slightly deeper on the reverse. Lustrous and meticulously struck with carefully preserved fields. (#7268)

1010 1900-S MS65 PCGS. CAC. Both sides show gold-orange and reddish-tan peripheral toning, though the patina on the reverse hews more closely to the rims. Immensely lustrous and attractive. (#7270)

Elusive Key 1901 Morgan Dollar, MS62

1011 1901 MS62 PCGS. Ex: Bermuda Collection. A solid Mint State example of this conditionally rare P-mint Morgan. This piece has fantastic, satiny luster that is a happy exception to the drab gray surfaces usually seen. There are a few small luster grazes on Liberty's cheek and the obverse field, but these grade-limiting blemishes do little to harm the substantial eye appeal. (#7272)

Important Select 1901 Dollar

- 1012 1901 MS63 NGC.** As Q. David Bowers wrote in his *Silver Dollars & Trade Dollars of the United States: A Complete Encyclopedia*: "Of all Philadelphia Mint business strike dollars, excepting the spectral 1895, the 1901 is the rarest in Mint State." Even Select examples such as the present piece are scarce, and finer representatives are rarities, with only 43 such coins in the combined certified population (6/09). This MS63 example offers soft luster and a pleasing strike beneath peach toning. Light abrasions contribute to the grade. (#7272)

Seldom-Seen MS63 1901 Morgan Dollar

- 1013 1901 MS63 NGC.** Bright luster exudes from both sides of this Select Morgan. The design elements are better struck than ordinarily seen, though the centers reveal some softness. Untoned surfaces show a few minor grazes and marks. Most of the nearly 7 million-piece mintage was apparently melted under the 1918 Pittman Act. (#7272)

Delightful 1901-O Morgan MS65 Deep Mirror Prooflike

- 1014 1901-O MS65 Deep Mirror Prooflike ANACS.** A captivating example, this piece exhibits satin silver surfaces on both sides with reflective fields and lustrous devices. Each side generates considerable mint brilliance from the centers. Both obverse and reverse sport a frame of gold, russet, and blue toning around the silver. (#97275)

Laudable Gem 1901-S Silver Dollar

- 1015 1901-S MS65 NGC.** The 1901-O is common, but it is a different story for the 1901-S. The issue is scarce in AU and finer grades, and decidedly rare as a Gem. This is a lustrous and faintly toned representative with smooth fields and only minor marks on the bust tip and above the eye. Census: 88 in 65, 7 finer (6/09). (#7276)

Elusive Gem 1901-S Morgan Dollar

- 1016 1901-S MS65 NGC.** A gorgeously original and satiny Gem with crisply struck design motifs and remarkably well preserved surfaces. The silver-gray centers yield to golden-brown, cobalt-blue, and violet-rose toning at the peripheries. A difficult S-mint issue in MS65 condition, and rare any finer. Census: 87 in 65, 7 finer (6/09). From *The Bay State Collection, Part One*. (#7276)

Rare Choice Deep Mirror Prooflike 1902 Morgan Dollar

- 1017 1902 MS64 Deep Mirror Prooflike NGC. CAC.** A virtually untoned near-Gem with flashy fields and impressively unabraded surfaces. 1902 Morgan dollars are extremely rare in Deep Mirror Prooflike format, and to find another that also has a CAC sticker will prove a Herculean task. Census: 2 in 64 Deep Mirror Prooflike, 1 finer (6/09). (#97279)

1018 1903-S AU50 NGC. Traces of luster reside in the recesses of this S-mint representative, and variegated soft violet and gold patina covers both obverse and reverse. A few minute marks are consistent with light circulation. (#7288)

1019 1903-S Small S XF40 PCGS. VAM-2. A Top 100 Variety. The "Small S" (sometimes called "Micro S") is nearly always encountered in circulated grades and is a popular variety among Morgan dollar collectors. The pleasing gunmetal-gray surfaces have no detracting marks. Population: 18 in 40, 38 finer (6/09). (#7306)

Important 1904-O VAM-28A Clashed G Morgan MS66 Deep Mirror Prooflike

1020 1904-O MS66 Deep Mirror Prooflike PCGS. VAM-28A, R.5. This brilliant Premium Gem has exceptional field reflectivity for a business strike silver dollar. In addition, the surfaces are gorgeously unabraded, and there are interesting clash marks, such as a partial G (from GOD, due to slight die rotation) along the left border of Liberty's neck. Per vamworld.com, "The strongest clashed 'G' that can be found in the Morgan Dollar series. ... While challenging to find, the DMPL examples of this VAM are visually stunning." Population: 19 in 66 Deep Mirror Prooflike, 1 finer (5/09). (#97293)

Tantalizing MS63 1904-S Dollar

1021 1904-S MS63 PCGS. A softly lustrous Select representative of this San Francisco issue, the last before the Morgan dollar's 17-year hiatus. Subtle olive, green-gold, and sage shadings drape surfaces that show no individually mentionable abrasions. Only minor striking softness and wispy marks preclude a finer designation. (#7294)

Challenging 1904-S Dollar MS63

1022 1904-S MS63 PCGS. Light chestnut-tan toning visits this lustrous and typically struck Select silver dollar. One curved vertical mark left of the ear, but generally pleasing for the MS63 level. Like other San Francisco issues from its decade, the '04-S is scarce in all grades and widely pursued in quality Mint State. (#7294)

1023 1921-D MS66 ★ NGC. CAC. Electric-blue and purple toning concentrates at the margins of this Premium Gem, joined by golden-orange on the reverse. Sharply struck and well cared for. The Star designation and CAC green label confirm the outstanding eye appeal. (#7298)

Exceptional 1921-D Morgan Dollar, MS67 ★

1024 1921-D MS67 ★ NGC. Dollars from 1921 were in circulation as late as the early 1960s. As a result, they acquired a reputation a common date and it has been difficult for collectors to view them as condition rarities. But they are just that, and the population figures underline their significance in high grade. NGC has only certified five other MS67 pieces of this issue, with one coin finer (6/09). Only one other MS67 ★ coin has been graded.

The added eye appeal that warrants the Star designation is immediately obvious when one views this piece. The surfaces are highly lustrous, an attribute that is strongly evident even through the toning. The obverse is deeply toned with emerald-green outlined with rose-golden at the margin; the reverse is light in color, with moderate rose and cobalt-blue around the periphery. The strike is strong, showing almost complete definition on the reverse wreath. (#7298)

PROOF MORGAN DOLLARS

Select Proof Eight Tailfeathers 1878 Morgan Dollar

- 1025 1878 8TF PR63 PCGS.** VAM-14.8. Just 500 proofs were struck of this single-year design subtype. Precisely struck and unabraded with deep apple-green, golden-brown, sky-blue, and rose-red patina. The reverse is well preserved, while the obverse has a few wispy hairlines. Population: 33 in 63, 44 finer (5/09). (#7311)

Gorgeous Cameo Proof Near-Gem 1878 Eight Tailfeathers Dollar

- 1026 1878 8TF PR64 Cameo NGC.** VAM-14.8. Writing of the 1878 8 Tailfeathers dollar, David Bowers (2007) notes that: "The demand for Proofs is especially strong, not as much from Proof specialists as from those who seek an example for a type set." While cameo contrast is usually minimal on examples of this issue, this particular near-Gem specimen displays a fair degree of variance, especially when the coin is tilted slightly under a light source. A veneer of golden-tan patina adorns both sides, each of which is devoid of significant abrasions, and an impressive strike sharpens the design elements, including the hair at Liberty's ear and the eagle's breast feathers. Only 500 8 Tailfeathers proofs were struck. (#87311)

Captivating PR67 Cameo 1880 Morgan

- 1027 1880 PR67 Cameo NGC.** In 1880 the Philadelphia Mint coined 1,355 proof Morgan dollars alongside 1,987 proof Trade dollars. There is little doubt that each of those coins fueled sales for the other. Dave Bowers writes: "Proof Mintage: 1,355, a figure caused by the carry-along factor from those who were speculating in proof Trade dollars this year." As with most other years, many proof 1880 dollars have been cleaned, though the present piece offers originality with only faint peripheral gold toning. A top-shelf Superb Gem. (#87315)

Attractive Near-Gem Proof 1881 Morgan

- 1028 1881 PR64 NGC.** Fully struck with lovely, smoky purple-violet toning on both sides and a mild degree of cameo contrast on the obverse, where Liberty's portrait is lightly frosted. One of only 975 pieces struck in the proof format this year. The 1881 Morgan dollar proofs are known to be well produced and attractive, and this near-Gem is no exception. (#7316)

Lightly Toned Cameo Superb Gem Proof 1881 Morgan Dollar

- 1029 1881 PR67 Cameo NGC.** Liberty's cheek and neck are as frosted as her hair, and the eagle and wreath also display prominent cameo contrast with the glassy field. A pinpoint-sharp specimen that has complete feather definition on the eagle's breast. The hair above the ear has virtually full detail. This beautiful Superb Gem appears brilliant upon cursory inspection, but faint gold toning adorns the immaculate fields. A minute planchet flake beneath the second S in STATES will identify this specimen. A scant 875 proofs were struck. Among the finest survivors of this scarce proof issue. Census: 8 in 67 Cameo, 2 finer (6/09). (#87319)

Colorful 1885 Dollar, PR64

- 1030 1885 PR64 NGC.** A total of 930 proof Morgan dollars were struck in 1885. Medium intensity multicolored toning bathes both sides of this near-Gem, and a well-executed strike emboldens the design features. A couple of unobtrusive marks deny Gem status. Census: 62 in 64, 58 finer (6/09). (#7320)

Flashy PR64 1887 Morgan

1031 1887 PR64 NGC. A flashy near-Gem with deep sea-green and rose-red toning. The strike is exacting, even on the hair above the ear and on the eagle's breast feathers. No hairlines are readily apparent when viewed beneath a loupe. Housed in a prior generation holder. Just 710 proofs were issued. (#7322)

1032 1887 PR63 Cameo PCGS. Well-defined for a proof Morgan dollar of the year with mild but distinct contrast that is stronger on the reverse. Faint champagne toning clings to the rims, and the fields are faintly hairlined beneath subtle silver-gray patina. (#87322)

1033 1888 PR62 PCGS. Faint tan-gold color visits the surfaces of this luminous proof. Well struck save for the usual softness in the obverse center. A few wispy hairlines show up under magnification. Still a nice piece for the numeric grade. Population: 42 in 62, 91 finer (6/09). (#7323)

Bold, Brilliant 1888 Dollar, PR66 Cameo

1034 1888 PR66 Cameo NGC. CAC. Fully struck, even on the occasionally weak hair over Liberty's ear, with noteworthy field-to-device contrast. The mirrors are deeply reflective, displaying sharply contrasting mint frost over the devices. A few light dabs of gray patina are seen in the reverse fields. Outstanding eye appeal. Census: 11 in 66 Cameo, 4 finer (5/09). (#87323)

Elusive Cameo PR63 1890 Morgan

1035 1890 PR63 Cameo NGC. This decisively struck and brilliant specimen exhibits obvious contrast between the iced devices and the flashy fields. The fields are clear and have only trivial hairlines. A slender curved line on the cheek is all that limits the grade. Only 590 proofs were struck. (#87325)

1036 1891 PR62 Cameo PCGS. Light champagne-gold patina covers each side and joins occasional splashes of russet and cobalt-blue on parts of the reverse. The design elements are well brought up. Wispy handling marks are noted on Liberty's cheek and in the fields. A fairly attractive coin for the grade.

Ex: Palm Beach Signature (Heritage, 3/2006), lot 1682, which realized \$2,070. (#87326)

Cameo PR67 1891 Morgan Dollar

1037 1891 PR67 Cameo NGC. The motifs display thick, even frost, and the contrast approaches an Ultra Cameo designation. However, NGC has only given a single proof 1891 dollar that appellation, and PCGS has certified just two examples as Deep Cameo. The present stone-white Superb Gem has unperturbed fields and equally undisturbed devices. The centers show slight incompleteness of strike. Only 650 proofs were coined. Census: 15 in 67 Cameo, 2 finer (6/09). (#87326)

Scarce 1893 Morgan Dollar, PR63 Cameo

1038 1893 PR63 Cameo ANACS. An attractive proof with deep mirror fields and lightly frosted devices hidden beneath golden-gray toning. Deeper gold-brown and cobalt-blue are apparent near the borders. Mild, pleasing cameo contrast is evident on each side. Generally well struck, save for a bit of softness on the hair directly above Liberty's ear, with a shallow pinscratch between stars 2 and 3 that extends up onto Liberty's jaw. There are a few stray field hairlines. (#87328)

Delightful PR66 Cameo 1893 Dollar

- 1039 1893 PR66 Cameo NGC.** A gleaming Premium Gem specimen of obvious and remarkable quality. Though the strike is soft at the hair over Liberty's ear, as often seen on the 1893 proof issue, the definition is solid elsewhere. Gleaming silver-white fields shine through occasional hints of toning, and no disturbances deserve individual mention. (#87328)

Desirable Select Proof 1894 Dollar

- 1040 1894 PR63 PCGS.** A strongly impressed Select proof example from this issue of 972 pieces, associated with a low-mintage business strike date and the predecessor of the famous proofs of 1895. This modestly hairlined example is deeply toned with electric blue peripheral shadings and more opaque green-gold and violet-rose at the centers. (#7329)

Exquisite 1896 Dollar, PR68 Ultra Cameo

- 1041 1896 PR68 Ultra Cameo NGC.** An exquisite Superb Gem with ice-white motifs and deeply mirrored fields. The pronounced contrast easily merits an Ultra Cameo designation. Although a powerful loupe locates a few hair-thin striations—relics of the die preparation—no abrasions are observed. The present piece can be identified by a trio of pinpoint flecks between the AR in DOLLAR.
- Only 762 proof Morgan dollars were struck in 1896. According to David Bowers in his *Silver Dollars & Trade Dollars of the United States*, two obverse dies were used to coin proof 1896 dollars, “both with date further left than usual, one with two small die file marks below ear, the other with heavy die polish in [the] ear and curls.” On the present piece, both the ear and the recesses of Liberty's hair exhibit a mirrored surface. Therefore, this is the second obverse die referred to in the Bowers reference. Census: 18 in 68 Ultra Cameo, 3 finer (5/09). (#97331)

Delightful PR66 1899 Morgan

- 1042 1899 PR66 NGC.** Peripheral pastel sun-gold, rose, and aqua shades invigorate the borders of this exquisite Premium Gem. The eagle and wreath are icy, as are Liberty's hair and cap. The eye appeal is exceptional. The centers display a few faint parallel roller marks, as made. A mere 846 proofs were issued, accompanying the low business strike mintage. Census: 25 in 66, 15 finer (6/09). (#7334)

Attractively Toned 1900 Dollar, PR64 Cameo

- 1043 1900 PR64 Cameo PCGS.** This is the last year proof Morgan dollars are reasonably obtainable with cameo contrast. Beginning in 1901 the Mint went to the all-brilliant method of proof production, and cameo coins are rarely encountered. This example has extraordinarily deep reflectivity in the fields and a significant amount of contrasting mint frost on the devices. Each side is light, almost brilliant in the center, with ever-deepening golden-brown patina toward the rims. Population: 12 in 64 Cameo, 10 finer (6/09). (#87335)
- 1044 1901 PR61 PCGS.** VAM-4. Moderate honey-gold toning envelops this sharply struck specimen. The left obverse field has faint hairlines. The reverse is die doubled, strongest on ONE DOLLAR, a diagnostic for the proof issue of this conditionally challenging Philadelphia date. (#7336)

Impressive PR63 1901 Morgan Dollar

- 1045 1901 PR63 NGC.** VAM-4. Both sides of this impressive proof dollar have brilliant surfaces. Fields and devices both are reflective, as usual for this issue; the Mint discouraged production of cameo proofs. Proofs of this date are in demand by type collectors, proof Morgan aficionados, and those who otherwise seek business strike coins, due to the rarity of pieces in the latter category. ONE DOLLAR is lightly die-doubled. (#7336)

- 1046 1902 PR61 ANACS.** A powerfully reflective example that upon tilting shows slight cameo contrast. As is to be expected, the surfaces display some light hairlines, but there are no individually offensive marks. Proof Morgan dollars such as the present example are exciting to look at, and this example is extremely flashy and untuned. Ex: *FUN Signature* (Heritage, 1/2007), lot 7498, which realized \$1,840. (#7337)

PEACE DOLLARS

- 1047 1921 Peace, High Relief MS65 PCGS.** Champagne-gold patination becomes slightly deeper at the peripheries, where it is joined by whispers of violet. The usual strike weakness is apparent in the centers. Some grade-consistent marks do not distract. (#7356)
- 1048 1921 MS65 NGC.** Silver-gray with hints of gold and scattered dots of milky toning, the most prominent at the left reverse. A lustrous Gem example of this first-year issue. From *The Sonoma Collection*. (#7356)
- 1049 1921 MS65 NGC.** Almond-gold and stone-gray drape this lustrous Gem. The centers show only moderate incompleteness, and marks are limited to a few faint grazes on Liberty's neck. Ex: *Long Beach* (Heritage, 2/2005), lot 2099, which realized \$1,399.55. (#7356)
- 1050 1921 MS65 PCGS.** CAC. Lightly gold-toned over parts of each side, though pale silver-gray color dominates. Softly struck as usual at the high points but pleasingly preserved. (#7356)
- 1051 1922 MS63 PCGS.** VAM-2E. A Top 50 Variety. The "Wing Break" VAM, given a four-star desirability rating by the authors of the Top 50 reference. The die break on the wing is more advanced than the die state photographed on page 11 of that book. Lustrous and lightly toned with a bold strike and wispy obverse field grazes. (#7357)

Stunning MS67 1922 Dollar

- 1052 1922 MS67 NGC.** Remarkably well-defined with potent and frosty luster. Light silver-gray tints drape much of each side, while the margins show dots of golden-tan and blue. A tiny mark on the chin is noted solely for accuracy. This Superb Gem is tied for numerically finest known to NGC or PCGS (6/09). (#7357)

Astounding Superb Gem 1922 Peace Dollar

1053 1922 MS67 NGC. Incredible quality and eye appeal for this second-year Peace dollar issue. The luster is intense and creamy, with hints of frostiness on the high points and a shining area around GOD on the obverse. The silver-gray surfaces show dappled gold and charcoal peripheral toning and a single abrasion above TRUST. Census: 12 in 67, 0 finer (6/09). (#7357)

1054 1922-D MS66 NGC. This satiny chestnut-gray Premium Gem has an unusually sharp strike, and abrasions are uncommonly absent. The 1922-D may be common in typical Mint State, but examples of the present quality are seldom encountered. (#7358)

1055 1922-D MS66 NGC. Freckles of cobalt-blue and russet-red enrich the peripheries of this lustrous, well preserved, and powerfully impressed Premium Gem. NGC has only graded 14 pieces finer (6/09). (#7358)

1056 1922-S MS64 PCGS. One lot of 20 pieces, each PCGS-certified MS64. All 20 pieces are brilliant and lustrous, many with light golden-brown toning. Several pieces are a trifle weak at the center, as usual for the issue. These 20 pieces have consecutive PCGS serial numbers. (Total: 20 coins)

1057 1922-S MS65 PCGS. Despite a prodigious mintage, the 1922-S is scarce at the MS65 level. This nearly untuned Gem has potent luster and refreshingly unabraded surfaces. The strike is good aside from the usual moderate blending at the centers. (#7359)

1058 1922-S MS65 PCGS. Golden peripheral toning yields to orange at parts of the rims. This beautifully lustrous Gem has faintly silver-gray centers and excellent visual appeal. (#7359)

1059 1922-S MS65 PCGS. A bright and essentially untuned S-mint Peace dollar Gem. Aside from a few shallow marks between the date and the bust, the preservation and eye appeal are high. PCGS has certified six finer pieces (5/09). (#7359)

1060 1922-S MS65 NGC. This is a fully lustrous and frosty Gem with excellent surfaces. A well executed strike leaves bold detail on the design features. NGC has only certified 12 finer examples (6/09). (#7359)

Charming Premium Gem 1923-D Dollar

1061 1923-D MS66 NGC. With its fantastic, faintly frosty luster and its stunning eye appeal, this Premium Gem is a winner in every respect. It is largely untuned save for hints of patina at the right margins, green-gold on the obverse with olive and orange shadings on the reverse. Neither NGC nor PCGS has graded a numerically finer example (6/09). (#7361)

Lustrous 1923-S Dollar, MS65

1062 1923-S MS65 NGC. Somewhat better struck than average, but the centers still lack completeness. Electric-blue, russet, and purple coloration is more extensive on the reverse, and lustrous surfaces reveal a scattering of grade-consistent marks. The 1923-S is readily available through near-Gem, but MS65 specimens are somewhat more challenging. Census: 74 in 65, 1 finer (5/09). (#7362)

Elegant Gem 1923-S Dollar

1063 1923-S MS65 PCGS. An attractive Gem example of this popular Peace dollar, a coin that is available for a price in MS65 but is extremely rare any finer. The obverse is frosty with faint gold-gray overtones, while the reverse has rich but subdued orange and gold patina prevailing. Minimally marked and pleasing. (#7362)

Exceptional MS65 1923-S Peace Dollar

1064 1923-S MS65 PCGS. Bright luster endows this Gem S-mint representative, and an above-average strike imparts much sharper design detail than ordinarily encountered on this usually poorly defined issue. Occasional hints of light gold show up under high magnification, and a few minuscule surface and rim marks likely prevent an even higher grade. This issue is common in the lower Mint State levels, but Gems are more difficult to locate; anything finer is extremely rare. PCGS has seen a mere three pieces in higher grade (5/09). (#7362)

1065 1924-S MS64 PCGS. CAC. Wisps of barely discernible golden-tan color make occasional visits to the radiantly lustrous surfaces of this near-Gem. This is a well struck coin with minor but grade-limiting marks. Housed in a green label holder. (#7364)

1066 1924-S MS64 PCGS. The minimally toned obverse contrasts with the gold-orange patina framed by electric-blue and purple on the reverse. Light marks deny Gem classification. Well-defined and elusive any finer. (#7364)

1067 1924-S MS64 PCGS. CAC. After big silver dollar mintages in 1921 through 1923, the San Francisco Mint settled for a much lower production in 1924: 1.728 million pieces. The present lovely near-Gem displays potent luster and suitably smooth surfaces. The tan-gold toning is slightly deeper on the reverse. (#7364)

1068 1924-S MS64 PCGS. Light gold toning confirms the originality of this lustrous and conditionally scarce silver dollar. The strike is pleasing, and no abrasions merit individual description. (#7364)

1069 1924-S MS64 NGC. An impressive strike imparts sharp definition to the design features of this near-Gem, and whispers of soft yellow-gold color visit various parts of the lustrous surfaces. A few minor marks preclude Gem status. The '24-S becomes more difficult in finer grades. (#7364)

1070 1926 MS66 NGC. Intense luster radiates from the silver-white surfaces of this sharply struck Premium Gem. A few minor grazes do not detract from the overall great eye appeal. Census: 43 in 66, 1 finer (5/09). (#7367)

1071 1926 MS66 NGC. Both sides are lightly toned near the centers, but the obverse border is rich golden-brown, and the reverse periphery is plum-red and ocean-blue. Well struck and gorgeously preserved. Census: 43 in 66, 1 finer (6/09). (#7367)

1072 1926 MS66 PCGS. Tan-gold toning has settled over much of the fields on this lustrous Premium Gem. Well struck and carefully preserved, a coin tied for finest certified by PCGS (5/09). (#7367)

1073 1926-D MS66 NGC. A beautiful and brightly lustrous Premium Gem, well-defined and silver-white with an arc of milky toning along the lower left obverse rim. On the reverse, a die crack passes through the eagle's head and the second half of E PLURIBUS UNUM. NGC has graded just seven numerically finer pieces (6/09). (#7368)

1074 1927 MS65 PCGS. Beautifully detailed and carefully preserved with gorgeous luster. Silver-gray centers yield to cream-gold at the margins. The obverse is remarkably clean for the grade, and only a small abrasion on the reverse precludes an even finer designation. PCGS has graded five finer examples (5/09). (#7370)

1075 1927 MS65 PCGS. Whispers of olive-green visit the lustrous surfaces of this Gem. A nicely struck piece with some minor grade-consistent marks. (#7370)

Handsome Gem 1927-D Dollar

1076 1927-D MS65 PCGS. The golden-russet toning is slight aside from deeper shadings across the lower obverse periphery. A satiny Gem that is well struck throughout the major devices. The cheek is particularly free from abrasions. PCGS has certified only nine pieces finer (6/09). (#7371)

1077 1927-S MS64 NGC. CAC. Frosty luster embraces both sides of this near-Gem, each displaying a hint or two of soft olive-green color. Well struck and moderately abraded. (#7372)

1078 1927-S MS64 NGC. Silver-white luster endows both sides of this near-Gem. Generally well struck and minimally abraded. (#7372)

1079 1927-S MS64 PCGS. Whispers of light gold visit the lustrous surfaces of this S-mint representative, and a well directed strike leaves relatively strong definition on the design elements. A few minute marks preclude Gem status. (#7372)

1080 1927-S MS64 PCGS. CAC. Strongly detailed and minimally toned overall. Each side is bright and radiant, though the left field shows extensive striations and a few post-striking disturbances. (#7372)

1081 1927-S MS64 PCGS. CAC. Whispers of light gold-tan color are slightly more extensive and deeper on the reverse of this S-mint near-Gem. This is a well struck piece, with just a few minuscule surface and rim marks. (#7372)

1082 1928 MS64 PCGS. Wisps of faint reddish-gold color occasionally visit the lustrous surfaces of this low-mintage Peace dollar, and a decisive strike imparts sharp definition to the design elements. A few unobtrusive marks preclude a finer grade. (#7373)

Elusive Gem 1928 Peace Dollar

1083 1928 MS65 NGC. The 1928 has long been recognized as a key for the Peace dollar series and is generally available for a price in grades through MS64, though Gems are elusive and anything finer is an extreme rarity. An attentive strike emboldens this Gem, and lustrous surfaces display just a hint or two of pale violet and gold-tan. Were it not for a few minor grazes, this piece would likely grade even finer. Census: 81 in 65, 2 finer (6/09). (#7373)

Lustrous 1928 Dollar, MS65

1084 1928 MS65 NGC. The 1928 has the lowest mintage (360,649 pieces) in the Peace dollar series, except for the 1922 High Relief. Beaming luster exudes from both sides of this Gem, each of which exhibits well struck design features and soft champagne color. A couple of unobtrusive marks do not detract from the pleasing eye appeal. (#7373)

1085 1928-S MS64 PCGS. Coruscating luster cascades over the untuned surfaces of this S-mint near-Gem, and a well directed strike delivers strong definition to the devices. Kept from a higher grade by a few small contacts. (#7374)

1086 1928-S MS64 PCGS. An appealing near-Gem example of this popular issue, one that proves highly elusive any finer. Dappled rose-gray and slate shadings drape softly frosted surfaces that show only minor, scattered abrasions. (#7374)

1087 1934 MS66 PCGS. A high grade example of this scarce, low mintage year. Booming luster and delicate golden toning combine with an exquisite strike to ensure the eye appeal. The obverse is close to pristine, and the reverse has only infrequent marks.
Ex: New York Signature (Heritage, 7/2004), lot 7429, which realized \$3,565. (#7375)

1088 1934-S MS61 NGC. The 1934-S is a series key in most Mint State grades, including MS61. This fully lustrous representative has light gold toning and good obverse eye appeal. The eagle's body reveals numerous tiny marks once viewed with a loupe. (#7377)

Lovely Gem 1934-S Peace Dollar

1089 1934-S MS65 NGC. Boldly struck and essentially untuned, with flashy white surfaces that reveal a pleasing satin sheen as the coin is rotated beneath a light. Just a trifle weak at the centers and on the eagle's leg feathers, as usual. Other than a few wispy chatter marks on each side, this Gem key date example is remarkably well preserved. Census: 71 in 65, 16 finer (6/09). (#7377)

1090 1935-S MS66 NGC. Three rays below ONE. Splashes of medium intensity apple-green, tan, and ruby-red toning visit the upper right obverse border of this sharply struck and exceptionally preserved Premium Gem. Vibrant luster sweeps both sides. Census: 48 in 66, 3 finer (6/09). (#7379)

Splendid 1935-S Dollar MS66

1091 1935-S MS66 PCGS. Three rays below ONE. This attentively struck Premium Gem has vibrant luster and only a whisper of golden toning. Virtually pristine aside from a concealed small mark within the upper hair. The final San Francisco issue. Just two pieces have been graded higher by PCGS (6/09). (#7379)

PROOF EISENHOWER DOLLAR

1977-S Eisenhower Dollar PR70 Deep Cameo

1092 1977-S PR70 Deep Cameo PCGS. A fully struck and essentially flawless specimen that exhibits delicate gold toning. The icy devices contrast immensely with the glassy, inky-black fields. 1977 marked the return of the reverse design shelved in 1975 for the Bicentennial. Population: 13 in 70 Deep Cameo (6/09).
From The Bay State Collection, Part One. (#97437)

PROOF SUSAN B. ANTHONY DOLLAR

PR70 Deep Cameo Type Two 1981-S Anthony Dollar

1093 1981-S Type Two PR70 Deep Cameo PCGS. The thorough hobby promotion of the Type Two '79-S proof varieties was duplicated two years later when the mintmark style again changed. The Type Two mintmark has large, bulbous serifs and is less symmetrical than its Type One counterpart. An outstanding white-on-black specimen. The final S-mint proof issue, since the belated 1999 proofs were coined at Philadelphia. Population: 46 in 70 Deep Cameo (6/09). (#99595)

SACAGAWEA DOLLAR

Rare MS67 2000-P 'Cheerios' Dollar

- 1094 2000-P Cheerios MS67 PCGS.** FS-901. Incorrectly listed as FS-401 on the PCGS holder, which is the *Cherry-pickers'* designation for the "Wounded Eagle" damaged die variety. This is the "Cheerios" variety, given that name by the hobby since examples came from boxes of Cheerios cereal. The Sacagawea dollar was introduced in 2000, and U.S. Mint marketing included a Cheerios promotion. While every box contained a 2000 cent, only occasional boxes had both the cent and a 2000-P dollar. It turned out that those dollars were from a different reverse hub than the regular dollars. The differences are found on the tail feathers, which show greater detail on the "Cheerios" dollars. This is a lustrous and flawless sun-gold Premium Gem. An MS66 Red "Cheerios" 2000 cent accompanies the lot, as does the cut laminated holder that once held both coins within a Cheerios cereal box. Population: 13 in 67, 16 finer (5/09). (Total: 2 coins) (#147231)

COMMEMORATIVE SILVER

Patinated MS66 1893 Isabella Quarter

- 1095 1893 Isabella Quarter MS66 PCGS.** Rich emerald-green and maroon toning graces this satiny and exactly struck Premium Gem. Beautifully void of abrasions, and a desirable type in such high grade. Often at the Columbian Exposition along with the 1892 and 1893 Columbian halves, which sold in much greater number due to a more favorable price. Commemorative issuers apparently took notice, since no additional commemorative quarters were issued prior to 1975. *From The Sonoma Collection.* (#9220)

- 1096 1900 Lafayette Dollar MS63 NGC.** DuVall 2-C. The second S in STATES is repunched, with the original cutting to the east. Satinlike luster invigorates the untuned surfaces of this commemorative dollar, and a well directed strike sharpens the design features. Minute handling marks preclude a higher grade. (#9222)

- 1097 1900 Lafayette Dollar MS63 PCGS.** DuVall 2-C. The repunched second S in STATES is diagnostic. Lustrous surfaces display dapples of orange-gold on the obverse portraits, along with well struck design elements. Light marks limit the grade. (#9222)
- 1098 1900 Lafayette Dollar MS64 PCGS.** DuVall 1-B. Light almond-gold toning enriches this lustrous Choice silver dollar. Marks are refreshingly few, even on Washington's cheek, which on many other examples draws abrasions like a magnet. Superior for the issue, and worthy of evaluation by the specialist. (#9222)

Popular 1900 Lafayette Dollar, MS65

- 1099 1900 Lafayette Dollar MS65 PCGS.** DuVall 1-B. This deeply toned Gem is housed in a green-label PCGS holder. It has frosty luster that shines through the blue-gray, gold, and russet toning on each side. While the profiles of Washington and Lafayette have a few grade-limiting abrasions, the remaining areas are clean and virtually mark-free. *From The Sonoma Collection.* (#9222)

- 1100 1935-D Arkansas MS67 PCGS.** An outstanding example of this conditionally rare commemorative. Even, light argent-gray patina drapes both sides, with a smidgen of brick-red color at the top of the reverse. Strong eye appeal, even by Superb Gem standards. Population: 36 in 67, 0 finer (5/09). *From The Sonoma Collection.* (#9234)

Superb Gem 1937-S Arkansas Half

- 1101 1937-S Arkansas MS67 PCGS.** Ex: JFS Collection. Golden-brown and baby-blue hues enrich the peripheries, while the remainder of the obverse is essentially untuned and the central reverse features faint lilac color. A suitably struck and shimmering Superb Gem with pleasing preservation and outstanding eye appeal. Originally issued only as part of a PDS set, just 5,506 1937-S Arkansas halves were produced. High grade survivors are very rare, much of which has to do with the design. Liberty's cheek is especially prone to distracting marks, although the present piece is exemplary in this regard. *From The Sonoma Collection.* (#9243)

- 1102 1938-S Arkansas MS66 PCGS.** Light gray-gold toning on both sides cedes to deeper gold, crimson, and green in the lower area of the reverse border. Well struck with just a couple of light, barely noticeable abrasions on Liberty's neck. *From The Sonoma Collection.* (#9247)

- 1103 1938-S Arkansas MS66 PCGS.** Dappled autumn-gold and dove-gray endow this satiny and fully struck Premium Gem. Refreshingly devoid of abrasions, and housed in a green label holder. Population: 58 in 66, 0 finer (6/09). (#9247)

1104 1939-D Arkansas MS66 PCGS. Pale silver-gray centers yield to dots of golden-brown close to the rims. Strong eye appeal for this final-year Arkansas issue, one of the lowest-mintage classic silver commemoratives. PCGS has graded six finer pieces (5/09).
From The Sonoma Collection.(#9250)

1105 1939-D Arkansas MS66 PCGS. Pastel ice-blue and straw-gold occupy most of this satiny Premium Gem. The margins, however, offer deep shades of cherry-red. The strike is close to full, and both sides are smooth save for faint other grazes near 4 o'clock. Only 2,104 pieces were issued. Population: 63 in 66, 6 finer (6/09). (#9250)

1106 1938-S Boone MS67 NGC. Lime and straw-gold accents grace this satiny and fully struck Superb Gem. Virtually immaculate, and essentially unimprovable. A mere 2,100 pieces were struck. Census: 23 in 67, 1 finer (6/09). (#9276)

1107 1936 Cincinnati PDS Set MS64 to MS65 PCGS. The set includes: **1936 MS64**, lustrous, lightly toned, well-preserved, a reasonable strike; **1936-D MS65**, sharply struck, nearly brilliant, potent luster; and a **1936-S MS64**, light tan and sky-blue on the reverse, a couple of unimportant ticks. A scarce single-year PDS type.
From The Sonoma Collection.(Total: 3 coins)

1108 1936 Columbia PDS Set MS66 PCGS. The set includes: **1936**, brilliant, a well preserved obverse; **1936-D**, a few mint-made obverse lintmarks, a hint of tan toning; and **1936-S**, lustrous, boldly struck, an undisturbed obverse.
From The Sonoma Collection.(Total: 3 coins)

1109 1936 Gettysburg MS66 PCGS. Medium golden-gray toning confirms the originality of this lustrous and splendidly preserved Premium Gem. Boldly impressed, and encapsulated in a prior generation holder.
From The Sonoma Collection.(#9305)

1110 1922 Grant With Star MS64 PCGS. Variegated reddish-gold, orange, and violet patina runs over both sides of this near-Gem, and a solid strike delivers strong definition to the design features. The luster is partially subdued by the depth of the toning. Minimally abraded. (#9307)

Dappled Select 1928 Hawaiian Half

1111 1928 Hawaiian MS63 NGC. A lustrous Hawaiian half, modestly abraded for the grade, that has intriguing eye appeal thanks to its distinctive patina. Blue, rose, and golden-tan peripheral bands blend into one another, while silver-gray and khaki-rose elements are dappled across the center. A readily collectible example of this popular one-off classic silver commemorative. (#9309)

Coveted MS64 1928 Hawaii Half Dollar

1112 1928 Hawaiian MS64 PCGS. Steel-gray and caramel-gold intermingle across this shimmering and delicately toned near-Gem. Boldly struck and minimally abraded. The Hawaiian type is the most elusive within the classic silver commemorative series. It is scarcer than the similar-mintage Hudson and Spanish Trail, partly due to its earlier date, but mostly because half of the production was reserved for the territory of Hawaii. (#9309)

Dazzling 1928 Hawaiian Half, MS65

1113 1928 Hawaiian MS65 PCGS. This Gem specimen has been carefully preserved, unlike many survivors of this key silver commemorative type. The only marks of note are a couple of minute abrasions below Captain Cook's mouth, a milling mark on the warrior's left breast, and a minuscule contact on the upper left leg. The design elements are sharply impressed, including nice definition on the natural and cultural landscape features fronting the beach on the reverse. Fully lustrous surfaces display a thin veneer of light champagne and olive color. Certified in an old green label holder.
Ex: Long Beach Signature (Heritage, 6/2005), lot 7113, which realized \$6,325.
From The Sonoma Collection. (#9309)

Vibrant 1928 Hawaiian Half, MS66

1114 1928 Hawaiian MS66 PCGS. A gorgeous Premium Gem with pale gold in addition to vibrant iridescent toning on each side. The underlying surfaces are satiny, fully lustrous, and void of all but the smallest abrasions that are hidden within the intricate design details. Population: 63 in 66, 1 finer (5/09).
From The Sonoma Collection. (#9309)

- 1115 1935 Hudson MS64 PCGS.** Light apricot patina enriches this minimally toned and lustrous low mintage near-Gem. Nicely struck and well preserved. Encased in a green label holder. (#9312)
- 1116 1935 Hudson MS66 PCGS.** Yellow-gold peripheral toning imbued with traces of mint-green frames grayish-gold centers. Lustrous surfaces exhibit well struck devices and reveal just a few minor reverse marks. (#9312)
- 1117 1924 Huguenot MS67 NGC.** A hint of golden toning has settled over the otherwise silver-white surfaces of this Superb Gem Huguenot half. The strike is crisp, and the preservation is impeccable. Neither NGC nor PCGS has certified a numerically finer representative (5/09).
From The Sonoma Collection. (#9314)
- 1118 1925 Lexington MS66 PCGS.** A pleasing luster flow shows on this sharply struck Premium Gem, as do dapples of soft violet and golden-tan color. The few minute marks present are in line with the designated grade. PCGS has graded only nine examples higher (6/09). (#9318)
- 1119 1925 Lexington MS66 NGC.** Potent luster invigorates this sharply struck commemorative half. A veneer of soft champagne-gold color resides on both sides, each of which is devoid of significant marks. (#9318)
- 1120 1925 Lexington MS66 PCGS.** Impressively lustrous and distinctively toned. This Premium Gem has rich orange, green-gold, burgundy, and silver-blue toning across the obverse. The reverse shows a subtler mix of similar colors prevailing, with deeper shadings at the right rim. (#9318)
- 1121 1921 Missouri 2x4 MS64 NGC.** The lustrous surfaces of this near-Gem display reddish-brown toning on the lower obverse margin. A well struck piece with some minor grade-limiting obverse marks. (#9331)
- 1122 1923-S Monroe MS65 PCGS.** Minimally marked with high eye appeal for this famous conditionally elusive classic commemorative. The surfaces show light golden toning on each side and strong luster.
From The Sonoma Collection. (#9333)
- 1123 1926-S Oregon MS67 PCGS.** One of the most attractive examples of this popular commemorative issue that we have ever examined, this impressive piece displays a complete layer of deep, variegated toning over both sides. The centers are mostly golden-brown, except for purple-rose accents on the Indian, while vibrant electric-blue and rose iridescence decorates the peripheries. Well struck, impeccably preserved, and lustrous, simply a great Superb Gem example. Population: 90 in 67, 4 finer (5/09). (#9341)
- 1124 1926-S Oregon MS67 NGC.** Vibrant luster and amazingly spectacular toning endows this Superb Gem commemorative. Soft cobalt-blue, purple, and gold coloration resides on impeccably preserved surfaces that exhibit sharply struck devices. (#9341)
- 1125 1937-D Oregon MS68 NGC.** The superbly struck motifs display every nuance of Laura Gardin Fraser's magnificent design. Satiny and virtually pristine, this marvelously preserved example has a light silver-green cast, with scattered russet-orange patina evident near the obverse and reverse peripheries. Census: 60 in 68, 1 finer (6/09). (#9347)
- 1126 1915-S Panama-Pacific MS65 NGC.** Soft russet patination clings to the lustrous surfaces of this well struck commemorative half dollar. A couple of minute marks are noted in the upper obverse field. (#9357)

Exquisite 1915-S Panama-Pacific Half MS66

- 1127 1915-S Panama-Pacific MS66 PCGS.** This stone-white and lustrous Premium Gem has an impeccable strike, and the reverse appears pristine. The obverse is also devoid of abrasions save for a thin mark beneath the lower hand. The mintmark is lightly repunched north.
Ex: Long Beach Signature (Heritage, 6/2005), lot 7161, which realized \$4,025.
From The Sonoma Collection. (#9357)
- 1128 1921 Pilgrim MS65 PCGS.** The obverse has a mix of gold-gray, charcoal, and silver shadings, while the reverse has silver dominant. A lustrous Gem example of this second-year Pilgrim half.
From The Sonoma Collection. (#9360)
- 1129 1921 Pilgrim MS66 PCGS.** Lustrous surfaces display golden-gray patina, with faint hints of magenta and ice-blue, and are virtually devoid of mentionable contact marks. A small toning streak is noted in the upper right (facing) obverse field. The design elements are well impressed. PCGS has graded 19 finer examples (5/09).
From The Sonoma Collection. (#9360)
- 1130 1936-D Rhode Island MS67 NGC.** The highly lustrous surfaces of this Superb Gem yield a grayish-gold cast with subtle lilac undertones. Well cared for surfaces exhibit pleasing luster and sharply struck design elements. Census: 31 in 67, 3 finer (6/09). (#9364)
- 1131 1936-D Rhode Island MS67 PCGS.** Glimpses of gold and crimson peripheral toning yield to light silver-white color at the centers. A lustrous Superb Gem with great eye appeal. Tied for the finest example certified by PCGS (5/09).
From The Sonoma Collection. (#9364)
- 1132 1936 Rhode Island PDS Set MS64 PCGS.** A largely brilliant, well-matched set housed in green label holders. Each coin appears to be minimally marked for the grade.
From The Sonoma Collection. (Total: 3 coins)
- 1133 1926 Sesquicentennial MS65 NGC.** Coruscating luster and splashes of light golden-brown toning ensure the eye appeal of this carefully preserved Gem. The strike is good for the type, although Washington's cheek retains faint planchet chatter. The Sesquicentennial is elusive at the MS65 level and a rarity any finer, with just 16 such pieces known to NGC (6/09). (#9374)

1134 1926 Sesquicentennial MS65 PCGS. Deeply variegated golden-brown, apple-green, and ruby-red patina encompasses this shimmering and minimally abraded Gem. The only commemorative type (so far) featuring Calvin Coolidge. Certified in a green label holder. PCGS has graded only eight pieces finer (6/09). (#9374)

1135 1935 Spanish Trail MS66 PCGS. Powder-blue and walnut-tan tints adorn this satiny and exactly struck Premium Gem. The reverse is essentially pristine, and the obverse has only infrequent minor imperfections. A pleasing example of this popular one-off classic silver commemorative.

From The Sonoma Collection. (#9376)

1136 1934 Texas MS66 PCGS. Light silver-gray color with glimpses of cream settling over parts of the margins. Strong "halo" luster and careful preservation. PCGS has graded 38 finer examples (5/09).

From The Sonoma Collection. (#9381)

1137 1935 Texas MS66 PCGS. Apricot and aqua-blue hues endow this exquisitely struck and highly lustrous Premium Gem. A coin of immense quality, encapsulated in a small-format PCGS holder.

From The Sonoma Collection. (#9382)

1138 1946-S Booker T. Washington MS67 PCGS. CAC. Medium intensity multicolored toning bathes the lustrous surfaces of this highly attractive Superb Gem. Both sides are sharply struck and impeccably preserved. Population: 48 in 67, 0 finer (5/09). (#9406)

1139 1947-S Booker T. Washington MS67 NGC. This silver commemorative issue is available through the Gem level of preservation, and can even be located in Premium Gem with some searching. Superb Gems such as the present example are elusive, however, and represent the finest certified pieces. Soft golden-silver patina covers highly lustrous surfaces. Sharply struck and nicely preserved. Census: 16 in 67, 0 finer (6/09). (#9410)

1140 1951 Washington-Carver MS66 PCGS. Tan-gold and silver-blue shadings encompass this lustrous and nicely struck Premium Gem. Virtually bereft of post-strike contact, although the cheek of George Washington Carver retains faint planchet marks. Population: 30 in 66, 0 finer (6/09). (#9430)

1141 1951 Washington-Carver MS66 PCGS. Dramatic fire-red frames the green-gray centers. Sharply impressed and shimmering with a slender struck-in thread through ALL. The final classic commemorative type. Population: 30 in 66, 0 finer (6/09). (#9430)

Fully Toned 1952-S Washington-Carver Half MS67

1142 1952-S Washington-Carver MS67 NGC. Dapples of olive-brown and russet dot each side, joined by splashes of reddish-brown on the reverse. An attentive strike leaves strong definition on the design elements. Devoid of mentionable marks and highly appealing for this lower-mintage Washington-Carver issue. Census: 4 in 67, 0 finer (6/09). (#9436)

1143 1952 Washington-Carver PDS Set MS65 PCGS. These three Gems have silver-gray and gold-gray color dominant with varying degrees of crimson and plum tab toning also visible. This is most prominent on the 1952 and least prominent on the 1952-D.

From The Sonoma Collection. (Total: 3 coins)

1144 1953-D Washington-Carver MS66 PCGS. Delicate tan-gold toning visits the rims, while the fields and devices are olive-gray. Well struck for the type, with minor incompleteness on Washington Carver's cheek. A mere 8,003 pieces were struck. Population: 29 in 66, 0 finer (6/09). (#9439)

1936 Wisconsin Half, MS68

Extraordinarily Clean

1145 1936 Wisconsin MS68 NGC. U.S. coinage has innumerable peculiarities of striking irregularities and areas where abrasions tend to concentrate. The Wisconsin commemorative is known to specialists as a coin that is especially difficult to locate with minimal abrasions on the miner's arm on the obverse. This is one of the cleanest examples we have seen. The overall surfaces are just as impressively clean and show soft mint frost with a slight overlay of rose-lilac toning. Census: 17 in 68, 0 finer (6/09). (#9447)

COMMEMORATIVE GOLD

1146 1903 Louisiana Purchase/Jefferson MS65 PCGS. Deep honey-gold toning graces this thoroughly lustrous and needle-sharp Gem. Devoid of marks, although each side has a small russet alloy spot, as made. Encased in a green label holder. (#7443)

1147 1903 Louisiana Purchase/Jefferson MS66 PCGS. The first of the commemorative gold dollars, issued for the centennial Louisiana Purchase Exposition in 1903. The present Premium Gem offers orange and aqua shades on both sides, along with the infrequent accent of deeper reddish-brown. (#7443)

1148 1904 Lewis and Clark MS63 PCGS. Bright yellow-gold surfaces exhibit sharply struck design features. A few handling marks on each side limit the grade. (#7447)

Appealing MS66 Lewis and Clark Dollar

- 1149 1904 Lewis and Clark MS66 PCGS.** A small affair by the standards of the World's Columbian Exposition and the Louisiana Purchase Exposition, the Lewis and Clark Centennial Exposition, which was held in Portland, Oregon, would be little-remembered today if not for the two commemorative issues struck to celebrate it. The first is represented here by a shining yellow-gold Premium Gem, crisply struck and carefully preserved. PCGS has graded a mere 15 finer examples (6/09). (#7447)

Lustrous 1904 Lewis and Clark Commemorative Gold Dollar MS66

- 1150 1904 Lewis and Clark MS66 NGC.** A blazingly lustrous and scintillating peach-gold representative of this popular issue. NGC has certified a scant 24 pieces at a higher numerical grade (6/09). These Charles Barber-designed commemoratives are the only two-headed coins officially struck by a U.S. mint. Money generated from the sale of 1904 and 1905 Lewis and Clark gold dollars—together with donations for national women's organizations—financed the creation of a large bronze statue of the Native American guide Sacagawea for the Lewis and Clark Centennial Exposition in 1905. The statue proudly stands today in Portland, Oregon's Washington Park. (#7447)
- 1151 1905 Lewis and Clark MS62 NGC.** This Uncirculated example displays lovely olive-green and red-gold coloration. The design elements are sharply struck, and there are only a few stray lines in the fields that limit the grade. The 1905 Lewis and Clark dollar is the most difficult of the small gold commemoratives. (#7448)
- 1152 1905 Lewis and Clark MS63 PCGS.** Variegated peach and mint-green patina bathes both sides of this Select commemorative. The design elements are well impressed, and a few minor marks limit the grade. (#7448)

Sharp Gem 1905 Lewis and Clark Gold Dollar

- 1153 1905 Lewis and Clark MS65 NGC.** Pale yellow-gold surfaces are flashy, as is often the case for this low-mintage issue. Crisply detailed portraits are carefully preserved. A great Gem example of this ill-fated commemorative issue, which sold even more poorly than its 1904 counterpart. NGC has graded 50 numerically finer examples (6/09). (#7448)

Pleasing Gem 1905 Lewis and Clark Dollar

- 1154 1905 Lewis and Clark MS65 PCGS.** A medley of yellow-gold, apricot, and mint-green patination adorns the lustrous surfaces of this Gem commemorative gold dollar. The design elements are nicely struck. A couple of light grade-consistent handling marks do not detract from the overall pleasing eye appeal. (#7448)

Outstanding 1905 Lewis and Clark
Commemorative Gold Dollar, MS66

- 1155 1905 Lewis and Clark MS66 PCGS.** The official mintages of the 1904 and 1905 Lewis and Clark commemorative gold dollars are similar, at 10,025 and 10,041 pieces, respectively. These numbers actually represent net distributions, however, as both issues were produced in significantly higher quantities: 25,028 coins for the 1904, and 35,041 examples of the 1905. About 15,003 of the 1904s were melted as unsold, and roughly 25,000 of the 1905s suffered the same fate (Bowers, 2008).

This Premium Gem is sharply struck, and the unmarked surfaces display dazzling mint luster. It is a great example of this popular, early gold commemorative type. Population: 69 in 66, 2 finer (6/09). (#7448)

1905 Lewis and Clark Gold Dollar MS66
Single Finest Certified as Prooflike

- 1156 1905 Lewis & Clark MS66 Prooflike NGC.** This intricately struck Premium Gem has flashy fields and light honey toning. Patient evaluation beneath a strong lens fails to locate any visible detractors. Of the four gold commemorative dollar issues of 1903 to 1905, the 1905 Lewis and Clark is the scarcest; collector interest dwindled after type demand was sated by its 1904 predecessor. NGC has certified nine examples as Prooflike, but among those, the present piece is the single finest certified, two grades higher than a trio listed in the Census as MS64 Prooflike (6/09). (#77448)
-
- 1157 1915-S Panama-Pacific Gold Dollar MS65 PCGS. CAC.** An apricot and yellow-gold Gem with satin sheen and a mark-free appearance. The mintmark is repunched southeast. A small cigar-shaped strike-through (as made) on the AN in FRANCISCO provides an identifier. (#7449)
- 1158 1915-S Panama-Pacific Gold Dollar MS65 PCGS. CAC.** As the smallest of three gold denominations issued for the Panama-Pacific International Exposition, the gold dollar is popular with collectors who desire a single souvenir of that San Francisco event. A lovely, highly lustrous yellow-gold example, this Gem retains excellent eye appeal. (#7449)
- 1159 1915-S Panama-Pacific Quarter Eagle AU55 NGC.** The honey-gold surfaces of this Choice AU commemorative quarter eagle exhibit well defined devices. A scattering of minute marks does not detract. (#7450)

Attractive 1915-S Panama-Pacific Two and a Half MS66

- 1160** 1915-S Panama-Pacific Quarter Eagle MS66 PCGS. Coruscating luster rolls across this khaki-gold Premium Gem. The strike is sharp, and post-strike abrasions are virtually absent. The only commemorative type to feature a hippocampus or a caduceus. PCGS has certified only 19 pieces in higher grades (5/09). (#7450)

Elegant 1915-S Panama-Pacific Quarter Eagle, MS66

- 1161** 1915-S Panama-Pacific Quarter Eagle MS66 NGC. Soft luster resides on both sides of this Premium Gem, each of which displays a mix of greenish-gray and yellow patina. A well executed strike imparts uniformly strong definition to the design elements. Generally well preserved, although some hair-thin marks are visible on the upper portion of the obverse motif. (#7450)

Lovely 1915-S Panama-Pacific Quarter Eagle, MS66

- 1162** 1915-S Panama-Pacific Quarter Eagle MS66 NGC. In 1915 Farran Zerbe was the driving force behind a set of commemorative coins for the Panama-Pacific International Exposition, including a half dollar, gold dollar, quarter eagle, and not one, but two fifty dollar gold coins, one round and the other octagonal. This Premium Gem quarter eagle has frosty lustrous and brilliant yellow-gold surfaces with a single small mark on the obverse rim at 11 o'clock. (#7450)

Premium Gem Panama-Pacific
1915-S Two and a Half

- 1163** 1915-S Panama-Pacific Quarter Eagle MS66 PCGS. This powerfully struck and satiny Premium Gem is essentially immaculate and features rich khaki-gold toning. The eagle on the reverse is familiar to pattern collectors, as Assistant Engraver George T. Morgan used it earlier (with slight differences) on the reverse of his 1879 Schoolgirl silver dollar (Judd-1608). PCGS has certified only 19 pieces finer (6/09). (#7450)

Impressive MS62 1915-S Panama-Pacific Fifty Dollar Octagonal

1164 1915-S Panama-Pacific 50 Dollar Octagonal MS62 PCGS.

Although their round counterparts are slightly rarer, the fifty dollar octagonal Panama-Pacific commemoratives are more prominent to nonspecialists. There is no other issue like it in the American commemorative series, classic or modern; only the fifty dollar round pieces match the octagonal coins' sheer size, and there is no substitute for their singular eight-sided shape.

It is unsurprising that the fifty dollar octagonal coins should be sought-after today, just as they were almost a century ago, despite a selling price that was double an already considerable face value. The fifty dollar octagonal coins had their share of popularity, but the number of individuals who could afford them was small. As Q. David Bowers noted in *Commemorative Coins of the United States: A Complete Encyclopedia*: "Sales were not up to expectations, and after November 1916 a quantity amounting to 855 octagonal pieces went to the melting pot, leaving a net issuance of 645 pieces."

This MS62 representative has warm butter-yellow luster with occasional green-gold accents. The strike is pleasing, if a trifle soft on Minerva's helmet, and there are no singularly mentionable abrasions; rather, a number of wispy marks, some in the fields and others on the central devices, combine to preclude Select status. Still, this coin's considerable eye appeal is not to be denied. A readily collectible example of an important and memorable classic gold commemorative. (#7452)

1165 1915 Panama-Pacific International Exposition Box. An original black leather and purple velvet box for a five-piece Panama-Pacific coin set. Overall Fine to Very Fine. Dimensions are 4.5 inches by 5 inches. Included is the original information card that accompanied the set. No coins are included in this lot.

1166 1916 McKinley MS65 PCGS. This green label-holdered Gem exhibits reflective, satiny surfaces with a remarkable display of honey-gold, rose, pale blue, and light green toning on both sides. For the toned gold enthusiast, this is a must-see example. (#7454)

Gorgeous MS67 1916 McKinley Gold Dollar

1167 1916 McKinley MS67 NGC. The Act of Congress of February 23, 1916, authorized the construction of the McKinley Birthplace Memorial, and specified that up to 100,000 gold dollars be struck at the Philadelphia Mint to help defray its cost. Twenty thousand pieces were produced during August and October 1916 (with 26 reserved for assay). Of those 10,023 were eventually melted, leaving a net mintage of 9,977 1916 dollars.

This surviving Superb Gem displays gorgeous luster radiating from beautifully colored yellow and peach-gold, mint-green, and apricot surfaces. A powerful strike that brings out sharp definition on the design elements. Both sides are immaculately preserved. Census: 66 in 67, 0 finer (6/09). (#7454)

1168 1926 Sesquicentennial MS64 PCGS. A blend of yellows enlivens each side of this Sesquicentennial near-Gem. It is well struck overall with few marks, though a handful of tiny abrasions near the base of the torch combine to preclude Gem status. A small patch of green-gold is noted at the lower left reverse. (#7466)

1169 1926 Sesquicentennial MS64 PCGS. Vibrant lemon-gold and sun-yellow shadings blend on this attractive near-Gem. The obverse is well preserved, and the reverse has only a few inconspicuous thin marks. (#7466)

1170 1926 Sesquicentennial MS64 PCGS. Greenish-gold patina adheres to the lustrous surfaces of this near-Gem commemorative quarter eagle. Well struck and minimally abraded. (#7466)

1171 1926 Sesquicentennial MS65 PCGS. A shining Gem Sesquicentennial quarter eagle with fantastic eye appeal. The bright sun-gold obverse gives way to the deeper orange shadings of the reverse. (#7466)

1926 Sesquicentennial Quarter Eagle Smooth, Lustrous Premium Gem

1172 1926 Sesquicentennial MS66 NGC. Attractive luster envelopes both sides of this Premium Gem commemorative gold dollar, and a decisive strike imparts sharp definition to the design elements. Brass-gold surfaces are laced with hints of mint-green and reveal just a few unobtrusive grade-consistent marks. Census: 85 in 66, 4 finer (6/09). (#7466)

PROOF COMMEMORATIVE GOLD

Choice, Rare Proof Louisiana Purchase 1903 McKinley Gold Dollar

1173 1903 Louisiana Purchase/McKinley PR64 PCGS. Per Breen (1988), the first 100 pieces were proofs, for both the McKinley and Jefferson designs. The present example has pleasing lemon-gold and lilac toning. The fields are impressively mirrored, the strike is razor-sharp, and there is no indication of cartwheel luster. An important opportunity to acquire a rare proof finish on a classic gold commemorative. Population: 9 in 64, 19 finer (5/09). (#7483)

MODERN ISSUES

1174 1991-D Mount Rushmore Half Dollar MS70 PCGS. Light golden toning enriches this satiny, pristine, and fully struck representative. The first commemorative type to feature a bison or Theodore Roosevelt. Population: 13 in 70 (6/09). (#9642)

1175 1993-S Jefferson Silver Dollar PR70 Deep Cameo PCGS. A pristine representative whose frosted motifs and darkly mirrored fields provide unimprovable deep cameo contrast. Although issued in 1994, this commemorative type was backdated 1993 to coincide with the 250th anniversary of Jefferson's birth. Population: 8 in 70 Deep Cameo (6/09). (#9689)

1176 1995-W Civil War Gold Five Dollar MS70 NGC. An unimpeachable representative of the Civil War Battlefield Preservation five dollar in circulation finish. Light yellow-gold surfaces have impressive, satiny luster.
From The Sonoma Collection. (#9702)

1177 1995-W Olympic/Stadium Gold Five Dollar MS70 NGC. One of just 10,579 circulation-finish pieces in the net mintage, this Stadium five dollar coin is technically flawless. Exquisitely struck with top-flight eye appeal.
From The Sonoma Collection. (#9734)

- 1178 1997-W Jackie Robinson Gold Five Dollar MS68 ANACS.** One of the most challenging modern commemoratives, the Uncirculated-finish Jackie Robinson half eagle has a net mintage of only 5,174 pieces. This example has smooth and strong luster with crisp detail. (#9759)

**Key MS69 Jackie Robinson
1997-W Gold Five**

- 1179 1997-W Jackie Robinson Gold Five Dollar MS69 PCGS.** A plethora of contemporaneous commemorative issues, including many for the 1996 Atlanta Olympic games, apparently exhausted collectors. Most overlooked the 1997-W Uncirculated Jackie Robinson five dollar, which had a distribution of only 5,174 pieces. The tiny emission makes it the key to the modern commemorative series. This beautifully preserved honey-gold example has pristine mattelike surfaces and a full strike. *From The Sonoma Collection.* (#9759)

- 1180 1997-W Jackie Robinson Gold Five Dollar PR70 Deep Cameo PCGS.** Lemon-gold toning endows this immaculate specimen. The obverse depicts a three-quarters facing bust of a middle-aged Jackie Robinson. Population: 81 in 70 Deep Cameo (6/09). (#9760)

- 1181 2000-W Library of Congress Bimetallic Ten Dollars MS69 PCGS.** The mattelike surfaces reveal flawless striking details and appear utterly pristine. A beautiful example of this increasingly popular bimetallic issue. *From The Sonoma Collection.* (#9784)

- 1182 2000-W Library of Congress Bimetallic Ten Dollars MS70 NGC.** Even close inspection reveals no blemishes on the satiny surfaces. An exquisite example of this bimetallic commemorative, one of just 7,261 circulation-strike pieces in the net mintage. *From The Sonoma Collection.* (#9784)

**2000-W Library of Congress
Bimetallic Ten Dollars MS70**

- 1183 2000-W Library of Congress Bimetallic Ten Dollars MS70 PCGS.** The eagle's shield is square and the wings are free of feathers, both departures from traditional American heraldic coinage design that give the piece a distinctly modernist appearance. The sole bimetallic commemorative issue, and the first commemorative issue to include platinum as part of its composition. A sharply struck, pristine, and seemingly flawless example. (#9784)

- 1184 2000-W Library of Congress PR69 Deep Cameo PCGS.** Profoundly contrasted and virtually perfect. A gleaming specimen of this famous modern bimetallic commemorative issue, one of 27,445 proofs released. *From The Sonoma Collection.* (#99784)

- 1185 2000-W Library of Congress PR70 Ultra Cameo NGC.** Perfect in every respect. The only bimetallic issue within the modern commemorative series, the Library of Congress ten dollar is similarly distinctive for its singular use of platinum in a commemorative coin. *From The Sonoma Collection.* (#99784)

- 1186 2003-W First Flight Gold Eagle PR70 Ultra Cameo NGC.** A technically perfect specimen of this modern ten dollar commemorative proof. The strike and contrast are equally bold, and the mirrors are absolute. *From The Sonoma Collection.* (#921003)

- 1187 2003-W First Flight Gold Eagle PR70 Deep Cameo PCGS.** A flawless example whose butter-gold fields turn dark once rotated away from the light. The only ten dollar gold commemorative type issued after the 1984 Los Angeles Olympics. Population: 53 in 70 Deep Cameo (6/09). (#921003)

MODERN BULLION COINS

- 1188 1988-S Silver Eagle PR70 Deep Cameo PCGS.** Ice-white devices exhibit unlimited contrast with the mirrored fields. An exquisite and pristine specimen. Population: 52 in 70 Deep Cameo (6/09). (#9817)

- 1189 1993-P Quarter-Ounce Gold Eagle PR70 Deep Cameo PCGS.** A pristine representative with glassy fields and luminous yellow-gold devices. Razor-sharp, and exactly as made. PCGS has been stingy awarding the PR70 grade for this issue, although the firm has certified 1,645 pieces at the PR69 level. Population: 46 in 70 Deep Cameo (6/09). (#9871)

- 1190 1995-W Silver Eagle PR66 Deep Cameo PCGS.** Crisply detailed with immense reflectivity and outstanding contrast. Though this coin is "merely" a Premium Gem, it offers a more affordable opportunity to own this key silver American Eagle issue. (#9887)

- 1191 1995-W Tenth Anniversary American Eagle Proof Set PR69 Deep Cameo PCGS.** This five-piece set contains the rare 1995-W silver eagle, along with the tenth-ounce, quarter-ounce, half-ounce, and one-ounce proof gold eagles of the same issue, each certified PR69 Deep Cameo by PCGS. The mint-issue maroon box and presentation case accompany, although without the certificate of authenticity. (Total: 5 coins)

- 1192 2006 One-Ounce Gold Eagle MS70 NGC.** The popular design gold American Eagle is offered here in perfect MS70 grade, considered perfect quality, and indeed it is. *From The Bay State Collection, Part One.* (#89984)

- 1193 2007-W One-Ounce Platinum Eagle PR70 Deep Cameo PCGS.** An utterly flawless represented of this largest denomination coin struck by the United States. The contrast between the mirrors and the frosted devices is absolute. PCGS has assigned the ultimate grade to just 90 pieces (5/09). (#149579)

- 1194 2007-W One-Ounce Platinum Eagle PR70 Deep Cameo PCGS.** The one-year Executive Branch reverse, with a close-up of an eagle behind a shield, wings spread. This gleaming proof has utterly unimpeachable surfaces with eye appeal to match. (#149579)

COINS OF HAWAII

Patinated 1883 Hawaii Half MS63

- 1195 1883 Hawaii Half Dollar MS63 PCGS.** A sizeable hoard of Hawaii quarters has made that denomination fairly plentiful, but the hapalua or half dollar is elusive, as are the umi keneta (dime) and dala (silver dollar). Original blended golden-brown and cream-gray toning adorns satiny and sharply impressed surfaces. Population: 58 in 63, 64 finer (6/09). (#10991)

Important 1883 Hawaii Half, MS64

- 1196 1883 Hawaii Half Dollar MS64 PCGS.** A deeply toned hapalua with bold design elements and excellent luster, all combining to create incredible aesthetic appeal. This desirable piece, like all 1883 Hawaiian silver coins, was struck at the San Francisco Mint, using planchets of U.S. coinage standards. Population: 53 in 64, 11 finer (6/09). (#10991)

ERRORS

Select (1943) Steel Cent With Obverse Struck Through Capped Die

- 1197 (1943) Steel Cent—Obverse Struck Through Capped Die—MS63 NGC.** A dramatic steel cent error. The reverse is normal, with peach and steel-blue surfaces that show a small spot below the right wheat stem, but the obverse is distorted, with only the ghost of Lincoln's portrait visible. Superimposed on the faint design are enlarged, inverted echoes of ONE CENT and much of UNITED STATES OF AMERICA, the result of this piece being struck through an obverse die cap. A fascinating piece that would make an excellent "companion coin" to a die cap error.

1960 Large Date Lincoln Cent With Mirror Brockage Reverse, MS62 Brown

- 1198 1960 Large Date Lincoln Cent MS62 Brown—Mirror Brockage on Reverse—NGC.** The obverse has the appearance of an ordinary 1960 cent, but the reverse shows an incused and reversed image of the obverse. The reverse is a 100%, early strike brockage. It was struck between the obverse die and the obverse of a previously struck cent (not included) that clung to the reverse die. The brockage is somewhat softly impressed, but several letters and digits in LIBERTY and the date are bold. Toned chocolate-brown with glimpses of orange-gold.

1998 Lincoln Cent With Obverse Die Cap, MS65 Red

- 1199 1998 Lincoln Cent—Die Cap—MS65 Red ANACS.** This cent stuck to the reverse die after the initial strike. It remained in the coinage chamber for additional strikes, struck against a series of planchets fed between it and the obverse die. The obverse shows a flattened, distorted, and low relief image of Old Abe.

Obverse Die-Capped 1998 Lincoln, MS66 Red

- 1200 1998 Lincoln Cent—Obverse Die Cap—MS66 Red NGC.** This hapless cent clung to the obverse die upon its first impression from the dies. Subsequent strikes (against newly fed planchets, none of which are included) created a thimble shape, with metal forced around the lip of the obverse die. The reverse is featureless, except for IN GOD from the first strike visible on the reverse edge.

MS66 Red 1998 Cent, Obverse Die Cap

- 1201 1998 Lincoln Cent—Obverse Die Cap—MS66 Red NGC.** This impressive die cap cent stuck to the obverse die following the initial strike. Additional strikes, against newly fed planchets, created a cup shape as metal wrapped around the lip of the obverse die. The reverse Lincoln Memorial image is flattened and distorted by the series of strikes against blank flans.

1999 Lincoln Cent With Cupped Obverse Die Cap, MS66 Red

- 1202 1999 Lincoln Cent—Obverse Die Cap—MS66 Red NGC.** This cent was first struck between the obverse die and the obverse of a previously struck cent (not included). This cent then adhered to the obverse die and was struck additional times, wrapping partly around the obverse die. The reverse shows a reversed, incused, and spread image of the obverse, the design from the first impression flattened by subsequent strikes against a series of freshly fed flans. The die cap, with its thick, cupped rim, barely fits within the NGC holder, and the sealing process has caused a trace of the holder plastic to melt around small portions of the coin.

MS67 Red Obverse Die-Capped 2000 Cent

- 1203 2000 Lincoln Cent—Obverse Die Cap—MS67 Red NGC.** This cent had a normal first strike but clung to the obverse die, and was then struck against a series of newly fed planchets. Those strikes flattened the present piece, and created a cup-shaped edge as metal was forced about the lip of the obverse die. The Memorial reverse is still evident, although distorted and in low relief from additional strikes against blanks.

2001 Lincoln Cent Struck on a 2001-P Roosevelt Dime, MS64

- 1204 2001 Lincoln Cent—Double Denomination on 2001-P Dime—MS64 PCGS.** An unabraded and lustrous chestnut-gray example of this popular and elusive error type. Roosevelt gazes southeast and is nearly face-down relative to the portrait of Lincoln. The flame of the torch flickers beneath the right center of the memorial. The mintmark is bold, and both dates have three clear (and one faint) digit.

Struck and Bifurcated 1883 No Cents Liberty Nickel, AU50

- 1205 1883 No Cents Liberty Nickel—Split After Striking—AU50 NGC.** Both halves of an 1883 No Cents nickel that split cleanly through the middle of the edge after striking. Each half appears normal on one side, but the other side reveals the internal textures of the copper-nickel coin. (Total: 2 coins)

**1979 Nickel on a Struck Lincoln Cent
Double Denomination, MS64 Red**

- 1206 1979 Jefferson Nickel—Double Denomination on Struck Cent—MS64 Red PCGS.** The panes of the Lincoln Memorial appear like train tracks aligned vertically with the portrait of Jefferson. Lincoln is seated within the Memorial near where Jefferson's ear should be. Lincoln's beard overlaps the steps of Monticello. The date of the nickel is clear; the cent date is mostly effaced, although the 79 is faintly present.

**Impressive 1918 Dime Error, MS62
Mirror Brockage on Reverse**

- 1207 1918 Dime—Mirror Brockage on Reverse—MS62 NGC.** A remarkably clear and dramatic brockage that shows an incused, mirrored image of the obverse in place of the reverse. The date appears twice but the reverse design is absent, so the mint where this error was struck is unknown. The true obverse shows peripheral weakness, and several light but distinct abrasions on the brockage side account for the grade.

**1998-P Roosevelt Dimes
Mated Pair Error, MS65**

- 1208 (2) 1998-P Roosevelt Dimes—Mated Pair—MS65 NGC.** Coin #1 had a normal first strike but failed to completely eject from the dies. It was struck a second time, about 95% off-center toward 8 o'clock. The second strike is at 7 o'clock relative to the first strike. The second strike was between the obverse die and a newly fed planchet that covered the reverse die. The latter piece became coin #2, which has a 5% obverse indent from coin #1 at 8 o'clock. (Total: 2 coins)

Dramatic Obverse Die Cap 1998-P Dime, MS66

- 1209 1998-P Roosevelt Dime—Obverse Die Cap—MS66 NGC.** Housed in an extra-thickness NGC holder, the better to accommodate the dramatic flange centered at 11 o'clock on the obverse. By contrast, the lower right edge of the obverse shows little raised metal. As with most advanced die caps, the obverse has a prooflike level of detail, while the reverse design is utterly obliterated.

**1954 Franklin Half Struck on
Silver Quarter Planchet, MS63**

- 1210 1954 Franklin Half Dollar—Struck on Silver Quarter Planchet—MS63 PCGS.** Well-centered overall with a full date and nearly all of Franklin's profile and the Liberty Bell visible. Wrong planchet errors are always popular, and this is an opportunity to acquire an obsolete silver type. Light golden toning is seen over each side, with good underlying mint luster.

**Choice Full Bell Lines 1959 Franklin Half
Struck on a Quarter Flan**

- 1211 1959 Franklin Half—Struck on a Type One Quarter Planchet—MS64 Full Bell Lines NGC.** 6.2 gm. Type One planchet without raised rims. Type One Reverse with low-relief wing feathers. The date and mintmark area are fully present. Lustrous and lightly toned with beautiful preservation. The portrait, Liberty Bell, and eagle are intact but peripheral legends are 50% to 100% absent.

**1979 Kennedy Half, AU58, Struck on a
Susan B. Anthony Dollar Planchet**

- 1212** 1979 Kennedy Half—Struck on an Anthony Dollar Planchet—AU58 PCGS. Slightly uncentered, with the obverse rim present between 3 and 6 o'clock but most of LIBER off the flan. On the reverse, portions of UNITED and much of HALF DOLLAR are also absent. Satiny and unabraded with medium chestnut toning.

**(1968-70) S-Mint 40% Silver Kennedy Half
Die Adjustment Strike, PR63**

- 1213** Undated 40% Silver 19??-S Kennedy Half—Die Adjustment Strike—PR63 ANACS. From dies between 1968 and 1970, the only years that proofs of this type were struck from this alloy at San Francisco. Light to medium gold toning. A truly mushy strike with only central detail well brought up. The mintmark is legible, but the area of the date just shows the granular surface of the planchet.

WASHINGTONIA

**Original "1797" Sansom Medal in Bronze
MS63 Brown, Baker-71A**

- 1214** 1797 Sansom Medal, Original Dies MS63 Brown NGC. Baker-71A, R.6. Julian-PR-1. Bronze. Plain Edge. 40.7 mm. Designed by John Reich and issued in 1807 in Philadelphia in very limited quantities. The original advertisement for this medal states it was only issued in silver, but that is clearly not the case as original pieces are also known in bronze and white metal. Originals are distinguished by recutting on the 9 in the date and also from the closeness of RELINQ. to the pedestal. The Rulau-Fuld revision of Baker (second edition) estimates 12-15 pieces are known of the Baker-71A. This is an attractive example with slight variation in the overall mahogany-brown color, and there are just a few tiny contact marks in the fields that account for the grade.

SO-CALLED DOLLAR

- 1215** 1826 Erie Canal Completion Medal AU55 NGC. HK-1. White metal. Listed as "extremely rare" in the 1963 Hibler-Kappen reference. This evenly struck example has lustrous borders, and the devices are also outlined with luster. The fields and highpoints have toned dove-gray. A strong loupe reveals a few minor field marks.
- 1216** No Lot.

MINT SETS

- 1217** Three Early Mint Sets. One each of 1947, 1954, and 1957, in cardboard holders and envelopes. Toning is variable, while the coins range from MS60 to Gem and up. Interesting eye appeal. *From The Sonoma Collection.* (Total: 3 sets)
- 1218** Four 1940s and 1950s Mint Sets. One each of 1948, 1953, 1955, and 1959. All show a degree of cardboard-holder toning and come with envelopes. Condition range MS60 to MS66. *From The Sonoma Collection.* (Total: 4 sets)
- 1219** Four Early Mint Sets. One each of 1949, 1953, 1956, and 1958. All in green cardboard holders and envelopes, the first mailed to an R.O. Gruber. Color variable, as is condition (MS60 to MS66). *From The Sonoma Collection.* (Total: 4 sets)
- 1220** Four 1950s Mint Sets. Four mint sets, one 1951, one 1952, and two 1958, all in green cardboard holders and housed in manila envelopes. Toning light to heavy, grades ranging from MS60 to MS65+. *From The Sonoma Collection.* (Total: 4 sets)

GSA DOLLARS

- 1221 1881-CC MS66 NGC.** VAM-2 with prominent repunching inside the upper loops of the 8s. This Carson City dollar is boldly struck and lustrous with merely a trace of tan toning. The fields are beautifully smooth, and the face has only unimportant grazes. (#7126)
- 1222 1882-CC MS66 NGC.** This lustrous high grade Carson City type coin has booming luster and a crisp strike. The margins offer hints of sun-gold toning, and the fields are beautifully preserved. Minor grazes on the face are barely worthy of mention. (#7134)
- 1223 1890-CC MS61 NGC.** VAM-9A, R.6. The "Break Left Star" variety, and per vamworld.com, "the key variety of the 1890-CC date, far rarer than the Top 100 popular VAM-4 Tail Bar." Lustrous and lightly toned with relatively smooth surfaces and a typical central strike. The box and certificate of issue are included. (#7198)
- 1224 1891-CC MS62 NGC.** VAM-3. A Top 100 Variety. This nearly brilliant "Spitting Eagle" Carson City dollar has booming luster and an attentive strike. Moderate obverse grazes correspond to the grade. Accompanied by the box and certificate of government issue. (#7206)

ADDITIONAL CERTIFIED COINS

- 1225 1891-CC Morgan Dollar MS65 Paramount (MS62).** Ex: Redfield. VAM-3. A Top 100 Variety. Parenthetical grade ours. Bright silver-white centers with varying levels of gold-green, violet, and brown peripheral toning. Scattered abrasions overall, but pleasing in total.
From The Sonoma Collection. (#7206)

Distinctive Redfield 1893-CC Dollar, MS61

- 1226 1893-CC Morgan Dollar MS65 Paramount (MS61).** An unusual Redfield dollar in that it belongs to the highly elusive 1893-CC issue. The centers are bright silver-white, while the margins vary from gold-orange to peach and powder-blue. Numerous small marks on the portrait contribute to the technical grade, but the eye appeal is high for the MS61 level.
From The Sonoma Collection. (#7222)

End of Session Two

Each issue of *Heritage Magazine* offers collectors, investors, and dealers an insider's view of the world's most valuable collectibles. With colorful features, thought-provoking departments, insightful columns and eye-popping photos, *Heritage Magazine* reflects the interests of the world's most passionate collectors.

PATTERNS

Gem Proof 1852 Annular Gold Dollar Judd-140, Struck in Copper-Nickel

- 1227** 1852 Gold Dollar, Judd-140, Pollock-167, Low R.7, PR65 PCGS. CAC. One of the proposed solutions to the problem of the undersized and easily lost gold dollar was an annular pattern. The large center perforation (as struck) forces a simple design. The obverse has only USA above the hole with 1852 below, while the reverse has a series of laurel sprigs amidst heavy concentric die lines. Curiously, no denomination is stated. Struck in copper-nickel with a plain edge. Light golden-brown toning enriches unperturbed, well struck surfaces. (#11589)

- 1228** 1855 Flying Eagle Cent, Judd-168 Original, Pollock-193, R.4—Improperly Cleaned—NCS. Proof. The obverse shows a hook-neck eagle surrounded by thirteen stars with the date below. The reverse is similar in design to the large cent, but the wreath is smaller. The diameter is intermediate between the large and small cents. Struck from prominently clashed dies, in bronze with a plain edge. Recolored tan-brown and slightly glossy, perhaps to conceal a few faded obverse field pin scratches. (#11720)

Scarce 1855 Judd-171 Flying Eagle Cent, XF45

- 1229** 1855 Flying Eagle Cent, Judd-171, Pollock-196, Low R.7, XF45 NGC. An eagle flying left dominates the obverse, 13 stars are arranged around the periphery, the date 1855 is below. On the reverse, the denomination ONE CENT is centered within a laurel wreath, UNITED STATES OF AMERICA is at the border. Struck in nickel composition (40% nickel, 60% copper) or German silver (75% copper, 12% nickel, 13% zinc) with a plain edge. Identified as Judd-171 on the NGC holder, although the exact composition remains unknown.

Considerable strike weakness on both sides is undoubtedly the result of a hard metallic composition that was unfamiliar to Mint workers of that time. The surfaces are light nickel-gray with traces of pale gold toning. (#11736)

Desirable 1855 Judd-171 Flying Eagle Cent, MS62

- 1230** 1855 Flying Eagle Cent, Judd-171, Pollock-196, Low R.7, MS62 NGC. An eagle flying left dominates the obverse, 13 stars are arranged around the periphery, the date 1855 is below. On the reverse, the denomination ONE CENT is centered within a laurel wreath, UNITED STATES OF AMERICA is at the border. Struck in nickel composition (40% nickel, 60% copper) or German silver (75% copper, 12% nickel, 13% zinc) with a plain edge. Identified as Judd-171 on the NGC holder, although the exact composition remains unknown.

A pleasing light nickel-gray example with an above average strike and satiny luster. Bold clash marks are visible on each side of this piece. (#11736)

Attractive 1858 Judd-192 Flying Eagle Cent, PR63

- 1231** 1858 Flying Eagle Cent, Judd-192, Pollock-235, R.5, PR63 NGC. The obverse is the familiar Small Letters 1858 cent. The pattern reverse generally resembles the 1860 regular issue reverse, but there is no shield at the top and the wreath is closed. Struck in copper-nickel with a plain edge. Satiny, moderately reflective fields lack the deeply mirrored appearance of most proofs, the result of a challenging composition to work. Attractive light tan with a few reverse spots. (#11842)

**Popular 1858 Flying Eagle Cent Pattern
Judd-202, PR63**

- 1232 1858 Flying Eagle Cent, Judd-202, Pollock-245-246, R.5, PR63 PCGS.** Snow-PT20. The small eagle obverse with open claws and raised wings. The tall, thin obverse letters probably represent Paquet's style. The reverse is similar to the regular issue 1859 Indian cent. Struck in copper-nickel with a plain edge. Snow states, "A very rare pattern, probably no more than 10 struck in all. These were probably struck after the 6 leaf laurel wreath reverse was adopted in 1859." In other words, PT20 is likely a restrike from muled dies. The variety with six leaf clusters within the laurel wreath is much scarcer than the Pollock-245, Snow-PT19 five leaf clusters variety. The fields are brightly reflective with a significant presence of reddish patina on each side. Lightly spotted. (#11867)

**Lovely 1858 Flying Eagle Cent, PR64
Judd-202, Pollock-246**

- 1233 1858 Flying Eagle Cent, Judd-202, Pollock-246, PR64 NGC.** Snow-PT20, R.7. The Small Eagle obverse with open claws and raised wings. The tall, thin obverse letters represent Paquet's style. The reverse is similar to the regular issue 1859 Indian cent, in this case with leaves in clusters of six. Struck in copper-nickel with a plain edge. Fully mirrored gold surfaces are visible through splendid orange and iridescent toning. (#11867)

**Copper-Nickel 1858 Indian Cent Pattern
Judd-213, PR61**

- 1234 1858 Indian Cent, Judd-213, Pollock-257, R.7, PR61 PCGS.** Eagle Eye Photo Seal. PT-23. Low Date with Breen's Reverse C. A transitional issue, the obverse is similar to the Indian cent issued in 1859, with the broad bust tip rather than narrow. The reverse is identical to the issued 1858 Low Leaves Flying Eagle cent with high leaves. Struck in copper-nickel with a plain edge. Only a dozen or so pieces are known. The original whitish-tan color now has a significant presence of light brown and pale lilac over each side. (#11897)

**1858 Indian Cent Pattern
Judd-213, PR62**

Scarce Narrow Bust, Low Leaves Variant

- 1235 1858 Indian Cent, Judd-213, Pollock-252, R.7, PR62 NGC.** Ex: Jules Reiver Collection. Snow PT-30. Snow writes, "The adopted head used in 1859 and 1860 (Type 1). Much scarcer than the broad bust point combinations. Probably no more than 10 examples struck." The Narrow Bust Point, Low Leaves subvariety of Judd-213. The denomination appears to be misaligned, with ONE a little too far to the left above CENT. Struck in copper-nickel with a plain edge. A tall wire rim is present across most of the reverse and on the obverse between 12 and 3 o'clock, and the reverse rim is sharply beveled, as made, between 6 and 9 o'clock, features for study by the specialist. This golden-brown piece is sharply struck but ONE CENT appears lightly hubbed. Several wispy pinscratches across the central reverse limit the grade. Ex: Jules Reiver Collection (Heritage, 1/2006), lot 21886. (#11897)

**1859 Indian Cent With Ornamental Shield
Judd-227, PR61**

- 1236 1859 Indian Cent, Judd-227, Pollock-271, Low R.6, PR61 ANACS.** Snow PT-3. The regular issue obverse of the Indian cent is paired with the reverse that shows a highly ornamental scroll at the top of the oak wreath. Struck in copper-nickel with a plain edge. This medium-brown example lacks sharpness on some of the feather tips and shows a light contact mark in the left obverse field. (#11930)

**Pleasing Judd-228 1859 Indian Cent
Transitional Pattern, PR64**

- 1237 1859 Indian Cent, Judd-228, Pollock-272, R.1, PR64 PCGS.** Snow-PT4. The transitional Pointed Bust Type of 1860 but with date 1859. The reverse displays the oak wreath and shield design first struck for circulation on 1860 cents, instead of the simpler laurel wreath reverse used on business strike 1859 cents. Struck in copper-nickel with a plain edge. Warm salmon and orange shadings dominate the eye appeal of this near-Gem, a well-defined beauty with just a handful of stray flaws scattered on each side. (#11934)

**Desirable 1860 Copper Five Dollar
Judd-272, PR63 Brown**

- 1238 1860 Five Dollar, Judd-272, Pollock-320, Low R.6, PR63 Brown NGC.** The obverse introduces the right-facing bust of Liberty with three large stars on the cap, a familiar motif within the Standard Silver series and first used on Judd-271 and Judd-272. The date is quite small. The reverse features a small eagle with a curved shield, clutching the banner bearing E PLURIBUS UNUM in its beak along with the usual olive branch and arrows in its claws. Struck in copper with a reeded edge.

Lovely deep brown surfaces exhibit delicate blue and iridescent toning on each side, with fully mirrored fields. Minor peripheral surface marks are of little concern. Approximately two dozen examples survive.

From The Frank M. Stirling Collection, Part Two. (#12078)

- 1239 1862 Half Dollar, Judd-295, Pollock-353, R.5, PCGS Genuine.** A regular issue obverse die is paired with a pattern Seated half reverse that has the legend GOD OUR TRUST sans scroll above the eagle. Formerly housed in a green label PCGS PR61 holder, and it was in that holder when it appeared as lot 1585 in Bowers and Merena's January 1994 Lexington Sale. The cataloger of that lot stated, "some heavy pitting is noted in the reverse field; probably the only feature that prevented PCGS from assigning a considerably higher grade." The PCGS Genuine No Grade code of 93 corresponds to "Planchet Flaw." Attractively toned golden-brown, ruby-red, and gunmetal-blue. (#60445)

**Bold 1863 IN GOD WE TRUST Half Dollar
Judd-343, Low R.7, Proof Details**

- 1240 1863 Half Dollar, Judd-343, Pollock-415, Low R.7—Improperly Cleaned, Lacquered—NCS. Proof Details.** The obverse die is the design used on regular-issue half dollars in 1863. The reverse features the normal perched eagle design, with the addition of the scroll and motto IN GOD WE TRUST above the eagle's head. Struck in copper, with a reeded edge.

Boldly struck with light orange surfaces from improper cleaning, now with splashes of iridescence from the lacquer. About a dozen of these are known, and examples appear infrequently.

From The Frank M. Stirling Collection, Part Two. (#60505)

Choice Proof 1865 No Rays Shield Nickel, Judd-418

- 1241 1865 Shield Five Cents, Judd-418, Pollock-490, High R.6, PR64 PCGS. CAC.** This pattern mule pairs a regular issue 1865 obverse with a regular issue No Rays reverse die, Fletcher Hub IIc, first used to strike business strike 1869 shield nickels. From this evidence, one can safely conclude that the present pattern was struck in 1869 or later despite its 1865 date. Struck in nickel with a plain edge. A well struck near-Gem with light chestnut toning and an occasional wisp of carbon. Housed in a first generation holder. Population: 3 in 64, 9 finer (5/09). (#60600)

**Gem Proof 1866 Shield Nickel Pattern
Judd-490, Struck in Copper**

- 1242 1866 Shield Five Cents, Judd-490, Pollock-578, Low R.7, PR65 Brown PCGS. CAC.** Shield design obverse, similar to that adopted, but with a smaller motto and date divided at the base of the shield. Knobbed or "Dutch" 5 inside a laurel wreath on the reverse. Struck in copper with a plain edge. A fully struck Gem that reveals mauve-red, apple-green, and sky-blue colors when confronted with light. Only the faintest hairlines on the left reverse field deny an even higher assessment. Certified in an old green label holder. *Ex: Pittsburgh Signature (Heritage, 8/2004), lot 7920. (#60686)*

**Gem Proof Judd-495 Copper
1866 Shield Nickel**

- 1243 1866 Shield Five Cents, Judd-495, Pollock-582, High R.7, PR65 Brown PCGS. CAC.** A Shield design on the obverse is quite similar to the regularly issued design, although the shield is lower in the field, with the ball at the bottom dividing the date. At the top of the obverse, IN GOD WE TRUST is in very small letters. The reverse has a plain 5 inside a wreath consisting of two laurel branches tied at the bottom by a ribbon with bow. Outside the wreath, the statutory legend begins at 8 o'clock and ends at 4 o'clock. Struck in copper with a plain edge. Toned chocolate-brown with olive, aqua and rose undertones. Exactly struck and undisturbed with no evidence of carbon. The single finest of only five pieces certified by either major service. Encapsulated in an old green label holder.
Ex: Superior, 10/1992, lot 1207, which realized \$6,875. (#60691)

- 1244 1866 Shield Five Cents, Judd-496, Pollock-582, High R.7—Corroded—NCS. Proof, AU Details.** Shield nickel pattern with the obverse close to the adopted design except for the small motto and ball below the shield that divides the date. The reverse is distinctly different with a Short 5 in the center, surrounded by a laurel wreath, and UNITED STATES OF AMERICA around the upper periphery. Struck in bronze with a plain edge. The deep reddish-brown surfaces are well defined but moderately granular and pitted. (#60692)

Choice Cameo Proof Judd-608 1868 Cent

- 1245 1868 One Cent, Judd-608, Pollock-673, R.4, PR64 Cameo NGC. CAC. Incorrectly designated by NGC as Judd-605.** The design closely resembles the contemporary three cent nickel, but only a single pillar represents the denomination within the wreath, and the ribbon ends are more prominent. Struck in nickel with a plain edge. Pollock variety 2 with the 1 in the date centered over a denticle. Flashy and untoned with an exquisite strike and only trivial pinpoint carbon. (#60820)

- 1246 1869 Standard Silver Quarter Dollar, Judd-733, Pollock-814, R.5, PR63 PCGS.** This standard silver variety depicts Liberty with a headband adorned with a single star. Her long hair is tightly bound. The reverse displays the denomination within a wreath of oak and laurel leaves. Struck in silver with a reeded edge. Both sides exhibit deep lavender-gray toning with hints of interspersed golden-brown. A sharply struck and slightly glossy Select representative with no discernable blemishes. Encased in a green label holder. Population: 12 in 63, 14 finer (6/09). (#60960)

Stunning 1870 Judd-827 Ten Cent, PR65 Red Cameo

- 1247 1870 Standard Silver Ten Cents, Judd-827, Pollock-917, R.7-8, PR65 Red Cameo NGC.** A left-facing seated Liberty holds a shield at her right side and an olive branch in her left hand. A scroll inscribed with LIBERTY flows across the shield, and a crudely fashioned cap and pole are suspended in the background. UNITED STATES / OF AMERICA occupies the periphery with the date, 1870, in exergue. On the reverse 10 / CENTS is within an open wreath of cotton and corn, tied with a bow at the bottom. STANDARD—in small letters—is found at the edge above the wreath, and the rim is unusually wide. Struck in copper with a reeded edge This stunning Gem is fully brilliant with pale lavender and rich orange Mint surfaces, fully mirrored fields, and bold devices. A few minor splashes of steel and iridescent toning are evident on the obverse. (#81071)

Lemus 1870 Judd-877 Quarter, PR63

- 1248 1870 Standard Silver Quarter Dollar, Judd-877, Pollock-974, Low R.7, PR63 NGC.** The obverse displays a seated figure of Liberty facing left with 13 stars arranged around the border and the date below. Liberty supports a shield with her left (facing) hand, over which a scroll inscribed with LIBERTY is draped. The reverse depicts the denomination 25 / CENTS within a wreath of cotton and corn. The word STANDARD is at the top. Struck in silver with a plain edge. A splendid cameo proof, although undesignated as such, with light gold and iridescent toning over the mirrored fields on both sides. All of the design elements are bold, and the surfaces are exceptional, other than the typical faint hairlines encountered at the grade level (and often encountered on Farouk coins).
Ex: King Farouk; Palace Collections of Egypt (Sotheby's, 2/1954), lot 1853; later, Stack's via private treaty; Lemus Collection, Part Two (Heritage, 1/2009), lot 1744.
From The Bay State Collection, Part One. (#61121)

Lovely 1870 Judd-900 Quarter, PR64

- 1249** 1870 Standard Silver Quarter Dollar, Judd-900, Pollock-1015, R.5, PR64 NGC. A Standard Silver design with the figure of Liberty wearing a headband inscribed LIBERTY. A scroll occupies the exergual space below the bust where the date would normally be placed. The reverse has 25 CENTS 1870 in the center and is surrounded by a wreath of cotton and corn with the word STANDARD above. Struck in silver with a reeded edge. This delightful near-Gem has vibrant iridescent toning over fully mirrored fields and a trace of contrast. (#61144)

The Farouk-Lemus 1870 Judd-983 Half Dollar PR65 Brown

- 1250** 1870 Standard Silver Half Dollar, Judd-983, Pollock-1103, High R.7, PR65 Brown NGC. Liberty faces right, her hair tied in a bun, wearing a starless diadem inscribed LIBERTY. IN GOD WE TRUST is on a scroll at the bottom rim, with UNITED STATES OF AMERICA around. On the reverse a wreath of corn and cotton encloses 50 / CENTS, the latter in an upcurving arc, with STANDARD at the upper rim and the date 1870 inside the wreath. Struck in copper with a reeded edge. Tinges of brilliant blue touch the high points of this lovely and well-struck Gem, tied for the finest certified.
Ex: King Farouk; "Palace Collections of Egypt" (Sotheby's, 2/1954), lot 1849; Gentleman's Study Collection (Coronet Coin), lot 62; Lester Merkin (2/1971), lot 902; Lemus Collection, Part Two (Heritage, 1/2009), lot 1773.
From The Bay State Collection, Part One. (#61229)

**Magnificent PR66 Judd-1068
1871 Indian Princess Half Dime**

- 1251** 1871 Half Dime, Judd-1068, Pollock-1204, High R.7, PR66 PCGS. CAC. Ex: HW Bass Jr. Liberty is seated facing left on the obverse. The date is below. She is wearing an Indian headdress and holding a liberty pole with her right hand. Her left hand rests on a globe inscribed LIBERTY. A circle of 13 stars surrounds her. The reverse design is the same as was used to coin regular-issue half dimes. Struck in silver with a reeded edge. About a half dozen silver strikings are known, and examples were also produced in copper and aluminum. Deeply mirrored, the fields on each side show pronounced die striations. Mottled gray-russet and blue toning is seen over each side. Tied with an NGC PR66 as the finest certified by the two major services.
Ex: Stanley Kesselman, 11/1971; Harry W. Bass, Jr. Collection, Part I (Bowers and Merena, 5/1999), lot 1079. (#61327)

**Memorable PR66 Standard Silver
1876 Indian Princess Quarter, Judd-1096**

- 1252** 1871 Standard Silver Quarter Dollar, Judd-1096, Pollock-1097, Low R.7, PR66 PCGS. CAC. Ex: Bass. The Longacre Seated design that features an Indian princess representing Liberty. Her hand steadies a globe, while the other hand holds a Liberty pole with cap on top. There are flags behind her. The reverse expresses the denomination and depicts a wreath of cotton and corn. Struck in silver with a reeded edge. Deeply reflective on each side with lovely rose colored toning around the obverse margin and multicolored iridescence around the reverse. A high grade example with an outstanding pedigree.
Purchased by Harry Bass from Stanley Kesselman, 11/1971; Bass I (Bowers and Merena, 5/1999), lot 1139; Baltimore Signature (Heritage, 7/2003), lot 10024, which realized \$9,775. (#61355)

Rare 1871 Copper Quarter, Judd-1102, PR65 Brown

- 1253** 1871 Quarter Dollar, Judd-1102, Pollock-1238, High R.7, PR65 Brown NGC. The regular dies issue of 1871, but struck in copper with a reeded edge. Examples of other silver and gold denominations struck in copper are known for this year with similar rarity, which suggests that sets were purposely made. The brown surfaces show an occasional speckling of blue on each side, with the original mint red just below the brown patina. Sharply defined throughout, with moderate reflectivity in the fields.
From The Bay State Collection, Part One. (#61361)

Near-Gem Proof 1873 Judd-1293 Trade Dollar

- 1254** 1873 Trade Dollar, Judd-1293, Pollock-1435, R.4, PR64 NGC. The design is similar to the issued Trade dollar, but Liberty's left hand rests on a globe, her right hand holds a staff, and plow handles sprout from behind the globe. On the reverse, the banner bearing E PLURIBUS UNUM is clutched by the eagle in its beak, and the eagle clutches a Federal shield in place of the usual olive branch. Struck in silver with a reeded edge. This prominently mirrored near-Gem has beautiful ocean-blue, rose-red, and straw-gold obverse patina. The reverse has similar shades in addition to a deeper blush of mauve along the left border.
From The Bay State Collection, Part One. (#61578)

1878 Judd-1550A Morgan Dollar, Proof Details

- 1255** 1878 Morgan Dollar, Judd-1550A, Pollock-1723, Low R.6—Improperly Cleaned, Lacquered—NCS. Proof Details. The obverse is virtually that of the adopted design save that the bust point is nearer to star 1, while the reverse differs primarily by having three olive leaves to the lower left of the eagle, rather than a cluster as seen on the regular issue dies. This design lacks the notches on the undersides of the wings. Struck in silver with a reeded edge.
A fully defined example of this popular Morgan dollar pattern with deeply mirrored fields, and satiny devices. Both sides are light silver-gray with splashes of iridescent toning from the lacquer.
From The Frank M. Stirling Collection, Part Two. (#61911)

PR66 Silver 1879 Washlady Dime, Judd-1584

- 1256** 1879 Washlady Ten Cents, Judd-1584, Pollock-1777, High R.6, PR66 PCGS. Charles Barber's famous pattern design with Liberty's bountiful hair bound behind the head. The obverse has UNITED STATES OF AMERICA around the border with the date below the bust. The reverse features a wreath around a beaded circle that contains ONE DIME with E PLURIBUS UNUM framed above. Struck in silver with a reeded edge. Lilac and sea-green toning graces the reflective and boldly impressed surfaces. The reverse is double struck within the collar, rotated a few degrees counterclockwise between the two blows. Population: 6 in 66, 1 finer (6/09). (#61961)

**Gorgeous PR66 1879 Morgan Dime
Judd-1588, Struck in Silver**

- 1257** 1879 Morgan Ten Cents, Judd-1588, Pollock-1781, High R.6, PR66 PCGS. CAC. The obverse features the same portrait of Liberty as used on the Morgan dollar, here adapted to the format of a dime. The reverse has ONE DIME in the center and is encircled by a wreath composed of six bunches of four laurel leaves each. The second U in PLURIBUS is repunched. Struck in silver with a reeded edge. This flashy Premium Gem exhibits rich cherry-red and lime-green toning. The strike is unimprovable, as is the eye appeal. Population: 2 in 66, 3 finer (6/09). (#61965)

Important 1883 Judd-1714 Nickel, PR64 Cameo

- 1258** 1883 Liberty Head Five Cents, Judd-1714, Pollock-1919, Low R.6, PR64 Cameo PCGS. The design is similar to the regular-issue 1883 No CENTS Liberty nickel, but LIBERTY is absent on the coronet, instead spread across the upper obverse rim. The stars are smaller and arranged 6 x 7. Struck in nickel with a plain edge. The fields are deeply mirrored and the devices heavily frosted, yielding a pronounced cameo contrast on each side. Nearly brilliant with just a hint of pale golden on each side. (#62131)

PR66 Judd-1724 1884 Five Cent

- 1259** 1884 Five Cents, Judd-1724, Pollock-1934, Low R.6, PR66 PCGS. CAC. Eastman Johnson's five-cent pattern struck with an octagon-shaped hole in the center. The obverse has the date and UNITED STATES OF AMERICA around the outside with 13 stars encircling the center. The reverse simply states FIVE CENTS and displays two shields. Struck in nickel with a plain edge. A razor-sharp Premium Gem with delicate tan-gold toning and pristine preservation. Population: 4 in 66, 6 finer (5/09). (#62154)

Desirable Judd-1767 1896 Cent Pattern in Nickel

- 1260** 1896 One Cent, Judd-1767, Pollock-1982, Low R.7, PR63 PCGS. The obverse has a scroll reading LIBERTY across a shield with thirteen stripes. Behind are two crossed poles, topped by an eagle and a liberty cap. E PLURIBUS UNUM is above, 1896 is below. The reverse displays ONE CENT within a curved olive sprig with UNITED STATES OF AMERICA around. Both sides have beaded borders. Struck in nickel with a plain edge. A very rare variety, one of only a handful of post-1885 patterns that is collectible today, offered here with light golden peripheral toning and faintly hairlined nickel-white centers. (#62220)

Rare '1759' Martha Washington 'Half Dollar'
Judd-2132, High R.7

- 1261 (1759 dated) Martha Washington Half Dollar-Sized Test Piece, Judd-2132, Pollock-2083, High R.7, MS61 NGC. 11.2 gm. The obverse has a portrait of Martha Washington facing right, and the reverse shows a view of Mount Vernon. Struck in cupronickel-copper (multi-layer composite) with a reeded edge. The alloy was first used for half dollars in 1971, but the actual year the piece was struck is unknown. Untoned and satiny with a slightly glossy appearance. The reverse die has four closely spaced sets of deep clashmarks that show much of Martha's profile.

General Motors Pattern Cent, Pollock-4060
MS62 Red and Brown

- 1262 Undated (ca. 1967) General Motors Pattern Cent, Pollock-4060, R.5, MS62 Red and Brown NGC. An experimental striking on the General Motors roller press with the head of Liberty facing left on the obverse, a wreath on the reverse, and nonsensical legends on each side. Control code 27-M. Struck in copper with a plain edge. Somewhat ill-defined at the borders, this piece has pleasing medium brown surfaces with splashes of original orange color, especially on the reverse.

MS63 Red and Brown Pattern Cent Struck
by General Motors, Pollock-4060

- 1263 Undated (ca. 1967) General Motors Pattern Cent, Pollock-4060, R.5, MS63 Red and Brown NGC. General Motors pursued a coin press contract with the U.S. Mint during the 1960s. Their roller press proved to be high volume but required too much maintenance to remain operational. This example has an obverse layout similar to the Lincoln cent. The legends are nonsense. Control code 25-L. Struck in copper with a plain edge. An impressive piece, one of the finest we have seen, with virtually full original orange color on each side.

GOLD DOLLARS

- 1264 1849 Open Wreath MS64 ★ NGC. Breen-6002. Distant stars, star at 5 o'clock repunched. **Incorrectly attributed by NGC as a No L variety.** The bust truncation does display an L. The obverse is highly prooflike, undoubtedly the reason this coin has received a Star designation. The reverse displays cartwheel luster. Precisely struck and minimally abraded. (#7502)
- 1265 1849 Closed Wreath MS63 PCGS. Breen-6005, his "heavy date" variety. A sharply impressed and satiny representative of this first year gold type coin. Marks are refreshingly difficult to find, even upon magnification. Population: 41 in 63, 54 finer (6/09). (#7503)

Scarce 1849-C AU53 Closed Wreath Gold Dollar

- 1266 1849-C Closed Wreath AU53 NGC. Variety One (formerly Variety 2-B), the only one known. Yellow-gold surfaces display whispers of apricot, mostly at the peripheries, and mint-green undertones. The reverse design elements are well defined but the usual weakness is visible in the hair at the forehead and ear. Some circulation marks are noted, but these are not as prominent as often seen on representatives of this issue. Scarce in AU grades and quite rare in Mint State. (#7505)

Elusive 1849-D Gold Dollar, AU58

- 1267 1849-D AU58 NGC. Variety 1-A. The obverse design details are quite mushy, especially along the rim and denticles, and moderate wear is evident on Liberty's hair. The reverse is well struck, however. The surfaces are satiny and smooth, with no significant marks on either side. The most common Type One gold dollar from the Dahlonega Mint, yet difficult to locate at any grade level, according to the *Encyclopedia of U.S. Gold Coins*. (#7507)

Lovely MS64 ★ 1849-O Gold Dollar

1268 1849-O Open Wreath MS64 ★ NGC. CAC. This lustrous and unabraded near-Gem has a bold strike, although details of the wreath and date have been weakened by a lapped die, as made. All 1849-O gold dollars are the Open Wreath subtype, which suggests that no Closed Wreath dies were shipped to New Orleans before 1850. The sole 1849-O gold dollar to earn a Star designation from NGC (6/09). (#7508)

1269 1851 MS64 NGC. Pleasing luster issues from the satiny surfaces of this greenish-gold near-Gem dollar. A well struck piece with some light reverse marks. (#7513)

1270 1851-C AU58 NGC. Variety 1. This piece has slight strike doubling (which makes the mintmark appear repunched) and is likely a late die state due to the multiple, overlapping heavy clash marks. It also has the same die crack on (O)F AM(ERICA) on the reverse. The bright fields enhance the colorful reddish patina seen on each side. A couple of larger abrasions are seen in the fields along with numerous, less-visible ones. Die striations appear in the fields, as usual. (#7514)

1271 1852 MS64 NGC. Pumpkin-gold centers are framed by subtle olive-green shades. Lustrous and impressively unabraded. All devices and legends are well struck, although portions of the dentils are blended. (#7517)

1272 1852-C XF40 PCGS. Variety 2. Rich orange-gold patina is accented with electric-blue and reddish-gold. Fairly well detailed despite wear on the high points. Devoid of significant marks. (#7518)

1273 1853 MS64 NGC. A common date in the Type One gold dollar series, this piece survives from a mintage of more than 4 million coins, produced at the height of the California gold rush era in our nation's history. Both sides are brilliant with frosty yellow-gold luster and excellent design definition. (#7521)

Delightful MS66 1853 Gold Dollar

1274 1853 MS66 PCGS. CAC. Silver coins were reduced in tenor and returned to circulation in 1853. The ample supply of silver circulation coinage meant the end of high mintages of gold dollars, although more than 4 million pieces were struck at Philadelphia in 1853. The present Premium Gem is much nicer than the usual 1853, which grades from AU55 to MS64. Well struck and thoroughly lustrous with one small strikethrough near the 3 in the date. Population: 26 in 66, 11 finer (5/09). (#7521)

1275 1854 Type One MS64 NGC. An attractive and interesting specimen with a complete wire rim around both sides. Lustrous and carefully preserved, with light orange-gold and pale rose toning. (#7525)

1276 1854 Type Two MS62 PCGS. Wisps of apricot rest on the yellow-gold surfaces of this relatively well struck dollar. Light handling marks are visible over each side. (#7531)

Scarce Type Two 1854 Gold Dollar MS63

1277 1854 Type Two MS63 PCGS. The popular Type Two design was struck for only three years, with the final date limited to a tiny San Francisco mintage. Mintages were much lower during than this period than in former years of the denomination, since silver had returned to circulation. Gold type set collectors are always on the lookout for quality examples. The present butter-gold piece is well impressed, and only a minor mark between the ER in AMERICA limits the grade. Struck from clashed dies. (#7531)

Choice Type Two 1854 Gold Dollar

1278 1854 Type Two MS64 PCGS. A beautiful near-Gem of this coveted ephemeral gold type. Peach-gold and olive toning graces satiny and unmarked surfaces. James B. Longacre's small Indian Head was designed to cause a full strike for both the bust and the wreath. The high relief of the bust, however, led to softness of impression on the central portions of DOLLAR and the date. That, plus a propensity for prominent clashmarks within the wreath, may have led to the quick replacement of the Type Two design. In 1856, the Type Three design was introduced, based on the three dollar gold piece which had minimal striking issues. (#7531)

Gorgeous MS62 1855 Gold Dollar

1279 1855 MS62 PCGS. Uncommonly beautiful for the MS62 designation, this Type Two gold dollar would make an excellent addition to a type or date set. Green-accented lemon-gold fields offer remarkable radiance, and the portrait offers far better definition than the norm. Wispy abrasions contribute to the grade. (#7532)

Attractive 1855 Gold Dollar, MS62

- 1280 1855 MS62 PCGS.** The mintage of this issue is remarkably similar to that of its immediate predecessor, the 1854, and the two mintages are only separated by around 25,000 pieces. The 1855 is the slightly smaller of the two issues, and is also slightly scarcer than the 1854. Both dates are good choices for type purposes. This example is boldly struck overall, if somewhat weak in the centers, with shimmering luster and yellow-gold toning. There are extensive die clash marks, which is typical, and a few superficial grazes appear on each side. (#7532)

Vibrant 1855 Gold Dollar, MS64

- 1281 1855 MS64 NGC.** As found on many 1855 gold dollars, the present piece displays strike weakness in the central reverse design, along with bold clash marks on both sides. Redeeming qualities are the vibrant luster, well preserved surfaces, and attractive straw-gold coloration throughout. The 1854 and 1855 gold dollars are typically selected by those building type sets, since both dates were struck in relatively large quantities and are the most available of the six different Type Two issues. However, in near-Gem or better condition, neither date is common. NGC has graded 46 numerically finer pieces (6/09). (#7532)

1856-S Type Two Gold Dollar, MS61

- 1282 1856-S Type Two MS61 NGC.** Breen-6044, with a normal mintmark. The obverse of this late state example has several fine die cracks in the fields. The normal mintmark and doubled mintmark varieties show relatively similar populations. This satiny Mint State piece has rich orange luster and a few faint surface marks. A wonderful example that will please the advanced collector. Census: 22 in 61, 16 finer (6/09). (#7536)

Gem Slanted 5 1856 Gold Dollar

- 1283 1856 Slanted 5 MS65 PCGS.** A common variety in lightly circulated grades, the 1856 Slanted 5 is surprisingly challenging as a Gem. The present lustrous example is remarkably devoid of abrasions and is well struck aside from the O in DOLLAR, which is opposite Liberty's high relief cheek. Encapsulated in a green label holder. Population: 13 in 65, 11 finer (5/09). (#7540)

Rare 1863 Gold Dollar, AU55

- 1284 1863 AU55 ICG.** The 1863 gold dollar, struck during the height of the Civil War, saw only 6,200 circulation strikes. It is a rare coin in any level of preservation. The bright brass-gold surfaces of this Choice AU specimen exhibit well struck devices and are minimally abraded. An as-struck planchet flaw is visible in the lower obverse field at 6 o'clock. (#7562)

Scarce Select Mint State 1865 Gold Dollar

- 1285 1865 MS63 PCGS.** A pleasing, original appearance is the hallmark of this Select Mint State example. The design elements are well struck including the date, which is fully rendered. A satiny coin, free of distracting marks on either side. This low mintage issue of a mere 3,725 pieces is scarce in Uncirculated condition. Population: 7 in 63, 19 finer (6/09). (#7564)

Beautiful MS67 1874 Gold Dollar
Finest Certified at PCGS

- 1286 1874 MS67 PCGS. CAC.** In the years following the million-plus outpouring of gold dollars in 1862, the highest mintage for the denomination was in 1874, though that year's production was under 200,000 pieces. This Superb Gem is among the finest survivors, with strong and swirling luster enlivening wheat-gold surfaces. Boldly struck and carefully preserved, tied for the finest certified at PCGS. Population: 30 in 67, 0 finer (5/09). (#7575)

- 1287 1881 MS66 NGC.** Yellow-gold and peach coloration embraces this well struck Premium Gem. Lightly frosted motifs stand out against the semiprooflike fields. A nicely preserved coin. (#7582)

Delightful MS65 1885 Gold Dollar

- 1288 1885 MS65 PCGS.** An exquisitely detailed Gem representative of this later gold dollar issue, impressively lustrous with bright canary-gold color overall and a splash of peach at the upper reverse. Remarkable quality and eye appeal in all respects. PCGS has certified just 40 finer examples (5/09). (#7586)

- 1289 1885 MS65 NGC.** The 11,156 coin mintage ranks eighth out of 10 gold dollar issues of the 1880s, but its total NGC and PCGS combined population across all grades ranks 5th out of 10 issues. This impressive Gem has satiny, reflective luster, brilliant yellow luster, and wisps of rose and light blue toning. (#7586)

Impressive MS66 1889 Gold Dollar

- 1290 1889 MS66 NGC.** The low-mintage gold dollar issues of the 1880s are a popular hunting ground for type collectors seeking high grades, and the final-year 1889 issue offers a range of possibilities. This Premium Gem is beautifully detailed with swirling luster. Warm yellow-gold and peach surfaces show a small alloy fleck to the left of Liberty's nose. (#7590)

PROOF GOLD DOLLARS

Wonderful 1861 Gold Dollar, PR67 Cameo

- 1291 1861 PR67 Cameo NGC.** Although the 1861 mintage of 1861 proof gold dollars is recorded as 349 pieces the great majority was apparently melted as unsold, leaving few extant specimens. Walter Breen in his 1988 *Encyclopedia* says "probably fewer than 25 survive, some impaired." NGC/PCGS population data are more or less in line with Breen's estimates—the two services have graded 34 examples, 12 of which are Cameos (a number of these are undoubtedly resubmissions).

Immaculately preserved brass-gold surfaces greet the observer of this gorgeous Superb Gem. An exacting strike delivers crisp definition to the frosted design elements that stand out against the mirrored fields. This is a wonderful example of this Civil War era specimen that is sure to draw serious attention from aficionados of proof gold coinage. Census: 2 in 67 Cameo, 0 finer (6/09). (#87611)

CLASSIC QUARTER EAGLES

Prooflike Near-Gem Classic 1834 Two and a Half

- 1292 1834 MS64 Prooflike NGC.** Large Head, Breen-6140, McCloskey-A, R.3. A fully struck and flashy high grade example of the "Wide AM" variety. Several stars are repunched, as is the large 2 in the denomination. The fields are clean and there are no identifying marks. An outstanding representative of the 1834 Large Head variety, which is scarcer than its Small Head counterpart. Census: 6 in 64 Prooflike, 2 finer (6/09). (#77692)

- 1293 1836 Script 8 AU55 NGC.** Head of 1835, Breen-6143, McCloskey-D, R.2. The Head of 1835 is identified by star 6 nearly touching the hair curl above the coronet tip. Usually seen with a die crack through star 6 and the bust; however, this piece appears to have a perfect obverse die. Both sides have considerable luster, light greenish-gold surfaces, and few trivial abrasions. (#7694)

1836 Script 8 Two and a Half Mint State, Scarce Die Marriage

- 1294 1836 Script 8 MS60 NGC.** Head of 1835, Breen-6143, McCloskey-H, R.4. A scarce variety that retains the obverse die of McCloskey-D, paired later in life with a new reverse. Uncirculated examples of McCloskey-H are undoubtedly rare. The margins display a wide band of bright luster, and the surfaces appear unmarked, even when studied beneath a loupe.
Ex: FUN Signature (Heritage, 1/2008), lot 3766, which realized \$3,450. (#7694)

1836 Block 8 Classic Quarter Eagle, MS61

- 1295 1836 Block 8 MS61 NGC.** Head of 1837, Breen-6144, McCloskey-C, R.2. The reverse has a single small berry in the branch, a common 1836 quarter eagle variety, although still rare in Mint State. This attractive green-gold example is fully lustrous. The design motifs are weak at the center, but otherwise nicely defined. (#97694)

PCGS Genuine 1838-C Quarter Eagle, Variety 1

- 1296 1838-C PCGS Genuine.** Variety 1. This first-year Charlotte quarter eagle issue is scarce in any grade and immensely popular, as its low mintage of 7,880 pieces might indicate. The design elements are better defined than often seen on examples of the issue. Honey-gold patina covers both sides, each of which reveals fine hairlines. (#7697)

Scarce 1839-C Quarter Eagle

- 1297 1839-C PCGS Genuine.** Recut 39, Breen-6150, McCloskey-C, Variety-2, R.3. The 39 in the date was originally punched too low and was subsequently corrected. On the reverse, the tip of the branch extends to the right edge of the upright of the D in the denomination. This variety is thought to have had an original mintage of just 4,860 pieces and is considered to be the rarest of the three known varieties for the year. The present coin exhibits modest wear, with a slightly unnatural bright yellow appearance. This is a late die state specimen, as evidenced by the die cracks on the reverse. (#7699)

LIBERTY QUARTER EAGLES

- 1298 1840 XF45 NGC.** A luminous butter-yellow Choice XF example of this first Coronet quarter eagle issue. The strike is pleasing, and the wear is light and even. (#7717)

Elusive AU53 1840-C Two and a Half

- 1299 1840-C AU53 PCGS.** Variety 1. The initial Charlotte Mint Liberty quarter eagle issue has a small mintage of 12,822 pieces, most of which were lost or melted long ago. Luster fills design recesses, and neither side has any remotely mentionable marks. Liberty's eyebrow and the hair above the ear display light wear. Population: 9 in 53, 23 finer (5/09). (#7718)

Popular 1840-C Quarter Eagle, AU58

- 1300 1840-C AU58 PCGS.** Variety 1, the single die marriage known. This is a popular issue with collectors owing to its status as the first Liberty Head gold coin from the Charlotte Mint. A wisp or two of crimson visits the yellow-gold surfaces of this near-Mint State example. Generally well struck save for weakness in the centers of the lowermost stars and on the leg feathers. Light marks are evenly scattered over each side. Population: 6 in 58, 8 finer (5/09). (#7718)

Important 1840-C Two and a Half MS63, Tied for Finest Known

- 1301 1840-C MS63 NGC.** Variety 1. At the MS63 level, this piece is tied with six others at the top of the list of currently graded examples at NGC and PCGS combined. This is a very impressive coin. The striking details are well brought up on each side with no obvious areas of weakness. The flashy green-gold surfaces exhibit a strong semi-prooflike sheen in the fields with satiny mint luster intermixed. No singular marks on either side are present to identify this piece in future auction appearances. Census: 3 in 63, 0 finer (6/09). Ex: Ashland City Collection (Heritage, 1/2003), lot 4652. (#7718)

- 1302 1842-O AU53 NGC.** A greenish-gold cast is prevalent over both sides of this O-mint specimen. The surfaces are relatively clean and display hints of luster in the protected areas. The design elements reveal the typical weakness, especially in the central areas of the coin. (#7726)

Low Mintage 1842-O Quarter Eagle, AU55

- 1303 1842-O AU55 NGC.** Only 19,800 examples of the 1842-O quarter eagle were struck, and as such this issue has among the lowest production figures of any New Orleans Mint quarter eagle. Garrett and Guth (2006) comment that the '42-O was unknown in Mint State until a decade or so ago, and they believe that the inflated Mint State populations represent multiple submissions of a single coin. This high grade Choice AU example displays a typically shallow strike, with bright green-gold surfaces and some wispy hairlines and tiny abrasions. Census: 16 in 55, 36 finer (6/09). (#7726)
- 1304 1843 AU58 PCGS.** A scarcely worn survivor that offers rich yellow-gold color with considerable orange fire as well. Marks are few and largely scattered in the fields. Population: 10 in 58, 13 finer (5/09). (#7727)

Near-Mint Plain 4, Large Date 1843-C Two and a Half

- 1305 1843-C Large Date, Plain 4 AU58 NGC.** Variety 1. Honey-gold luster outlines the design elements of this scarce Charlotte quarter eagle. Marks are relatively minor for the grade, and the strike shows only selected incompleteness at the centers. From a mintage of only 23,076 pieces. Census: 24 in 58, 17 finer (6/09). (#7728)

Rare Select 1843-O Quarter Eagle Small Date, Crosslet 4

- 1306 1843-O Small Date, Crosslet 4 MS63 PCGS. CAC.** A satiny straw-gold quarter eagle that has an impressively unabraded appearance. A sharp strike except for the central letters in LIBERTY. The Small Date 1843-O is readily obtained in circulated grades, but Select Mint State examples are highly desirable. Population: 8 in 63, 4 finer (5/09). (#7731)

Condition Rarity 1845 Quarter Eagle, MS64

- 1307 1845 MS64 PCGS.** The 91,051-piece mintage of 1845 quarter eagles results in the most available issue from the Philadelphia Mint for the decade. Examples are available through the AU grades, though Mint State coins are elusive. The lustrous surfaces of this peach-gold specimen exhibit sharply struck design elements. Minute marks deny Gem classification. Population: 4 in 64, 0 finer (5/09). (#7737)
- 1308 1845-D—Damaged, Improperly Cleaned—NCS. XF Details.** Variety 6-I. Aside from typical softness at the hair over Liberty's ear and several of the obverse stars, this Dahlonega quarter eagle is well struck. Bright and hairlined yellow-gold surfaces show a number of digs and possible damage to the rims. (#7738)

Remarkable 1846-D Choice AU Quarter Eagle

- 1309 1846-D AU55 PCGS.** Variety 7-H. The 4 and 6 in the date show prominent repunching, and on the reverse the tip of the feather from the arrows extends into the opening of the mintmark. This specimen has surprisingly reflective yellow-gold surfaces and excellent eye appeal. The centers are somewhat soft, as typical for the issue, but the stars are well-defined. The 1846-D is scarce in About Uncirculated grades. Population: 18 in 55, 18 finer (6/09). (#7742)

Mint State 1846-D Two and a Half

- 1310 1846-D MS61 PCGS.** Variety 7-H, a rare reverse die with the mintmark virtually touching the claw. At least four dies are known, despite a stingy production of 19,303 pieces. Canary-gold toning visits this richly detailed example, which has a paucity of the small marks usually found on Dahlonega gold. Population: 4 in 61, 1 finer (5/09). (#7742)

Attractive 1848 CAL. Quarter Eagle, VF30

- 1311 1848 CAL. VF30 PCGS.** While the traditional survey of U.S. commemoratives begins with the Columbian Expedition half dollars of 1892, when one thinks about commemorative coinage in a broader, more international sense, a different candidate emerges: the CAL. quarter eagles dated 1848, struck from California gold with ceremony. The present example has less wear than expected of a VF30, although the strike is, as usual, incomplete on Liberty's curls and the eagle's plumage. The surfaces are bright and slightly glossy with minor granularity seen near star 10. A bold and comparatively affordable representative of this historic variety. (#7749)
-

**Desirable, Challenging AU58
1848-C Two and a Half**

- 1312 1848-C AU58 NGC.** Variety 1. The 1848-C is another challenging Charlotte quarter issue. A mere 16,788 pieces were struck, and most were melted long ago. The present green-gold piece has an exceptionally sharp strike, and neither side possesses any remotely mentionable marks. Census: 37 in 58, 16 finer (5/09). (#7750)
- 1313 1848-D—Improperly Cleaned, Repaired—NCS. AU Details.** Variety 10-M. The lower right obverse field has been smoothed, as has most of the reverse field. But this example has seen very little actual circulation, and the mintage is only 13,771 pieces. (#7751)
- 1314 1849 AU58 NGC.** Only a trace of rub prevents a Mint State grade for this lovely and scarce quarter eagle. It is possible that this piece, struck at the time of early gold receipts from California, actually contains some of the metal shipped from the West Coast. Lustrous greenish-gold surfaces exhibit bold details with reflective fields. Census: 55 in 58, 20 finer (5/09). (#7752)
-

Softly Patinated 1849-D Quarter Eagle, XF45

- 1315 1849-D XF45 NGC.** Variety 11-M. High Date, with the 1 in the date nearly touching the bust, the more common of the two obverses for the year. A subtle mix of yellow-gold, orange, mint-green, and lilac covers both sides. The design elements are well detailed, though the eagle reveals the usual minor strike weakness. Distributed small marks are in line with the grade designation. (#7754)
- 1316 1851-O AU58 NGC.** Breen-6214. The date is boldly doubled, most evident southwest of the 51. Traces of doubling are also visible left of 18. This near-Mint example is highly lustrous with hints of green on the yellow-gold surfaces. All design elements are boldly defined. (#7762)

Attractive 1852-D Quarter Eagle MS62

1317 1852-D MS62 NGC. CAC. Variety 15-M, the single variety identified for the year. This attractive survivor from an issue of just 4,078 pieces exhibits most of the noteworthy characteristics of the date. It has vibrant peripheral luster and bold central detail, with a degree of the usual softness noted at the dentils on each side. Unlike most of its peers, this straw-gold and lemon-gold piece is surprisingly unabraded, with only a few trivial errant marks on the left border of Liberty's neck. A top-notch piece that can stake a plausible claim to a place on the Condition Census. Census: 2 in 62, 3 finer (6/09). (#7765)

1318 1852-O AU58 NGC. A warm yellow-orange near-Mint example that offers considerable luster, including a degree of reflectivity. Well struck for the New Orleans issue with few flaws. NGC has graded 30 Mint State coins (5/09).(#7766)

Difficult AU 1854-C Two and a Half

1319 1854-C AU50 NGC. Variety 1. The 1854-C always catches the attention of collectors with its mintage of only 7,295 pieces. This example shows a few light marks on each side, but none are remotely relevant for the AU level. The central devices are softly struck on each side, as usually seen, but the stars and dentils are sharp. Both obverse and reverse display a slight accent of reddish patina around the margins. (#7770)

Impressive Near-Gem 1856 Quarter Eagle

1320 1856 MS64 PCGS. As Garrett and Guth state, "The 1856-S Liberty Head quarter eagle is the first truly collectible quarter eagle from the San Francisco Mint." This yellow-gold near-Gem is immensely lustrous and well-defined, with the only visible weakness present at the usual spot, the eagle's leg. Minimally marked and delightfully appealing. Population: 15 in 64, 9 finer (5/09). (#7777)

Elusive 1857-O Quarter Eagle, MS62

1321 1857-O MS62 PCGS. A remarkably alluring example of this scarce issue, this piece is well struck and lustrous, with a pleasing satin sheen across surfaces that display deep sea-green and peach toning. There are no disturbing abrasions on either side, but a few very faint hairlines are discerned in the fields. Garrett and Guth note that this final New Orleans Mint quarter eagle issue had a modest mintage of 34,000 coins, and that Mint State survivors are rare. Population: 8 in 62, 5 finer (6/09). (#7784)

Near-Mint 1857-S Quarter Eagle

- 1322 1857-S AU58 NGC.** Mint luster dominates the peripheries and fills the eagle and Liberty's hair. This crisply impressed Borderline Uncirculated representative has only a hint of friction on Liberty's eyebrow and nostril. Smooth overall with abrasions generally limited to the field beneath the hair bun. Census: 60 in 58, 21 finer (5/09). (#7785)

Seldom Seen Type One 1860 Two and a Half, MS61

- 1323 1860 Old Reverse, Type One MS61 PCGS.** The upper two arrowheads touch, and the third arrowhead touches the arrow shaft above. These are characteristics of the elusive Type One or Old Reverse. The majority of 1860 quarter eagles are the Type Two reverse, noted for minutely smaller arrowheads and letters. Of course, any 1860 quarter eagle is scarce, since only 22,563 pieces were struck. Orange-gold luster dominates the borders, eagle, and hair. Population: 1 in 61, 7 finer (6/09). (#97791)

Difficult AU 1860-C Two and a Half

- 1324 1860-C AU50 PCGS.** Variety 1. A minimally abraded straw-gold AU example that has glimmers of luster and the usual soft impression at the centers. Several shallow strike-throughs in the fields are present, typical for this rare date. The final Charlotte Mint quarter eagle issue, which had a meager mintage of 7,469 pieces. Population: 13 in 50, 27 finer (5/09). (#7792)

- 1325 1861 New Reverse, Type Two MS64 NGC.** Attractive orange toning encompasses this fully struck and scintillating example. Only the occasional faint luster graze prevents an even finer grade. The Type Two or New Reverse subtype is distinguished by slightly smaller arrowheads and legends. (#7794)

Appealing MS62 1862 Quarter Eagle

- 1326 1862 MS62 PCGS.** A delightful example of this Civil War issue with a five-figure mintage, which Garrett and Guth describe as "... many, many times rarer than the 1861." It is sharply struck with swirling wheat and yellow-gold luster. Though scattered marks and wispy abrasions preclude Select status, its eye appeal is strong. Population: 6 in 62, 12 finer (5/09). (#7796)

1865-S Two and a Half, AU58

- 1327 1865-S AU58 NGC.** Luster fills the borders and much of the devices. This golden-tan near-Mint Civil War quarter eagle has few marks, and the strike is good aside from the usual merging of detail on the eagle's left (facing) leg. A scant 23,376 pieces were produced, and survivors average XF. Census: 15 in 58, 5 finer (5/09). (#7802)

- 1328 1873 Open 3 MS64 NGC.** A mix of light green and yellow-gold patina resides on the lustrous, sharply struck surfaces of this near-Gem quarter eagle. A few light grazes deny Gem status. Census: 45 in 64, 9 finer (5/09). (#7817)

- 1329 1878 MS64 NGC.** Soft luster emanates from yellow-gold surfaces imbued with hints of light tan and green, and a well executed strike emboldens the design features. Some minuscule surface and rim marks preclude Gem classification. This issue becomes more difficult to acquire in finer grades. (#7828)

Bold Gem 1878 Quarter Eagle

- 1330 1878 MS65 PCGS. CAC.** In 1878, Philadelphia mintages of gold coins increased across all denominations, with the exception of the gold dollar. The Treasury apparently stockpiled gold coins in anticipation that they would attain parity with paper money and return to general East Coast circulation. Despite a larger production, the 1878 quarter eagle is very scarce as a Gem. Lustrous and boldly struck with smooth surfaces and deep pumpkin-gold toning. Population: 30 in 65, 5 finer (5/09). (#7828)

- 1331 1878-S MS63 PCGS.** Mostly pumpkin-gold, although the reverse field displays aquamarine. Well struck and satiny with generally smooth surfaces and an interesting lintmark (as made) between stars 4 and 5. Population: 28 in 63, 8 finer (5/09). (#7829)
- 1332 1882 MS62 PCGS.** Sharply struck with flashy yellow-gold surfaces. Minimally abraded for the grade with great eye appeal for this issue of just 4,000 business strikes. Population: 13 in 62, 35 finer (5/09). (#7834)
- 1333 1884 MS62 PCGS.** Gleaming straw-gold fields dominate the eye appeal of this sharply struck piece, one of just 1,950 business strikes produced for the year. Wispy abrasions and scattered ticks account for the grade. Population: 9 in 62, 18 finer (5/09). (#7836)

Flashy Select 1887 Quarter Eagle

- 1334 1887 MS63 PCGS.** A precisely struck, minimally marked, and decidedly prooflike high grade representative. A mere 6,160 pieces were coined, and the present piece may have been among the first to fall from the dies, since the fields are prominently flashy. Population: 17 in 63, 13 finer (5/09). (#7839)

Elusive 1887 Quarter Eagle, MS63

- 1335 1887 MS63 NGC.** A pleasing apricot-gold example with watery, semiprooflike fields and well defined devices. A few trivial surface blemishes define the grade. According to the *Encyclopedia of U.S. Gold Coins*: "The 1887 Liberty Head quarter eagle is a scarce coin in all grades. The date becomes increasingly elusive in the higher states of preservation." Census: 16 in 63, 10 finer (5/09). (#7839)

- 1336 1893 MS65 PCGS. CAC.** This amazing quarter eagle has bold design definition on both sides, with brilliant and highly lustrous surfaces that exhibit a strong quota of mint frost. Both sides are pristine, with no marks worthy of individual discussion. Gems such as the present example are elusive and always in demand. Population: 37 in 65, 14 finer (6/09). (#7845)

- 1337 1896 MS64 PCGS.** Variegated mint-green and peach toning adorns both sides of this near-Gem quarter eagle, and an impressive strike brings out crisp delineation on the design motifs. A couple of reddish-orange toning spots are visible on the obverse, and wispy marks are noted in the upper reverse field. (#7848)

- 1338 1896 MS64 PCGS.** A fully struck and originally toned peach and green-gold near-Gem. The fields are gorgeously smooth, and the jaw has only inconsequential contact. A scant 19,070 pieces were struck. (#7848)

Condition Rarity 1905 Quarter Eagle, MS68

- 1339 1905 MS68 NGC.** The 1905 is a common date in the Liberty Head quarter eagle series as is evident from the thousands of pieces graded by NGC and PCGS. More specifically, this issue is readily available through the Gem level. MS66 and MS67 coins are more challenging but can still be acquired with a bit of patience. MS68 specimens such as the current offering, however, are a genuine rarity.

Glowing luster radiates from the immaculately preserved surfaces, and a decisive strike delivers virtually complete delineation to the design features. Variegated mint-green and apricot-gold color adorns both sides. These attributes add up to outstanding eye appeal. Copper stains, common place for the year (Jeff Garrett and Ron Guth, 2006), are completely absent. Census: 6 in 68, 0 finer (5/09). (#7857)

PROOF LIBERTY QUARTER EAGLES

Scarce PR62 1885 Quarter Eagle

- 1340 1885 PR62 PCGS. CAC.** The tiny mintage of 87 pieces combines with the scarcity of 1885 business strikes to make this an elusive proof issue, according to Jeff Garrett and Ron Guth, authors of the *Encyclopedia of U.S. Gold Coins*. This specimen has the expected striking sharpness of a proof, including broad rims and crisp definition in the centers. A few minor contact marks and hairlines prevent a higher grade. (#7911)

Gorgeous 1898 Quarter Eagle, PR64 Deep Cameo

- 1341 1898 PR64 Deep Cameo PCGS. CAC.** This is an extraordinarily attractive proof quarter eagle, with richly frosted devices that shine over dark, watery, immensely reflective fields. Such blatant field-to-device contrast is unusual in a 19th century specimen of any type, and seems more consistent with the Deep Cameo surfaces seen on modern proof coins. Crisply struck throughout, with a small amount of sunset-orange toning near the obverse borders, and a few wispy hairlines that prevent an even finer grade assessment. Population: 3 in 64 Deep Cameo, 9 finer (6/09). (#97924)
- 1342 1903 PR55 PCGS. CAC.** Though this yellow-gold piece shows rub on the high points and slight hairline-clouding in the fields, its sharp strike and the gleaming mirrors remaining at the margins leave no doubt as to this piece's proof status. Two small contact marks are noted above the eagle's right (facing) wing. (#7929)

Desirable PR61 1904 Quarter Eagle

- 1343 1904 PR61 PCGS.** The 20th century Liberty quarter eagles offer the best entry-level issues for the novice proof gold collector, and this PR61 specimen is not without its charms. Though a number of hairlines and contact marks are scattered through the fields, its bold strike and irrepressible lemon-gold luster grant it considerable eye appeal. (#7930)

INDIAN QUARTER EAGLES

Popular Gem 1908 Two and a Half

- 1344 1908 MS65 NGC.** A satiny orange-gold Gem that exhibits a pleasing strike and has uncommonly unabraded surfaces. The first-year Indian quarter eagle issue was set aside in some quantity, but high-quality pieces such as the present coin are always subject to formidable demand. (#7939)

Near-Gem 1909 Quarter Eagle

- 1345 1909 MS64 NGC. CAC.** Remarkable peach and green-gold patina enriches this intricately struck and lustrous Choice gold type coin. The patient collector will eventually find a 1909 with the unblemished surfaces of the present piece, but it will be an arduous task to locate another with such rich original toning. (#7940)
- 1346 1909 MS64 NGC.** A well-struck specimen with just a touch of softness near the eagle's breast and on the Indian's headdress. The yellow-gold surfaces exhibit plenty of luster and have excellent eye appeal. (#7940)
- 1347 1911 MS64 NGC.** A fine near-Gem example of this early Indian quarter eagle issue from the Philadelphia Mint. This piece definitely seems high-end for the grade, with shimmering mint frost and a minimal number of surface blemishes. (#7942)
- 1348 1911 MS64 PCGS.** Rich yellow and sun-gold color abounds on this shining near-Gem. Well struck overall with only a small graze below the T in LIBERTY precluding a finer designation. (#7942)
- 1349 1911 MS64 NGC.** Frosty luster highlights the apricot-gold patina that covers both sides. The centers are a trifle weak, as often seen, but the rest of the details are boldly defined. This piece would make an attractive, yet relatively affordable type coin. (#7942)

Impressive 1911 Quarter Eagle, MS65

- 1350 1911 MS65 NGC.** The 1911 quarter eagle is often seen with weakly defined details, but the present piece exhibits a surprisingly sharp strike that produces only slight softness on the tips of the Indian's headdress. Bright butter-yellow patina drapes the minimally marked surfaces. NGC has certified just six examples finer (6/09). (#7942)

AU Details Key Date 1911-D Two and a Half

- 1351 1911-D—Improperly Cleaned—NCS. AU Details.** This key date Indian quarter eagle is somewhat glossy from cleaning, but the major design details are present. The mintmark is low relief, but its outline is complete, and its central opening is obvious. An affordable opportunity to complete an otherwise finished series. (#7943)

1911-D Indian Quarter Head Eagle, AU50

- 1352 1911-D AU50 NGC.** The satiny, mattelike surfaces exhibit even wear and only a handful of inconsequential marks. A pleasing combination of lilac and reddish-gold coloration adorns both sides. A fine example of this key date issue for the grade, and one that should appeal to a wide variety of collectors. (#7943)

Popular Near-Mint 1911-D Quarter Eagle

- 1353 1911-D AU58 PCGS.** A briefly circulated representative of this famous key-date Indian quarter eagle issue, strongly yellow-gold in the centers and fading to wheat-gold at the peripheries. Minimally abraded with a strong strike. This AU58 example would fit well in an otherwise Mint State set. (#7943)

Coveted MS62 1911-D Quarter Eagle

- 1354 1911-D MS62 NGC.** Garrett and Guth offer warm praise for this famous Indian quarter eagle issue in their *Encyclopedia of U.S. Gold Coins*, noting that "it boasts not only the lowest mintage (by far), but few examples were saved at the time of issue." This pleasingly lustrous, moderately abraded representative is largely canary-yellow with glimpses of peripheral sun-gold. (#7943)

Gem 1913 Two and a Half

- 1355 1913 MS65 PCGS.** Rich orange toning invigorates this lustrous and boldly impressed Gem. Careful examination is required to locate even trivial marks. Significantly scarcer at the MS65 level than several Philadelphia dates with lower mintages, such as the 1926. Population: 86 in 65, 5 finer (5/09). (#7945)

- 1356 1914 MS62 PCGS.** Honey-gold, greenish-tan, and sky-blue patina covers both sides of this well struck quarter eagle, each of which displays subdued luster. Small handling marks are visible in the raised exposed fields. (#7946)

Bold Near-Gem 1914 Quarter Eagle

1357 1914 MS64 PCGS. CAC. The low mintage 1914 Indian quarter eagle is less coveted than the key date 1911-D, yet at the MS64 level, the 1914 is rarer. Fewer examples have been certified by both NGC and PCGS. The present boldly struck near-Gem has rich apricot toning and only a few inconsequential field marks. (#7946)

1358 1914-D MS63 NGC. Lustrous apricot-gold surfaces are imbued with traces of mint-green and an impressive strike leaves sharp definition on the design elements. Wispy marks in the reverse fields limit the grade. (#7947)

Sharply Struck 1914-D Quarter Eagle, MS64

1359 1914-D MS64 NGC. The 1914-D quarter eagle from a mintage of 448,000 pieces is relatively easy to obtain in the lower Mint State grades through MS63 but is a major rarity in Gem condition. Near-Gems such as the present offering can be located with patience and searching. The design elements, including the mintmark, are sharply impressed. Yellow-gold surfaces display soft luster and reveal a few minute marks. (#7947)

Elegant Near-Gem 1914-D Quarter Eagle

1360 1914-D MS64 PCGS. Bright yellow-gold centers yield to deeper orange shadings at the rims. This near-Gem is strongly impressed with a pleasing obverse, though the reverse fields exhibit a number of abrasions that combine to preclude Gem status. PCGS has certified just 38 finer examples (6/09). (#7947)

Appealing Near-Gem 1914-D Quarter Eagle

1361 1914-D MS64 NGC. Ex: Seminole Collection. Sharply struck and satiny with straw-gold and olive toning. Only minimally abraded and impractical to obtain any finer, since *Coin World's Coin Values* prices an MS65 at \$40,000. Although available in circulated grades, the 1914-D emerges as a better date in Mint State. (#7947)

1362 1915 MS64 NGC. Bright yellow-gold luster with a touch of orange. This is a pleasingly detailed near-Gem with only a few fine abrasions scattered in the fields. (#7948)

1363 1915 MS64 NGC. Rich sun-gold color with glimpses of rose and wheat near the margins. This lustrous near-Gem is well struck with excellent overall eye appeal. (#7948)

1364 1915 MS64 PCGS. Housed in an older green label holder, this near-Gem is fully lustrous with hints of pink over the yellow-gold surfaces. Both sides are frosty and well struck. (#7948)

1365 1915 MS64 NGC. A shimmering and nearly fully struck near-Gem with predominantly caramel-gold color. Marks of any consequence are impossible to find. Costly any finer. (#7948)

1366 1915 MS64 NGC. An unmarked, crisply struck, and satiny Choice Indian type coin. Although quarter eagles had been every year at Philadelphia since 1829, mintage of the denomination at the "mother" mint ceased after 1915 until 1926. (#7948)

Fantastic Gem 1925-D Quarter Eagle

1367 1925-D MS65 NGC. A fantastic and frosty lemon-gold Gem survivor of this final D-mint quarter eagle issue, impressively detailed with gorgeous luster. Only a few small marks are present, the most visible a tiny abrasion just to the left of the portrait. NGC has graded 40 numerically finer pieces (5/09). (#7949)

Gem 1925-D Indian Head Quarter Eagle

- 1368 1925-D MS65 NGC.** A satiny Gem with delicate honey-gold toning and well preserved surfaces that are not quite pristine. A faint, partial inner rim is detected on the obverse, and a partial wire rim is seen on the lower left reverse between 6 and 9 o'clock, increasing the interest level of the piece. The 1925-D was the first Indian quarter eagle issue since 1915. (#7949)
- 1369 1927 MS64 PCGS.** Extremely attractive variegated apricot and mint-green patination greet the observer of this near-Gem. The pleasing eye appeal is bolstered by strong luster and sharply struck devices. Minor marks, mostly in the upper reverse field, preclude Gem status. Housed in a green label holder. (#7951)
- 1370 1927 MS64 NGC.** This gently shimmering Choice gold type coin has consistent straw-gold color and an absence of memorable marks. The strike is above average, and the eye appeal is attractive. (#7951)
- 1371 1929 MS64 PCGS.** A luminous straw-gold near-Gem from the final date of this popular series. A sharp strike overall with only minor inexactness on the lower reaches of the headdress. Housed in a green label holder. (#7953)
- 1372 1929 MS64 NGC.** An appealing near-Gem with a variegated mixture of straw-gold and rose toning and unbroken satiny luster. A small number of wispy marks limit the grade. (#7953)
- 1373 1929 MS64 NGC.** The final year of issue for the quarter eagles, this Choice Mint State piece is fully brilliant with exceptional light yellow luster and sharply defined motifs. (#7953)
- 1374 1929 MS64 NGC.** A gorgeous blend of yellow, orange, and green-gold heightens the eye appeal of this important near-Gem Indian quarter eagle. (#7953)

Bela Lyon Pratt

THREE DOLLAR GOLD PIECES

Delightful MS61 1854 Three Dollar

- 1375 1854 MS61 PCGS.** An unworn representative of the first and highest-mintage Philadelphia three dollar gold issue, immensely lustrous with a range of yellow shades. Though a number of pinpoint marks are present in the fields, the overall eye appeal is better than the grade might suggest. Housed in a green label holder. (#7969)

Well Struck 1854 Three Dollar, MS61

- 1376 1854 MS61 NGC.** The 1854 is one of the most available three dollar gold pieces in Mint State as many were likely saved as curiosities when they were first released. The yellow-gold surfaces of this specimen are lightly tinted with mint-green and display occasional whispers of apricot. The design elements are well impressed, as are most examples of this date. Minute handling marks are visible under magnification, especially on the obverse. (#7969)

Attractive 1854 Three Dollar, MS62

- 1377 1854 MS62 PCGS.** This minimally abraded piece is deep yellow-gold aside from a wisp of steel-gray on the cheek. Luster covers the designs, and the overall eye appeal is superior. The first-year 1854 issue is highly collectible as it also is a single-year type, since DOLLARS is larger on subsequent dates. (#7969)

Near-Gem 1854 Three Dollar Gold

- 1378 1854 MS64 PCGS.** The eye appeal of this supremely lustrous near-Gem example seems nearly unmatched, for the issue. The coin is so luminous and brilliant that it appears to have been freshly minted within the past few days or weeks. Boldly struck with honey-gold surfaces that reveal only minimal marks on either side. An impressive, high-end example of this popular three dollar date. (#7969)

Charming 1854-O Three Dollar, AU53

- 1379 1854-O AU53 PCGS.** The New Orleans Mint issued three dollar gold pieces only in 1854, which was also the first year of this odd denomination. Eye-catching luster in the periphery accents the yellow-orange patina that covers both sides. The strike is soft, as typical for the issue, but there are no marks of any significance. Population: 48 in 53, 54 finer (6/09). (#7971)
- 1380 1855 XF45 ICG.** A satiny, faintly abraded example with slightly muted luster. The khaki-gold surfaces show a few minor nicks and a pair of shallow planchet flaws near UN and T in UNITED. (#7972)
- 1381 1856-S AU50 PCGS.** An attractive AU example for the grade. Satiny with a moderate amount of high point wear and even khaki-gold color. A light pinscratch extends from the bridge of Liberty's nose to a point between E and D of UNITED. (#7975)
- 1382 1859 XF45 PCGS.** Noticeable traces of luster remain in the fields of this apricot-gold specimen. A small planchet defect is noted on the right side of the obverse, but there are no noteworthy marks otherwise. Prominent clash marks are visible on the reverse, which indicates that this is a later die state example. A mere 15,558 pieces were minted. (#7979)

Impressive MS62 1859 Three Dollar

- 1383 1859 MS62 PCGS.** Soft but swirling luster enlivens the dusky peach-gold and butter-yellow shadings of this unworn three dollar gold piece. Wispy abrasions are scattered on each side, yet the eye appeal is stronger than expected for the grade. Out of a mintage of 15,558 business strikes, PCGS has graded only 40 coins finer (5/09). (#7979)

- 1384 1864 XF45 NGC.** The yellow-gold surfaces of this Choice XF three dollar retain luster in the recessed areas of the well defined devices. An expected number of small marks are present. (#7985)

Challenging 1866 Three Dollar MS61

- 1385 1866 MS61 NGC.** A scarce Uncirculated survivor from the original mintage of only 4,000 coins. Pumpkin-orange and straw-gold shades compete for territory both sides. Marks are limited to a few thin abrasions in the fields. Although later dates were set aside in number by Philadelphia-area dealers, the 1866 was little saved, with only two pieces reported by NGC in grades above MS63. Census: 23 in 61, 16 finer (6/09). (#7987)

Attractive 1868 Near-Gem Three Dollar

- 1386 1868 MS64 NGC.** The 1868 has one of the highest survival rates of the three dollar series despite its relatively low mintage of 4,850 business strikes. Even examples through MS63 can be located with little trouble. A melange of peach, yellow-green, lavender, and mint-green bathes both sides of this near-Gem specimen, and the strike is sharp throughout. A few small marks, including one in the lower left reverse field, preclude Gem status. Census: 7 in 64, 3 finer (5/09). (#7989)

Stunning 1870 Three, MS62

- 1387 1870 MS62 PCGS.** Ex: Eliasberg. A stunning Mint State piece with fully mirrored fields and boldly defined devices. Both sides have delightful straw-gold color with wisps of pale blue toning. An important date in the series, from a mintage of only 3,500 coins, and seldom found any nicer. This piece was graded AU55 in the Eliasberg catalog. Population: 13 in 62, 7 finer (5/09). (#7991)

Amazing 1870 Three Dollar Gold, MS64
Tied for Finest-Certified

- 1388 1870 MS64 NGC.** For a number of years after the Civil War, gold and silver coins were rarely seen in commerce. Instead, they were hoarded by those people who could afford to do so. As a result, the Philadelphia Mint produced small amounts of coins at the time, seeing little reason to produce coinage that would also be hoarded. As a symptom of this ongoing situation, the mintage of the 1870 three dollar gold issue was a mere 3,500 pieces.

This amazing example is tied for the finest that NGC or PCGS has ever certified. It is fully lustrous and satiny with brilliant orange-gold surfaces and faint pink highlights. Few grade-limiting surface marks are evident on either side. Census: 3 in 64, 0 finer at either service (6/09). (#7991)

Lovely Mint State 1871 Three Dollar

- 1389 1871 MS61 NGC.** This sharply struck representative displays ample mint flash, and the absence of visible marks ensures the eye appeal. Predominantly honey-gold with a dash of ice-blue on the highpoints of the portrait. A meager 1,300 pieces were struck. Census: 14 in 61, 21 finer (6/09). (#7993)

Low Mintage Choice AU 1872 Three Dollar

- 1390 1872 AU55 PCGS. CAC.** Luminous luster fills the legends and outlines the portrait and wreath. Both sides are devoid of relevant abrasions. A tiny mintage of 2,000 pieces ensures that the 1872 will always be much scarcer than such successor dates as the 1874 and 1878. Population: 21 in 55, 66 finer (5/09). (#7994)

Crisply Struck 1874 Three Dollar, MS63

- 1391 1874 MS63 NGC.** Crisply struck aside from the top of the plumes and the knot of the bow. A lustrous Select gold type coin with undisturbed fields and a few tiny ticks on Liberty's jaw. A few faint roller marks (as made) are noted within the headdress. As on all three dollar pieces, the spacing in LIBERTY is uneven, with IB and ER much more distant than RTY. (#7998)

Exquisite Near-Gem 1874 Three Dollar

- 1392 1874 MS64 NGC. CAC.** Precisely struck and lustrous with attractive pumpkin-orange and green-gold patina. Marks are few and inconsequential, and the strike is sharp despite minor softness on the knot of the wreath ribbon. Scarcer at the MS64 level than the much lower mintage 1888. Census: 86 in 64, 13 finer (5/09). (#7998)

Handsome Choice 1874 Three Dollar

- 1393 1874 MS64 PCGS.** With strong, swirling luster and an excellent strike on the fine details of Liberty's hair, this orange-kissed yellow-gold survivor offers pleasing eye appeal. Only a few tiny marks in the fields preclude Gem status. This type issue is a rarity any finer; PCGS has certified just 12 higher-grade examples (6/09). (#7998)

Charming AU55 1877 Three Dollar

- 1394 1877 AU55 PCGS. CAC.** After two years of proof-only production, the three dollar gold piece resumed business strike output in 1877, but only 1,468 pieces were coined. This lightly worn survivor retains considerable lemon-gold luster, particularly at the reflective margins. Abrasions are noted below and to the right of the tips of Liberty's hair. Population: 11 in 55, 18 finer (5/09). (#7999)

- 1395 1878 XF40 PCGS.** An original canary-gold example that still has traces of debris from circulation within design crevices. The devices display noticeable wear, but luster glimmers from LIBERTY and other protected areas. (#8000)
- 1396 1878 AU58 NGC.** A minimally abraded piece with charming light yellow patina. Eye-catching satiny luster gives this barely circulated specimen impressive eye appeal. The obverse shows minor softness, but the reverse is well-defined. (#8000)
- 1397 1878 MS60 NGC.** Yellow-gold surfaces display traces of reddish-gold in the recesses of this three dollar piece, and reveal scattered contact marks and grazes. Well defined save for the usual weakness in the wreath knot. (#8000)

Inviting MS63 1878 Three Dollar

- 1398 1878 MS63 PCGS.** A Select example of this popular three dollar gold type issue that offers strong eye appeal in all respects. Rich yellow-gold surfaces have powerful, swirling luster, and the strike is pleasing. The flaws that account for the grade are wispy marks rather than distracting abrasions. (#8000)

Lustrous Gem 1878 Three Dollar

- 1399 1878 MS65 PCGS.** A lustrous peach-gold Gem. The reverse is impressively bereft of marks, and the obverse has only minimal contact. By the standards of the denomination, the 1878 is available, but it must be remembered that all three dollar pieces are scarce, particularly as a Gem. In 1878, San Francisco struck more than 1.7 million double eagles, a production more than three times the total combined mintage of the three dollar denomination.
- As is often seen on 1878 three dollar pieces, the reverse is die-doubled, noticeable on the right edges of the ARS in DOLLARS and along the upper right border of the cotton leaves near 1:30. The 8s in the date also show light repunching. (#8000)

Remarkable Superb Gem 1878 Three Dollar Gold

1400 1878 MS67 NGC. The mintage of the 1878 three dollar gold piece is, at least in part, related to the Specie Resumption Act of January 1875. This Congressional act provided, among other things:

1. That the U.S. Treasury be prepared to resume the redemption of legal tender notes in specie (gold) as of January 1, 1879; and
2. That gradual steps be taken to reduce the number of greenbacks in circulation (millions of greenbacks were issued during the Civil War, and maintained their value only through trust in the government).

David Bowers and Douglas Winter, in their book *The United States \$3 Gold Pieces, 1854-1889*, write:

"To provide for this, in 1878, as the time approached, it was only logical to build up a stock of such pieces, including smaller denominations for public convenience. Following this logic, the mintage of \$3 coins reached 82,304 pieces (circulation strikes), the highest total since the denomination was instituted in 1854."

Today, the 1878 is the post plentiful of all dates in Mint State. Indeed, NGC and PCGS have certified approximately 6,000 examples in Uncirculated grades! The population begins to fall off in MS65 and MS66, and only 22 coins reach the lofty grade level of MS67.

This Superb Gem displays a delicate blend of yellow-gold, mint-green, apricot, and lilac patina covering surfaces that are awash in dazzling luster. While the typical 1878 is lightly struck (Bowers and Winter, p. 142), an exacting strike leaves crisp definition on the design features, including the hair, bonnet, and lower wreath; areas that are usually weak. Impeccable preservation complements these attributes, engendering captivating eye appeal. Census: 16 in 67, 0 finer (6/09). (#8000)

Scarce Uncirculated 1879 Three Dollar

- 1401 1879 MS61 NGC.** A boldly defined example of a low mintage date. Study beneath a loupe and a strong light fails to locate any detrimental abrasions. The grade is determined by the luster extent, prominent throughout the wreath, legends, and portrait. Many gold collectors take one look at the mintages of three dollar pieces and assume that the series is uncollectible. Proof-only issues and the unique 1870-S are out of reach for those of average means, but most numismatists can complete long date runs of the series with patience and effort. (#8001)

Challenging 1879 Three Dollar MS63

- 1402 1879 MS63 PCGS. CAC.** This Select Mint State sun-gold representative offers dazzling luster and an exacting strike. Infrequent minor field marks are all that preclude an even higher grade. A mere 3,000 business impressions were coined, a fraction of the prior year's three dollar emission. (#8001)

Flashy Near-Gem 1879 Three Dollar Gold

- 1403 1879 MS64 PCGS.** Light yellow-gold color overall with potent, swirling luster. The boldly impressed central devices are pleasingly preserved for the grade. After the last high-mintage issue of three dollar gold pieces the previous year, production for 1879 fell to a token 3,000 business strikes. (#8001)

Choice Prooflike 1879 Three Dollar

- 1404 1879 MS64 Prooflike NGC.** Reflective fields and lustrous, well struck devices combine to display outstanding eye appeal. Minor thin contact on the cheek barely merits mention. Only 3,000 pieces were struck, quite a reduction from the 82,304 pieces produced the prior year. Census: 10 in 64 Prooflike, 1 finer (6/09). (#78001)

Reflective Uncirculated 1882 Three Dollar

- 1405 1882 MS61 PCGS.** A prooflike example of this ultra-low mintage (1,500 pieces) three dollar date. Diagnostic for commercial strikes, the 2 in the date is widely repunched north. A precise strike aside from minor bluntness on Liberty's eyebrow. Both sides are refreshingly unabraded, and given the strong command from collectors of this popular set, the present lot should witness spirited bidding. (#8004)

Alluring 1882 Three Dollar Gold, MS61

- 1406 1882 MS61 ANACS.** The defective or repunched 2 in the date readily identifies this piece as a business strike, since the proofs of this date do not possess that feature. Garrett and Guth remark upon the surprisingly high number of AU and Uncirculated survivors from this date, considering its scant mintage of only 1,500 coins. This MS61 example displays abundant mint luster and radiant yellow-gold surfaces. A couple of minor marks are noted on the reverse, where a reddish-brown alloy spot is also observed, directly beneath the 1 in the date. (#8004)

Pleasing Mint State 1883 Three Dollar

- 1407 1883 MS61 PCGS.** Meager mintages abound in the three dollar series, but the 1883 emission is especially low. Only 900 business strikes were coined, in addition to the separately collected 160 proofs. This orange-gold example has a pleasing strike and lacks the untoward marks often encountered with the MS61 grade. (#8005)

Lower Mintage 1887 Three Dollar MS62

- 1408 1887 MS62 PCGS.** The Philadelphia Mint concentrated on silver dollar production in 1887. No business strike half eagles or double eagles were issued, and the other gold denominations had only token mintages. Just 6,000 three dollar pieces were struck, of which perhaps 200 examples survive in Mint State. This sun-gold example has good luster and a precise strike. The obverse is nicely die doubled, visible on much of LIBERTY and AMERICA. (#8009)

Coveted Gem 1888 Three Dollar Piece

- 1409 1888 MS65 NGC.** The business strike production of the 1888 is an enticingly low 5,000 pieces. Examples were duly set aside by well-connected Philadelphia dealers, but most survivors show friction or abrasions and cannot compare to the eye appeal of the present sun-gold Gem. It is boldly struck, and contact is inconsequential. A strong loupe reveals only faint marks near Liberty's shoulder curl. With the exception of proofs, all 1888 three dollar pieces exhibit obverse die doubling, most apparent atop the letters in UNITED. Census: 39 in 65, 16 finer (5/09). (#8010)
-

Glowing 1888 Three Dollar, MS66

- 1410 1888 MS66 PCGS. CAC.** Despite a mintage of 5,000 circulation strikes, the 1888 three dollar gold piece is relatively easy to locate in Mint State right through the near-Gem level of preservation. David Bowers (2005) suggests that this is “probably reflective of fewer being melted at the Mint.” Gems, on the other hand, are scarcer, and anything finer is elusive.

Glowing luster emanates from both sides of this Premium Gem, and each is endowed with rich apricot-gold and mint-green patination. A decisive strike results in sharp definition on the design elements. Coupled with these attributes are impeccably preserved surfaces that reveal just a few trivial marks. The CAC label aptly recognizes the technical quality and aesthetic appeal of this lovely piece. Population: 30 in 66, 2 finer (5/09). (#8010)

Lovely 1889 Three Dollar, MS62

- 1411 1889 MS62 NGC.** The three dollar denomination was unnecessary in commerce and failed to circulate during its last several years. Mintages were small but survival rates were higher, meaning that the typical survivor is apt to be a higher grade. This lovely example has frosty yellow-gold surfaces with few imperfections on either side, other than typical grade-consistent abrasions. A delightful representative from the final year of the denomination. (#8011)
-

Gleaming MS62 1889 Three Dollar

- 1412 1889 MS62 NGC.** Gleaming yellow-gold surfaces show occasional lemon accents. The strike is generally pleasing, though a number of wispy abrasions are noted in the fields. High eye appeal for the grade. The 1889 has long enjoyed popularity as the last of the three dollar gold pieces, aided by a business strike mintage of only 2,300 coins. (#8011)
-

PROOF THREE DOLLAR GOLD PIECE

Gorgeous Gem Proof 1860 Three Dollar Gold

1413 1860 PR65 NGC. Ostensibly, 119 proof three dollar gold pieces were delivered by the coiner on April 5, 1860. However, the issue's appearances on the market are extremely infrequent. Numismatists believe most of those proofs went unsold and were melted at the Mint. Walter Breen speculated that many specimens were later spent or carried as pocket pieces until they became indistinguishable from business strikes. In *The United States \$3 Gold Pieces 1854-1889*, Q. David Bowers reports, "Although Mint records state that 119 Proofs were struck, it is likely that no more than 20 were actually distributed. For decades the 1860 has been viewed as a first-class rarity among Proofs in the \$3 series." Bowers goes on to estimate a surviving population of 10-12 examples.

Harry Bass noticed that proofs of this date were struck from the same dies as circulation strikes. The dies were simply repolished to produce a mirror finish. This process (called lapping) resulted in some loss of detail in certain areas. Longacre's initials, on the truncation of the neck, were nearly eradicated by the lapping, and the spacing of the obverse dentils was also disrupted.

The present coin is a small masterpiece. Despite the aforementioned lapping, this coin features a sharp strike. Exquisite detail is present in the hair and feathers on the obverse, and in the wreath on the reverse. The fields are fully reflective, and complement the crisply delineated devices to produce fantastic eye appeal. This specimen is tied with two other pieces, one at PCGS and another at NGC, for the honor of finest certified (6/09). (#8023)

PROOF FOUR DOLLAR GOLD PIECES

Exquisite 1879 Flowing Hair Gold Stella
Judd-1635, PR64 Cameo

1414 1879 Flowing Hair, Judd-1635, Pollock-1833, R.3, PR64 Cameo PCGS. CAC. The 1879 Flowing Hair stellars were distributed in three-piece sets to Congressmen along with examples of the Judd-1617 and Judd-1626, two different goloid metric silver dollar designs. According to numismatic legend, about 25 “original” stellars were struck for distribution, and they proved so popular that more sets were restruck in 1880. The most commonly seen figure for the restrikes is 400, but some estimates are higher, making the 1879 Flowing Hair by far the most available of the four varieties: a simple 2x2 matrix, with 1879 and 1880 on one side, and Flowing Hair and Coiled Hair on the other.

Both the stellars and their counterparts in the three-piece sets, the goloid and goloid metric dollars, were the result of the increasing influence of Western silver mining interests and their cohorts, a cabal of Eastern politicians who were trying to increase domestic and international circulation of the precious metal via the guise of sans-borders metric and international currency concepts. According to the vision, gold or silver coinage with an “even” metric weight and purity—hence eliminating the need for assay testing—would obviate the need for individual country-states to issue their own precious metal coinage, a concept that would begin to be realized more than a century later with the introduction of the euro, the first truly international currency.

In the case of the stella, although it appears to be a standard-alloy gold coin, its purported “metric” alloy was composed of a “lot of gold with a little bit of silver,” the whole alloyed with copper.

Therein lay a major flaw.

Both the goloid metric silver dollars, which purportedly contained a “lot of silver with a little bit of gold [about 4%],” and the stellars were indistinguishable from their standard-coinage-alloy counterparts. That is, they would have been indistinguishable, even if they had been *actually struck* in those unusual alloys. The small amounts of added silver or gold were insufficient for visual detection, an instant invitation for forgers to manufacture lower-value imitations of the real McCoy.

We say “would have been indistinguishable” because we firmly believe that no 1879 Flowing Hair gold stellars were ever made as “originals” in that metric alloy. Rather, they were struck on regular .900 fine gold planchets rolled out to 80% of the thickness of a half eagle, accounting for the striations seen on all known examples of the 1879 Flowing Hair stella.

Another, more fundamental flaw lay in their reliance on intrinsic value to equal a number of international currencies. Like any bullion coin, its intrinsic value as measured in Austrian florins, French francs, or Dutch guilder fluctuated over time, and in this way it had no ready advantage over the more-familiar U.S. gold eagles and half eagles.

Regardless of the original intent or misconceptions behind the creation of the stellars, today they are among the United States’ most desired and reverse numismatic treasures. While the 1879 Coiled Hair and both 1880 versions are seldom offered and fabulously expensive, the 1879 Flowing Hair is available for a price, and always in demand.

This piece shows glorious, rich golden-yellow color and bold eye appeal. The striations are visible through Liberty’s cheek and brow on the obverse, and on the high points of the star on the reverse, particularly the lower segment where the strike through CEN(TS) is somewhat soft. Otherwise, there are few signs of contact or other distractions. A wonderful acquisition to finish off that gold type set. Population: 18 in 64 Cameo, 20 finer (6/09). (#88057)

Enchanting 1879 Flowing Hair Gold Stella
Judd-1635, Gem Cameo Proof

1415 1879 Flowing Hair, Judd-1635, Pollock-1833, R.3, PR65 Cameo NGC. The 1879 four dollar stella is the most popular gold pattern of all time. It is properly considered a pattern, but conventional gold collectors have adopted the issue as well. The stella is pursued passionately by collectors from many different disciplines and backgrounds. An example is considered a highlight of any collection that features one.

The stella was originally intended to function as a medium of international exchange, much as the euro does today. The Honorable John A. Kasson conceived of the coin as a handy denomination, nearly equivalent to the Austrian eight florin, French twenty franc, Italian twenty lire, Spanish twenty peseta, and Dutch eight florin coins. Having traveled extensively in Europe in political assignments as an envoy and minister plenipotentiary, Kasson understood the financial difficulties faced by international travelers in his day. Banks charged a significant premium to exchange one currency for another. Repeatedly changing money as one journeyed from country to country would result in substantial loss through the repeated fees. Money-changers would usually refuse to exchange minor coins, causing further drain on the traveler's funds. Kasson hoped to facilitate travel overseas and foreign trade by developing a coin that could be used in many countries without the expense and inconvenience of monetary exchange. Kasson had impressive credentials as a former chairman of the Committee of Coinage, Weights and Measures in Congress. Using his political connections, the former chairman convinced the sitting Committee of Coinage, Weights and Measures to consider his project. The result was the stella.

Engravers Charles Barber and George Morgan both developed a pattern four dollar gold coin in 1879. Barber produced the Flowing Hair obverse design, which was similar to a half eagle pattern design from 1878, Judd-1574. Morgan created an elegant design known as the Coiled Hair stella, with Liberty's hair gathered up in braids atop her head. The designs used a common reverse, with a five-pointed star as the central element, from which the pattern takes its name. It is believed that 15 Flowing Hair stellas were coined in 1879, but demand from Congressmen and Mint officials caused the issue to be restruck in 1880. The restrikes were from the original dies and may have numbered as many as 600-700 examples. All examples seen in modern times have parallel striations across the obverse design, usually in the hair, and it is impossible to differentiate between restrikes and originals. Morgan's Coiled Hair design was produced in extremely small quantities and was not given out to Congressmen for examination. The design was not restruck and remains very rare today. Experts believe that 400-500 specimens of the Flowing Hair stella have survived. Both Flowing Hair and Coiled Hair varieties were later reproduced in small numbers, with new dies dated 1880, to satisfy numismatic demand from favored collectors.

Kasson's idea was ahead of its time, but it was fatally flawed. The different currencies that he sought to exchange with the stella were not exact equivalents and varied against each other over time. Congress realized that the stella was impractical, and no regular mintage was ever authorized. Many stellas are worn, and popular stories relate that members of Congress used the coins they obtained as exotic gifts for their mistresses.

As a result of their colorful history, many stellas are seen in impaired condition today. Gem Cameo examples are rare and desirable. The present example is a fine representative of this much-loved design. The deeply mirrored fields contrast boldly with the frosty devices to produce a dramatic cameo effect. The strike is strong, and all design elements are brought up in great detail. The lovely green-gold color accents the virtually flawless surfaces. A classic rarity that will appeal to the pattern specialist and the mainstream collector. Census: 14 in 65 Cameo, 29 finer (5/09). (#88057)

EARLY HALF EAGLES

AU58 1798 Heraldic Reverse Small 8 Half Eagle, BD-6

- 1416** 1798 Large Eagle, Small 8 AU58 NGC. Breen-6430, BD-6, R.6. The Bass-Dannreuther reference on *Early U.S. Gold Coin Varieties* refers to this variety as a Large Eagle, Normal 8, and goes on to explain: "It is not small, but the correct punch size—it matches the other digits of the year." This example is boldly struck, if typically soft over the center of the reverse, with shimmering, semiprooflike fields and rich lime-green toning. Several heavy vertical adjustment marks are noted across Liberty's portrait. Slightly worn with numerous wispy pinscratches and hairlines on each side. (#8079)

Desirable XF Details 1800 Half Eagle, BD-4

- 1417** 1800—Improperly Cleaned—NCS. XF Details. Breen-6439, BD-4, R.4. The reverse with blundered M of AMERICA. The dusky mustard-gold surfaces show scattered hairlines from a past cleaning, and there are tooling marks at 8 and 11 o'clock on the reverse periphery, with reengraving of the letters there. Still, a readily collectible example of this early half eagle issue. (#8082)

Lovely 1800 Half Eagle, BD-2, AU50

- 1418** 1800 AU50 ANACS. Breen-6438, BD-2, High R.3. Remarkably well struck for the date, with no mentionable weakness on any of the design elements, save for a few obverse stars. The somewhat bright surfaces display lovely, even green-gold toning across both sides. Lightly worn with scattered small marks.
From The Kiawah Collection. (#8082)

Desirable 1803/2 Five Dollar, BD-3, AU53

- 1419** 1803/2 AU53 PCGS. Breen-6441, BD-3, R.4. The most important die characteristics of this variety, for identification purposes, include the missing right foot of T in LIBERTY and a reverse star pointing to the eagle's lower beak. Well struck and surprisingly lustrous for the grade, this example displays rich coloration. Shallow vertical adjustment marks extend over Liberty's portrait, and faint hairlines are noted in the fields. A horizontal pinscratch crosses the eagle's breast. A desirable representative of this scarce early date, despite those limitations.
From The Kiawah Collection. (#8084)

Alluring 1804 Small 8 Half Eagle, BD-1, AU50

- 1420 1804 Small 8 AU50 PCGS.** Breen-6443, BD-1, High R.4. Long known as a "Small 8" variety, and still widely referred to as such, but Dannreuther (and Bass) refer to this variety as having a "Normal 8." The 1 in the date has a blunt top, and the 4 is small. This example shows alluring green-gold and peach toning. It is boldly struck overall, with weakness observed on the eagle's tail feathers and arrows. Only trivial marks and hairlines appear on each side. *From The Kiawah Collection.* (#8085)

**AU Sharpness 1806 Half Eagle
7x6 Stars, Round Top 6, BD-6**

- 1421 1806 Round Top 6, 7x6 Stars—Improperly Cleaned—NCS. AU Details.** Breen-6448, BD-6, R.2. A faintly hairlined but nonetheless attractive early gold type coin that has mustard-gold toning and splendid design definition. Luster dominates protected areas. The portrait exhibits minor parallel adjustment marks, as made. The strike is slightly soft on the eagle's shield. (#8089)

**Attractive Choice AU 1806 Five Dollar
Round Top 6, 7x6 Stars, BD-6**

- 1422 1806 Round Top 6, 7x6 Stars AU55 NGC. CAC.** Breen-6448, BD-6, R.2. This partly lustrous early half eagle has honey-gold toning and no obvious marks. The forehead and drapery show only slight wear. The eye appeal is pleasing for the grade, and this sharp example should readily find a place of honor within an advanced gold type set. (#8089)

**Flashy 1807 Bust Right
Half Eagle, BD-1, AU58**

- 1423 1807 Bust Right AU58 PCGS.** Breen-6449, BD-1, High R.4. The flag of 1 in the date is attached to Liberty's lowest hair curl. The reverse has small stars, a key diagnostic as this is the only confirmed Small Stars Reverse variety for the date (Dannreuther discusses a second, unconfirmed Small Stars Reverse die in *Early U.S. Gold Coin Varieties*). This is a high-end example for the grade, with considerable flash and only traces of high point wear on either side. *From The Kiawah Collection.* (#8092)

Choice XF 1808 Five Dollar, BD-4

- 1424 1808 XF45 NGC.** Breen-6457, BD-4, High R.3. The key diagnostics for this die marriage, one of four known for the year, are the wide spacing between 5 and D on the lower reverse and the lack of an 1808/7 overdate on the obverse. Dannreuther estimates that 15,000 to 30,000 examples of this pairing were struck, with perhaps 175 to 225 survivors. This is a pleasingly original representative with lime-gold toning and even, moderate wear across each side. The only noticeable surface distraction is a thin, shallow abrasion between obverse stars 2 and 3. *From The Kiawah Collection.* (#8102)

Bright 1809/8 Five Dollar, XF Details

- 1425 1809/8—Improperly Cleaned—NCS. XF Details.** Breen-6458, BD-1, High R.3. The 1809/8 five, though scarce in an absolute sense, is one of the most available Capped Bust Left gold varieties and is popular with type collectors. Though the lemon-gold surfaces of this lightly worn example are excessively bright with light hairlines, the coin retains considerable eye appeal. Small digs are present on the portrait, and an abrasion passes to the left of Liberty's mouth. *From The Kiawah Collection.* (#8104)

Attractive 1810 Large Date, Large 5
Half Eagle, BD-4, AU55

- 1426** 1810 Large Date, Large 5 AU55 PCGS. Breen-6459, BD-4, R.2. There are four known die marriages for this date, which had a high mintage of somewhere around 100,287 pieces (according to *Early U.S. Gold Coin Varieties*). This is one of the two Large Date varieties and the only Large Date, Large 5 variant. This attractive Choice AU representative displays rich coloration, modest wear, and only the usual wispy marks of a lightly circulated coin. From *The Kiawah Collection*. (#8108)

Mint State 1811 Tall 5 Half Eagle, BD-1

- 1427** 1811 Tall 5 MS61 NGC. Tall 5, Breen-6463, BD-1, High R.3. Incorrectly designated as a Small 5 variety by NGC. This well struck butter-gold early half eagle has vibrant luster throughout the legends, stars, and devices. A loupe reveals a few hair-thin marks, such as between the 81 in the date, but the eye appeal is pleasing for the MS61 level. (#8110)

Impressive MS61 1812 Half Eagle, BD-1

- 1428** 1812 MS61 NGC. Wide 5D, Breen-6466, BD-1, R.3. There are just two half eagle varieties for this date, and they are easy to distinguish by observing the degree of separation between 5 and D on the lower reverse (both were created using the same obverse die). This example is impressively preserved and highly lustrous, with bright yellow-gold color and flashy, semiprooflike fields. There are only a few scattered marks on each side of this attractive Mint State specimen. From *The Kiawah Collection*. (#8112)

Choice Narrow 5D 1812 Half Eagle, BD-2

- 1429** 1812 MS64 NGC. CAC. Narrow 5D, Breen-6465, BD-2, High R.4. Boldly struck and lustrous with only a few trivial surface imperfections. The green-gold toning is consistent throughout. Lightly clashed near LIBERTY and the base of the shield. Adjustment marks are minor and limited to the obverse dentils. The rarer of the two known die marriages of 1812 half eagles. Most are the Wide 5D variety, BD-1. The final date of John Reich's Capped Bust type, replaced by the similar but cleavage-less Capped Head design of 1820 to 1834. Census: 34 in 64, 9 finer (6/09). (#8112)

Appealing 1813 BD-1 Half Eagle, AU50

- 1430** 1813 AU50 PCGS. Breen-6467, BD-1, R.2. The key diagnostics for this variety include: the first S in STATES is over the right side of the E in the motto below; the D of the denomination leans left in relation to the 5; and the lowest arrow tip points to the center of the base of 1 in AMERICA. (This and the only other 1813 die marriage, designated as B-2, share the same obverse die.) The design elements are clearly and crisply struck. Plenty of luster remains for the grade. Minor high point wear and small marks are seen on each side of this visually pleasing example. Housed in an earlier green label PCGS holder. From *The Kiawah Collection*. (#8116)

Satiny MS62 1813 Half Eagle, BD-1
Popular First-Year Type Coin

- 1431 1813 MS62 NGC.** Breen-6467, BD-1, R.2. A smooth and evenly struck representative that possesses satin luster and an unabraded appearance. Adjustment marks (as made) are limited to the upper reverse dentils. An opportunity for the alert early gold specialist.

The Capped Head Left half eagle type, struck between 1813 and 1834, is likely the most challenging series in American numismatics. Several dates are noncollectible or nearly so, especially the 1821, 1822, 1825/4, 1828/7, and 1815. Gold type collectors have an easier task, thanks to the first-year 1813, which escaped the smelter to a greater degree than most later dates. Nonetheless, type demand is sufficiently strong that any 1813 that emerges seldom remains in inventory for long. (#8116)

Pleasing AU50 1823 Half Eagle, BD-1

- 1432 1823 AU50 NGC.** Breen-6481, BD-1, High R.4. The only known die marriage for the date. John Dannreuther (2006) estimates that there are 80 to 100 survivors. The design features are well brought up in most areas. The semireflective green-gold surfaces display pleasing coral color near the peripheries that is quite appealing. Few abrasions are noted, and none of them merit individual mention. An attractive example of this popular issue that is worthy of a high grade type collection. Census: 2 in 50, 19 finer (5/09). From *The Kiawah Collection*. (#8131)

CLASSIC HALF EAGLES

- 1433 1834 Plain 4 AU53 NGC.** First Head, Breen-6501, McCloskey 1-A, R.3. Well struck for the type, and wear is limited to friction on the eyebrow and curl high points. Clean, aside from a diagonal mark on the cheek. From *The Kiawah Collection*. (#8171)

- 1434 1834 Plain 4 AU53 NGC.** Second Head, Breen-6502, McCloskey 2-B, R.3. Well struck for the issue, though with typical softness at Liberty's temple. Bright yellow-gold surfaces show scattered abrasions. From *The Kiawah Collection*. (#8171)

- 1435 1834 Plain 4 AU55 PCGS.** Second Head, Breen-6502, McCloskey 2-A, R.2. Radiant straw-gold surfaces show rub on the softly struck high points. Scattered abrasions appear mostly in the fields. From *The Kiawah Collection*. (#8171)

- 1436 1834 Plain 4 AU55 NGC.** First Head, Breen-6501, McCloskey 3-B, R.2. Radiant yellow-gold surfaces with light, scattered abrasions. The obverse is softly struck with minor wear, but the reverse offers crisp detail. From *The Kiawah Collection*. (#8171)

- 1437 1834 Plain 4 AU58 NGC.** Second Head, Small Plain 4, Breen-6502, McCloskey 4-C, R.3. A scarcer variety identified by the Block 8 and Plain 4 in the date, the 4 nearly touching Liberty's lowest hair curl. This is an attractive greenish-gold example with nearly full luster and good eye appeal. From *The Kiawah Collection*. (#8171)

- 1438 1834 Crosslet 4 VF30 PCGS.** Second Head, Crosslet 4, Breen-6503, McCloskey 5-D, R.4. A midrange example of this very scarce variety, well struck with luminous gold-orange surfaces that show deeper colors close to the crevices of the devices. Light to moderate abrasions overall. From *The Kiawah Collection*. (#8172)

- 1439 1835 AU50 PCGS.** First Head, Breen-6504, McCloskey 1-A, R.2. Rich gold-orange color with small clusters of abrasions in the fields. Moderate remaining luster and above-average definition. From *The Kiawah Collection*. (#8173)

- 1440 1835 AU50 PCGS.** First Head, Breen-6504, McCloskey 1-B, R.3. Pockets of bright luster aid the eye appeal of this richly detailed example. The strike is crisp, and the hair curls exhibit only slight wear. There are no consequential marks. (#8173)

- 1441 1835 AU55 NGC.** First Head, Breen-6504, McCloskey 1-B, R.3. A sharply struck piece with ample bright luster seen across the borders and devices. There are numerous marks noted on both sides including a concentration of shallow scratches on Liberty's cheek. Die clash marks from the shield are noted near Liberty's ear.
From The Kiawah Collection. (#8173)
- 1442 1835 AU55 NGC.** Second Head, Breen-6505, McCloskey 3-D, R.3. An extremely lustrous and well-struck example with wonderful, warm honey-gold color. Breen's 1988 *Encyclopedia* records three different portraits of 1835 half eagles, but the differences are relatively minor. It is actually easier to attribute them by the reverse dies, since the legends continued to be entered by hand on each working die until 1839.
From The Kiawah Collection. (#8173)
- 1443 1836 AU53 NGC.** Third Head, Breen-6510, McCloskey 3-C, R.2. Original green-gold surfaces with few appreciable marks and even, light wear in the centers. A handful of wispy marks are noted in the fields, and the reverse periphery shows ample remaining luster.
From The Kiawah Collection. (#8174)
- 1444 1836 AU55 NGC.** Second Head, Large Date, Breen-6509, McCloskey 6-E, R.4. This die pairing, very scarce in an absolute sense, is represented here by a lustrous wheat-gold and lemon-yellow example. Faintly abraded on each side, though the well struck devices show only a touch of wear.
From The Kiawah Collection. (#8174)
- 1445 1836 AU55 NGC.** Second Head, Large Date, Breen-6509, McCloskey 4-C, R.3. Pale yellow-gold overall with subtle canary accents near the margins. Well-defined on the minimally marked reverse, though the stars and portrait show minor softness.
From The Kiawah Collection. (#8174)
- 1446 1836 AU55 NGC.** Second Head, Small Date, Breen-6508, McCloskey 5-D, R.3. Well struck on the reverse but with softness at the obverse margins and the portrait. Lustrous lemon-gold surfaces are lightly abraded, with a pinscratch between stars 5 and 6.
From The Kiawah Collection. (#8174)
- 1447 1836 AU55 NGC.** Second Head, Large Date, Breen-6509, McCloskey 4-D, R.2. Subtle orange accents visit the radiant fields of this well struck example. The portrait shows a small mark on the neck and minor high point wear, but it is pleasingly preserved otherwise.
From The Kiawah Collection. (#8174)
- 1448 1836 AU55 NGC.** Second Head, Large Date, Breen-6509, McCloskey 2-B, R.4. Well struck by the standards of the issue with lustrous pale yellow-gold surfaces. A touch of softness at the curls near Liberty's face, but pleasing overall.
From The Kiawah Collection. (#8174)
- 1449 1836 AU58 PCGS.** Second Head, Large Date, Breen-6509, McCloskey 2-A, R.4. Ex: Bass. Sun-gold color dominates on this flashy piece, though splashes of orange are visible near the rims. Well struck with light but distinct wear on the high points.
From The Kiawah Collection. (#8174)
- 1450 1837 AU50 PCGS.** Large Date, Large 5, Breen-6512, McCloskey 2-B, R.3. The most plentiful 1837 half eagle variety, yet still somewhat elusive in higher grades. This attractive lemon-yellow representative has considerable frosty luster.
From The Kiawah Collection. (#8175)
- 1451 1837 AU55 NGC.** Small Date, Breen-6513, McCloskey 3-C, R.4. Script 8. The orange-gold coloration is imbued with khaki-green accents in the fields and touches of peach near the peripheries. Minimal wear is noted on the high points, although a trace can be discerned just above Liberty's ear and the eagle's right (facing) wingtip. A few marks are noticeable on each side.
From The Kiawah Collection. (#8175)

- 1452 1837 AU55 NGC.** Large Date, Small 5, McCloskey 1-A, R.4. Deep green-gold surfaces with satiny luster and a trace of rub on the highest design points on each side, consistent with the grade. The obverse and reverse fields are moderately abraded, with only a few noticeable marks. The 1837 half eagle is scarcer than those dated 1834 to 1836.
From The Kiawah Collection. (#8175)
- 1453 1838 AU55 NGC.** Small Arrows, Large 5, Breen-6515, McCloskey 2-B, R.2. The arrowheads are compact compared to the 1-A die pair. This well defined Choice AU piece, yellow-gold with a hint of green, has wear only in small, isolated patches, with one such area appearing at Liberty's forehead. A pleasing example for the grade overall.
From The Kiawah Collection. (#8176)
- 1454 1838 AU55 NGC.** Large Arrows, Small 5, Breen-6514, McCloskey 1-A, R.2. Lustrous yellow-gold with well-defined features overall, though there is some softness on the lightly worn high points. An abrasion is hidden in the denticles above Liberty.
From The Kiawah Collection. (#8176)

Appealing 1838 Classic Head Half Eagle, MS61

- 1455 1838 MS61 NGC.** Small Arrows, Large 5, Breen-6515, McCloskey 2-B, R.2. Brilliant and satiny luster graces the surfaces of this nicely detailed beauty. Aside from the typical grade-consistent abrasions and a small spot at star 9, the overall surfaces are exceptional. This seldom encountered date is usually only seen in circulated grades. Census: 33 in 61, 49 finer (6/09). (#8176)

Scarce 1838-C Classic Head Five Dollar, VF30

- 1456 1838-C VF30 NGC.** Breen-6517, Normal 5, McCloskey 1-A, R.4. A highly desirable issue that has been described as the second-rarest in the Classic Head half eagle series, behind the 1834 Crosslet 4. Softly struck, especially on the reverse, with moderate circulation wear also observed in accordance with the VF30 grade. Several digs and pin scratches are also noted on the reverse.
From The Kiawah Collection. (#8177)

Desirable XF 1838-D Classic Head Five

- 1457 1838-D XF40 NGC.** McCloskey 1-A, R.3. Highly desirable as the lone Classic Head half eagle coined at the Dahlonega Mint. This example reveals an attractive blend of lime-gold and coral toning across each side. The obverse stars appear softly struck, while Liberty's hair detail and the eagle's wingtips show moderate wear. *From The Kiawah Collection.* (#8178)

LIBERTY HALF EAGLES

- 1458 1839 AU50 NGC.** 1839-dated Liberty half eagles comprise a little-known single-year subtype. The portrait differs slightly from the remainder of the series, especially on the eye and bust truncation. This mustard-gold AU example lacks obvious abrasions and displays glimpses of luster within all protected regions. (#8191)
- 1459 1839 AU55 NGC.** An appealing Choice AU example of this early Coronet half eagle design. Yellow-gold fields are pleasingly lustrous and largely undisturbed by the wear on the softly struck high points. *From The Kiawah Collection.* (#8191)

Popular 1839-C Half Eagle, VF30

- 1460 1839-C VF30 PCGS.** Variety 1. The surfaces have a distinctly pebbly texture and display an unusual shade of sea-green in the fields, with straw-gold on the devices. The striking details were typically weak to begin with and have been reduced moderately through circulation wear. A scarce issue and a popular one-year type, with the Charlotte mintmark on the obverse. *From The Kiawah Collection.* (#8192)
- 1461 1839-D XF40 NGC.** Variety 2-A, the more common of two known for the issue. The mintmark is over the 39 of the date and centered in the field, with the left edge of the D over the center of the 3. Bright yellow-gold surfaces display wisps of reddish-orange around the borders. The design elements retain nice detail, and the surfaces contain the expected number of marks. *From The Kiawah Collection.* (#8193)

- 1462 1840 Narrow Mill AU55 NGC.** The yellow-gold surfaces of this Choice AU half eagle exhibit traces of orange and sky-blue at the peripheries. Nicely defined, except for the arrow feathers and adjacent leg and claw. Distributed small marks occur over both sides. (#8194)

- 1463 1840 Broad Mill AU55 NGC.** This early date No Motto Liberty five has dusky apricot toning and a sharp strike. Luster individually illuminates the stars. There are no distracting marks. Based on our recent auction history, about one-third of 1840 half eagles are Broad Mill, which NGC refers to as Large Diameter. *From The Kiawah Collection.* (#8194)

- 1464 1840 Narrow Mill AU58 NGC.** Immensely lustrous with deep orange-gold surfaces. The strike is crisp, and only modest friction precludes a Mint State designation. Census: 63 in 58, 25 finer (5/09). *From The Kiawah Collection.* (#8194)

- 1465 1840-C XF40 NGC.** Variety 1, the only dies. Two die states are known, the first with perfect reverse, the second showing a crack from the rim through the I in AMERICA to the tip of the middle arrowhead. This XF example is in the latter die state. Bright yellow-gold surfaces exhibit typically struck devices and are lightly abraded. Census: 10 in 40, 55 finer (5/09). *From The Kiawah Collection.* (#8196)

Rare Near-Mint 1840-C Five

- 1466 1840-C AU58 PCGS.** Variety 2, identified by die lines near the eagle above the olive branch and arrows. A nicely struck example with few consequential abrasions. 1840 was the year that the Charlotte mintmark moved to the reverse die, which gave the date area a less crowded appearance. Population: 4 in 58, 1 finer (5/09). (#8196)

Well Defined 1840-D Tall D Five Dollar, XF45

- 1467 1840-D Tall D XF45 PCGS.** Variety 3-B. Housed in a green-label PCGS holder, this Choice XF has light green-gold surfaces with splashes of orange toning and considerable luster for the grade. The design features are well defined. Some bright linear abrasions are visible on each side. *From The Kiawah Collection.* (#8198)

Desirable 1840-D Small D Five, XF40

- 1468 1840-D Small D XF40 NGC.** Variety 4-C. The Small Mintmark variety with a diagnostic die crack extending above and below the D. The surfaces on both sides are bright yellow-gold and reveal the normal amount of contact marks scattered about. Generally well defined, except for some weakness on the eagle's plumage. Rare any finer.

From The Kiawah Collection. (#8199)

- 1469 1840-O Broad Mill AU50 NGC.** Usually referred to as the "Broad Mill" variety; NGC calls it the "Large Diameter." These pieces are quite rare, and NGC has only graded four examples in AU50 and a mere four finer (5/09). This is a nice AU coin with the small marks and minor high point wear expected for the grade.

From The Kiawah Collection. (#8200)

- 1470 1841 AU58 NGC.** Unlike its quarter eagle counterpart, the 1841 half eagle has a moderate business strike mintage, though few coins have survived so well as the present near-Mint piece. Richly lustrous yellow-gold surfaces show occasional elements of orange. Well defined with only small, inoffensive marks. Census: 12 in 58, 24 finer (5/09).

From The Kiawah Collection. (#8202)

- 1471 1841-C VF35 NGC.** Variety 1. This early Charlotte Mint half eagle issue had a low mintage of 21,400 pieces, and only 125 to 150 examples are known to survive, according to Doug Winter. This coin is softly struck and moderately worn, with light green surfaces that exhibit only superficial marks.

From The Kiawah Collection. (#8203)

- 1472 1841-D Small D XF40 NGC.** Variety 5-D. This green-gold Dahlonega representative has moderate wear and only a single mentionable mark, found near the O in OF. A so-called "Compass Point" reverse with a broken second vertical shield stripe, as made.

Ex: Greenwich Collection (Bowers and Merena, 1/1991), lot 154.

From The Kiawah Collection. (#8204)

- 1473 1842 Small Letters AU50 NGC.** This is a challenging piece for the specialist, as a combined total of only 27,578 Small Letters and Large Letters half eagles were struck in 1842. This date and variety combination is usually seen well worn. The present AU50 piece shows only mild evidence of friction over the high points. Sharp definition is noted over all design elements. A number of small abrasions pepper the green-gold surfaces on both sides.

From The Kiawah Collection. (#8207)

Bold 1842-C Large Date Five, AU50

- 1474 1842-C Large Date AU50 NGC.** Variety 1, the only known Large Date die combination. The majority of the 27,432-coin mintage for the issue was the Large Date variety. While more plentiful than the Small Date variety, survivors are elusive. This example has a bold strike and considerable luster, with wisps of rose toning over the green-gold surfaces.

From The Kiawah Collection. (#8209)

- 1475 1842-D Small Date XF40 NGC.** Variety 8-E. Noticeably abraded surfaces with vivid green-gold coloration. Quite weakly defined along the borders on both sides. The 8-E, Small Date variety is rarely found above XF.

From The Kiawah Collection. (#8210)

- 1476 1842-O VF30 NGC.** A moderately circulated, yet attractive representative of this challenging earlier New Orleans issue, which appears infrequently on the market. The lime-green surfaces show central softness that characterizes most examples, though the fields and devices are free of significant distractions. Census: 3 in 30, 42 finer (5/09).

From The Kiawah Collection. (#8212)

- 1477 1843 MS60 NGC.** Impressively detailed with richly lustrous yellow-gold surfaces. Though no overt abrasions appear on either side, a number of wispy marks combine to preclude a finer designation. Census: 9 in 60, 64 finer (5/09).

From The Kiawah Collection. (#8213)

- 1478 1843-C VF30 PCGS.** Variety 2. Softly struck, as usual, and moderately worn on both sides, this solid VF30 example shows a number of small, superficial marks and light green-gold color in the centers, with some dappled purple-rose toning near the borders. A scarce Charlotte Mint issue that is seldom offered at any grade level. Nearly as rare as the earlier Charlotte issues.

From The Kiawah Collection. (#8214)

- 1479 1843-C Large Diameter XF40 NGC.** Variety 2. NGC has certified two examples of the 1843-C as Large Diameter, the present piece and an AU58. Presumably the wrong collar die was used, perhaps the Broad Mill collar of 1840. The curls are softly struck, as are the eagle's neck and fletchings. A couple of thin marks are noted near star 2 and Liberty's mouth.

Ex: Long Beach Signature (Heritage, 2/2008), lot 2494, which realized \$2,300.

From The Kiawah Collection. (#8214)

- 1480 1843-D Medium D XF45 ICG.** Variety 10-H. This pleasing green-gold Dahlonega example has a few tiny abrasions and rim nicks, but overall it has an excellent appearance. Considerable luster is still visible, and the overall quality may be slightly finer than the grade suggests.

From The Kiawah Collection. (#8215)

- 1481 1843-D Medium D XF45 NGC.** Variety 10-H. This clean Dahlonega half eagle offers considerable glowing luster for the Choice XF level, and the surfaces are surprisingly smooth despite a thin mark in the field near the chin and a small reverse rim nick between 5 and 6 o'clock. Liberty's curls are typically brought up, but most of the eagle is sharply struck.

From The Kiawah Collection. (#8215)

1482 1843-O Large Letters AU50 PCGS. The more common variety for this issue. Rich sun-yellow and orange surfaces show considerable reflectivity. Lightly worn with abrasions that are wispy rather than overt. Population: 11 in 50, 20 finer (6/09).
From The Kiawah Collection. (#8216)

1483 1843-O Small Letters XF45 PCGS. The rarer variant, offered here as a faintly abraded Choice XF coin with muted yellow-orange luster. Strongly impressed on the central devices.
From The Kiawah Collection. (#8217)

1484 1844-C XF40 NGC. Variety 1, the lone Charlotte pairing for the year. The dusky orange-gold color on this XF example is thoroughly pleasing. Lightly worn with only a handful of minor, scattered marks on each side. Solid eye appeal for the grade. Census: 7 in 40, 50 finer (5/09).
From The Kiawah Collection. (#8220)

1485 1844-D XF45 PCGS. Variety 11-H. Sharply struck throughout the eagle and stars, although Liberty's hair is typically impressed. Glimmers of mint luster are particularly notable on the reverse. The rich yellow-gold surfaces exhibit several small marks, but none offend.
From The Kiawah Collection. (#8221)

Bright 1844-D Five Dollar, AU50

1486 1844-D AU50 PCGS. Possibly an unlisted Winter (2003) variety. The last 4 in the date is centered between the truncation of the bust and the denticles. The surfaces are bright and yellow-gold in color with numerous small abrasions over each side, the latter being characteristic of the issue. (#8221)

1487 1845 MS61 NGC. A well struck representative with pleasing luster and no distracting abrasions. The obverse rim at 6 o'clock has a small die break, and the portrait has several short but heavy die lines, as produced. Not a low-mintage issue, but difficult in Mint State. Census: 11 in 61, 26 finer (5/09).
From The Kiawah Collection. (#8223)

1488 1845-D XF45 NGC. Variety 12-I. Dusky gold-orange surfaces are oddly luminous. This Choice XF example is well struck with few overt abrasions.
From The Kiawah Collection. (#8224)

Rare 1845-D Variety 13-I Five, AU50

1489 1845-D AU50 NGC. Variety 13-I, the High Date obverse. Our auction archives suggest that only about one in five 1845-D half eagles is Variety 13-I, as Variety 12-I is much more available. This example has ample glistening luster, and abrasions are unimportant aside from a few small ticks on the cheek.
Ex: Greenwich Collection (Bowers and Merena, 1/1991), lot 157.
From The Kiawah Collection. (#8224)

Low-Mintage 1845-O Half Eagle, AU50

1490 1845-O AU50 PCGS. Douglas Winter (2006) estimates that a mere 85 to 95 coins survive from this low-mintage issue of 41,000 pieces. The greenish-gold surfaces of this AU example exhibit luster in the recessed areas and relatively good motif definition. Distributed marks are visible over each side, most notably a linear abrasion on Liberty's neck.
From The Kiawah Collection. (#8225)

1491 1846 Small Date MS61 NGC. Two different date sizes are known for the 1846 half eagles, and the Small Date variety is slightly more plentiful. This piece has an obvious rim break on the obverse just past 3 o'clock. Lustrous surfaces exhibit pleasing greenish-gold luster. An attractive piece from an issue usually found in circulated grades.
From The Kiawah Collection. (#8226)

Scarce 1846-C Half Eagle, XF45

1492 1846-C XF45 NGC. Variety 1. Lime-green toning adorns smooth, distraction-free surfaces that still show trace amounts of luster near the peripheral devices. Evenly worn with a level of remaining detail suggestive of a higher grade. Only 12,995 pieces of this scarce issue were struck after the Charlotte Mint had been closed for more than a year because of a fire, and most of them heavily circulated. Census: 10 in 45, 43 finer (5/09).
From The Kiawah Collection. (#8227)

1493 1846-D XF45 NGC. Variety 14-I. This variety features a high date, with the 6 closer to the neck than to the denticles. The mintmark is mostly above the V in FIVE. An evenly worn example with light khaki coloration and scattered marks. Census: 22 in 45, 45 finer (5/09).
From The Kiawah Collection. (#8228)

Lovely 1846-D Five, AU50

- 1494 1846-D AU50 NGC.** Variety 16-K. The date is low, and the Dahlonega mintmark shows no sign of repunching. Luster brightens the stars, legends, and device crevices. The fields and portrait are generally smooth for an AU gold coin. The dies appear perfect except for minor clashing near Liberty's chin.
From The Kiawah Collection. (#8228)

Choice XF 1846-D/D Half Eagle

- 1495 1846-D/D XF45 NGC.** Variety 16-L. The repunched mintmark is bold and prominent. Light green-gold surfaces have moderate marks and a few heavier abrasions on each side, consistent with the grade. Dahlonega and Charlotte gold pieces are often found with similarly abraded surfaces.
From The Kiawah Collection. (#8229)
- 1496 1847 AU58 PCGS.** Breen-6570. This is a minor repunched date variety with the top of an extra 7 visible above that digit. Satiny and lustrous, this near-Mint example has rich yellow luster with a trace of green. The devices are sharp, and the overall aesthetic appeal is excellent. (#8231)
- 1497 1847 MS61 PCGS.** The yellow-gold surfaces of this half eagle display luster in the recessed areas, and a well executed strike leaves strong definition on the devices. Distributed light marks are scattered over both sides. (#8231)
- 1498 1847 MS61 NGC.** A bright, attractive coin with khaki and gold toning and well struck design features. A few pesky marks are noted in the fields. This is a relatively plentiful No Motto half eagle issue, popular with type collectors.
From The Kiawah Collection. (#8231)

- 1499 1847 MS61 NGC.** Breen-6570. 1847 appears to be a year of indifferent date punching at the Philadelphia Mint, since several die varieties of 1847 half eagles feature misplaced or repunched dates. *The Cherrypickers' Guide* lists four varieties for the date but excludes the present example, which shows clear recutting on the top of the 7. This piece is well struck and original. The left obverse has a couple of slender, faint, but relatively lengthy marks.
From The Kiawah Collection. (#8231)
- 1500 1847-C XF45 NGC.** Variety 1. As with most of the 1847 fives struck at the Charlotte Mint, the current example served at least briefly in the channels of commerce. This lemon-gold specimen is adequately struck and visually appealing. The few scattered abrasions visible are commensurate with the assigned grade. Charlotte Mint gold coins hold an important place in the history of U.S. numismatics and are always popular with collectors.
From The Kiawah Collection. (#8233)
- 1501 1847-D XF40 NGC.** Variety 17-I. Few examples of the 1847-D half eagle issue have survived in high grades. Most circulated, and many survivors have suffered from mishandling or cleaning through the years. The current example shows well for the grade and issue and would be a welcome addition to a midlevel collection.
From The Kiawah Collection. (#8234)
- 1502 1847-D XF45 NGC.** Variety 16-M. On this variety the date is high and the right edge of the 7 touches the neck; the upright of the mintmark is over the upright of the E in FIVE. With a mintage of 64,405 pieces, the 1847-D is one of the more available D-mint fives. Apricot-gold surfaces exhibit nicely defined motifs, except for the usual softness in the hair curls and the eagle's neck feathers. The surfaces are relatively clean for a circulated coin; a small indentation above the top arrowhead may assist in identifying the piece.
From The Kiawah Collection. (#8234)
- 1503 1847-O VF20 ANACS.** A glossy olive-gold example with lilac hues on the high points and ample details within the eagle's wings. While the 1847-O eagle and quarter eagle are relatively common, the 1847-O five is elusive, since only 12,000 pieces were struck.
From The Kiawah Collection. (#8235)
- 1504 1848 MS61 NGC.** Dusky orange-gold surfaces have soft but pleasing luster. Well struck with abrasions that are more wispy than overt. Strong eye appeal. Census: 15 in 61, 21 finer (5/09).
From The Kiawah Collection. (#8236)
- 1505 1848-C XF45 NGC.** Variety 1. Glints of bright luster fill the legends and device recesses. Liberty's curls have received a typical strike, but the eagle's plumage is generally sharp; only the fletchings and claws are indistinct. Most of the stars display clear centrils. Handling marks are distributed, but none individually distract. A suitable candidate for a Charlotte Mint gold type set.
From The Kiawah Collection. (#8237)

Exceptional 1848-C Half Eagle, MS64
Second Finest Known, Ex: Bass

1506 1848-C MS64 PCGS. CAC. Variety 1. A fairly substantial number (by Charlotte Mint standards) of 1848-C fives were minted, but the vast majority of the original production of 64,472 pieces has been either lost or reduced in eye appeal as a result of circulation. It is estimated that there are a total of 250-350 pieces extant today in all grades. However, well over half of the known examples are in the VF-XF grade range. Only three to five pieces are believed to grade Uncirculated. This coin is listed as second finest on Doug Winter's most recent Condition Census, and it is numerically tied with the Eliasberg coin, which is also graded MS64.

Some softness of strike is noted on the curls around Liberty's face and on the eagle's neck and right (facing) leg feathers. These features are, however, normal for the issue and do not detract from the overall pleasing eye appeal. Both sides show semiprooflike fields that glow with bright yellow-gold coloration. This piece lacks the normally encountered extensive abrasions. However, it is important to note a couple that will aid in identifying this important coin in the future: A shallow, near-vertical mark is at the end of Liberty's chin, a series of small contact marks appears between star 5 and Liberty's forehead, and a short, shallow mark is noted on the reverse just below the upright of the E in UNITED.

Ex: Mike Brownlee to Harry Bass, March 1972; Harry Bass Collection (Bowers and Merena, 10/1999), lot 990, where it realized \$50,600; Long Beach Auction (Heritage, 2/2000), lot 6689; private collection. (#8237)

- 1507 1848-D XF45 NGC.** Variety 19-O. Luminous sun-yellow surfaces show glimpses of orange. A well-defined example with light, scattered abrasions from circulation.
From The Kiawah Collection.(#8238)
- 1508 1849 AU58 PCGS.** Both the strike and eye appeal are strong for this popular Gold Rush-era half eagle issue. Though light wear and abrasions are present in the fields and on the devices, each side offers strong yellow-gold luster with a degree of reflectivity on the obverse. Population: 7 in 58, 7 finer (5/09).(#8240)

Finest-Graded 1849/49 Half Eagle, MS64

- 1509 1849/49 MS64 NGC.** Breen-6582. Doubled 49. The 4 and 9 in the date are heavily repunched, but with only minor separation so the repunching appears somewhat as a thickening of the numerals. Breen described a second variety as an "Overdate" that William Woodin initially called an 1849/7 variety. This example is clearly the doubled 49 variety, and apparently quite rare. NGC has certified 23 examples of this variety, and 140 examples of the normal 1849 variety. Of all 163 coins they have certified, the present piece is the only MS64, with none finer (6/09). Therefore, not only is this piece the finest 1849/49 half eagle that NGC has certified, it is the finest of any 1849 half eagle they have graded. In fact, PCGS has never graded an 1849 half eagle finer than MS62, making this the single finest example of the date graded by either service. Essentially, it is the finest known 1849 half eagle.

This remarkable half eagle is fully lustrous with outstanding orange-gold surfaces that have a few trivial marks on each side, preventing an even higher grade. The hair details behind the eye and below the ear are a trifle weak, as are the eagle's neck and the exposed arrow feather. All other design elements are nicely defined. (#8240)

- 1510 1849-C XF45 PCGS.** Variety 1. Winter describes the 1849-C as "the most available Charlotte half eagle struck before 1850" in better grades, and type collectors should pay attention to the present lot. Despite light wear concentrated on the high points, this well struck antique-gold piece has a decidedly brassy sheen to the fields. (#8241)
- 1511 1849-C XF45 NGC.** Variety 1. Just a bit softly defined in the centers, with glimmers of semireflective luster exposed on either side. The reverse shows the usual die state, with a small die crack running from the left side of the U in UNITED into the leaves and the eagle's left (facing) leg. The fields are a trifle scuffy from circulation, and a bright golden appearance greets the viewer. A flashy 1849-C five.
From The Kiawah Collection.(#8241)
- 1512 1849-D XF40 NGC.** Variety 22-N. The still-luminous orange-gold surfaces of this midseries Dahlonega piece show even, light to moderate wear over each side. The fields and devices exhibit numerous scattered abrasions, including one that affects the 8 and 4 of the date.
From The Kiawah Collection.(#8242)
- 1513 1849-D XF45 NGC.** Variety 22-L. A luminous olive-gold Choice XF Dahlonega five that has a blush of rose-gold on the upper right reverse border. Careful study reveals marks on the jaw and on the hair beneath the Y in LIBERTY.
From The Kiawah Collection.(#8242)
- 1514 1850 AU58 PCGS.** The low mintage 1850-P is very scarce in all grades and a rarity in Mint State. The surfaces of this near-Mint piece are bright apricot-gold and retain generous amounts of original mint luster. Excellent detail is visible in the design elements, save for the usual softness in the eagle's neck feathers. Population: 9 in 58, 7 finer (6/09).
Ex: Long Beach Signature (Heritage, 5/2008), lot 3237, which realized \$1,840.
From The Kiawah Collection.(#8243)
- 1515 1850-C XF40 PCGS.** Variety 1, easily identified by a radial die crack on the reverse between the U in UNITED and the period. This minimally marked representative has lovely orange-gold patina. The obverse is a little soft, as typical for the issue. One of a mintage of just 9,148 coins. (#8244)
- 1516 1850-C XF45 PCGS.** Variety 1. This variety is easily spotted by the radial die crack that runs alongside the left serif of the U in UNITED. The present green-gold example shows typical incompleteness on the eagle's lower legs, claws, and fletchings but is pleasingly impressed elsewhere.
Ex: Palm Beach Signature (Heritage, 3/2006), lot 1859, which realized \$2,415.
From The Kiawah Collection.(#8244)
- 1517 1850-C Weak C AU53 PCGS.** Variety 4. The 1 in the date does not touch the bust, and the mintmark is entered over the E in FIVE. While the mintmark is faint, its shape remains apparent when inspected beneath a loupe. The rest of the details are crisply defined, and there are no marks of any significance. Luster glimmers throughout the yellow-gold surfaces.
From The Kiawah Collection.(#98244)
- 1518 1850-D XF40 NGC.** Variety 24-P. This pale green-gold Dahlonega five has noticeable glimpses of soft luster within protected areas. The strike is typical on Liberty's hair and the eagle's neck and fletchings.
From The Kiawah Collection.(#8245)

1519 1850-D Weak D XF40 PCGS. Variety 23-O. The Weak D reverse showing heavy peripheral die cracks, as always. Bright straw-gold color with light, scattered abrasions. For coins certified as Weak D, PCGS has graded just three finer examples (5/09).
From The Kiawah Collection. (#98245)

1520 1851 MS61 NGC. Beautiful pink-gold surfaces show lots of luster and rich apricot-colored accents. The fields are free of the offensive marks that are often seen on coins of this grade. Although the mintage was large at 377,505 coins, the majority of survivors grade just XF or AU. Census: 30 in 61, 33 finer (5/09).
From The Kiawah Collection. (#8246)

1521 1851-C AU50 NGC. Variety 1. The punchmark as the Winter reference describes is visible on the lobe of Liberty's ear, and the C mintmark on the reverse is centered. The central strike is somewhat weak, as usually seen on the issue, but only a few light abrasions consistent with the grade appear. Considerable luster remains.
From The Kiawah Collection. (#8247)

1522 1851-D XF40 PCGS. Variety 26-R. The date is entered low, and base of the repunched first 1 enters the dentils. This typically struck green-gold example is smooth aside from a slender lamination across the portrait, and a small deep rectangular mark beneath the lovelock. Certified in a green label holder.
From The Kiawah Collection. (#8248)

1523 1851-D AU50 PCGS. Ex: Bass. Variety 26-O. Well struck and undipped with a pleasing band of luster across the left-side stars. The "Weak D" variety, although the upper half of the mintmark is unmistakable. Occasional glimpses of green debris are inconspicuous within design crevices.

Ex: *Superior*, 12/1972, lot 1951; *Harry W. Bass, Jr. Collection, Part II (Bowers and Merena*, 10/1999), lot 1028.
From The Kiawah Collection. (#8248)

1524 1851-O XF45 NGC. CAC. Gold-orange color in the fields fades into yellow on the lightly worn devices. Modestly marked and attractive, a lovely O-mint five. Census: 29 in 45, 66 finer (5/09).
From The Kiawah Collection. (#8249)

1525 1852 MS61 PCGS. The 1852 is one of the few No Motto half eagles that is occasionally available in Mint State. This example is subtly lustrous, well struck, and free of singularly mentionable marks. Population: 12 in 61, 61 finer (5/09).
From The Kiawah Collection. (#8250)

1526 1852-C XF40 PCGS. Variety 2, a better die marriage that has the 1 in the date left-aligned with the bust tip. This example has olive-gold color and is a bit bright and glossy. The eagle's wings are boldly defined but Liberty's curls are typically struck, with slight softness on the high points. Housed in an older green insert PCGS holder and nice for the grade.
From The Kiawah Collection. (#8251)

1527 1852-C XF45 PCGS. Variety 1. Always in demand due to its Charlotte Mint origin, this example is bright gold-colored in the centers, with plum and maroon patina around the peripheries on both sides.
From The Kiawah Collection. (#8251)

Exceptional 1852-C Five Dollar, MS63

1528 1852-C MS63 PCGS. Variety 1. With its ample mintage and above-average surviving population, the 1852-C is a popular half eagle issue for the type collector of branch mint gold. For most coins, even better-grade pieces, eye appeal is a concern, since examples often show weak strikes and numerous heavy marks.

This attractive representative, housed in a prior-generation PCGS holder, is one of the most gorgeous examples available today. The central devices show above-average definition, and the fields have attractive, satiny luster that offers a significant degree of reflectivity. While a number of light, scattered marks are present on each side, the surfaces have none of the sharp, distracting abrasions that so often appear on examples of this issue. Population: 1 in 63, 3 finer (3/09). (#8251)

1529 1852-D VF35 PCGS. Variety 28-U. Deep butter-gold toning embraces this Dahlonega gold type coin. Glimpses of dirt within the wings suggest originality, but thin back-and-forth marks are noted on the left obverse field and across the portrait beneath the ear. The field above the eagle also displays a few thin marks. (#8252)

1530 1852-D XF45 PCGS. Variety 27-U. The luster of this softly struck Choice XF coin is pillowy and oddly radiant. Only a few faint abrasions are present on each side.
From The Kiawah Collection. (#8252)

Elusive 1852-D Half Eagle, MS60

1531 1852-D MS60 NGC. Variety 27-U. A splendid light yellow piece with delicate traces of green patina over reflective, prooflike fields, and modest abrasions that are consistent with the grade. With one of the higher Dahlonega mintages, examples are readily available, although Mint State pieces are rare. Census: 3 in 60, 16 finer (5/09). (#8252)

1532 1853 MS61 NGC. Highly lustrous surfaces display few marks and benefit from a bold strike. The color is a healthy orange-gold and the eye appeal, especially with regards to the obverse, is great. Like the 1852, the relatively high mintage 1853 is available in circulated grades, yet becomes noticeably scarce in Mint State. Census: 29 in 61, 45 finer (5/09).
From The Kiawah Collection. (#8253)

Attractive 1853-C Five Dollar, AU53

1533 1853-C AU53 PCGS. Variety 1. The digit 1 is close to the bust, with a small curved notch in the lower bustline. Splashes of apricot visit the yellow-gold surfaces, more so on the reverse. Some of the star radials are weak, as are the eagle's neck feathers, but the remaining design elements are nicely defined. Minute marks are distributed over each side. Usually found in VF and XF.
From The Kiawah Collection. (#8254)

1534 1853-D Large D XF45 NGC. Variety 29-T. An apricot-gold Dahlonega representative whose surfaces are smooth save for a thin mark southeast of the mintmark. The stars are well struck, while the coronet tip and the curls of Liberty are lightly brought up. A die crack crosses the lower portion of the eagle between 4:30 and 8:30.
From The Kiawah Collection. (#8255)

1535 1853-D Large D ICG. AU Details. Variety 29-V. Softly struck overall with light wear on the high points. ICG does not specify the reasons for the details grade, but the lemon-gold surfaces are bright with hairlines, indicating a past cleaning, and several faint scratches are present in the fields. (#8255)

Conditionally Rare 1854 Half Eagle, MS64

1536 1854 MS64 NGC. Bright lemon-yellow patina complements enticing satiny luster that glistens throughout the lightly abraded surfaces. The centers are a bit soft, as often seen, but the stars are fully defined. Given its rarity in Mint State grades, the 1854 half eagle is an underrated—and thus undervalued—issue. Neither NGC nor PCGS has certified any coins finer than the present specimen (6/09).
From The Bay State Collection, Part One. (#8256)

1537 1854-C Fine 15 PCGS. Variety 1. The more desirable sharp mintmark die variety of this unsung Charlotte rarity, one of perhaps fewer than 70 pieces known from a reduced mintage of 39,283 coins. The central details are poorly struck, as is normal, and a distinctive green-gold color mixes with blushes of pale orange.
From The Kiawah Collection. (#8257)

1538 1854-C Weak C XF40 PCGS. Variety 2. The Weak Mintmark variety, though not specifically attributed as such. Softly defined overall and lightly worn with scattered abrasions. Yellow-gold color yields to hints of wheat and orange.
From The Kiawah Collection. (#98257)

1539 1854-C Weak C XF45 NGC. Variety 2. The mintmark can be discerned with the aid of low magnification. A subdued, khaki-gold example of this rare Charlotte Mint variety. Superficial abrasions and modest wear are noted on both sides. Census: 9 in 45, 15 finer (5/09).
From The Kiawah Collection. (#98257)

1540 1854-D Large D XF45 PCGS. The Variety 30 obverse paired with the unlisted but by now well-documented reverse that has two points of contact between the mintmark and the central device. Pale straw-gold and light yellow-gold color mingle in surprising radiance on this well struck Choice XF coin. (#8258)

1541 1854-D Large D AU50 PCGS. Variety 31-X. Surprisingly vibrant for the grade, with straw-gold surfaces that show numerous fine hairlines over each side. One of the more available half eagles from the Dahlonega Mint. It has been estimated that 225-250 coins survive in all grades from an original mintage of 56,413 pieces, although certified population figures from NGC and PCGS suggest a somewhat higher number.
From The Kiawah Collection. (#8258)

1542 1854-D Weak D AU50 NGC. A Weak D example, paired with the Variety 31 obverse die. The mintmark is perceptible as a faint curve of the top of a D beneath the arrow feather. A nicely struck representative with refreshingly unmarked surfaces and noticeable pockets of luster.
Ex: Long Beach Signature (Heritage, 6/2005), lot 7784; FUN Signature (Heritage, 1/2006), lot 5197.
From The Kiawah Collection. (#98258)

1543 1854-O AU50 PCGS. Bright brass-gold surfaces display traces of luster in the protected areas and are lightly abraded. Well defined, except for minor softness on the eagle's neck and right (facing) claw and adjacent fletchings. (#8259)

1544 1854-O AU55 PCGS. A scarce issue from the New Orleans Mint, coined after production began at the new San Francisco facility. As a result of that opening, large quantities of California gold remained on the West Coast. Until 1854, New Orleans was the closest mint and received large gold shipments from San Francisco. This Choice AU piece has splashes of orange toning over green-gold luster. Population: 16 in 55, 22 finer (5/09).
From The Kiawah Collection. (#8259)

1545 1855 MS61 NGC. The semiprooflike luster displays peach toning. A few faint marks are present, but this nicely struck No Motto five dollar has substantial eye appeal. Rare in Mint State, since most survivors from the mintage of 117,098 pieces are in XF or AU grades. Census: 9 in 61, 13 finer (5/09).
Ex: Long Beach Signature (Heritage, 9/2008), lot 3690, which realized \$2,070.
From The Kiawah Collection. (#8261)

Misplaced Date 1855 Half Eagle, MS62

1546 1855 MS62 PCGS. CAC. A misplaced date variety, with the upper tip of an errant 1 rising from the dentils beneath the 18. A lot of eye appeal for the issue, with Liberty's face, neck and the surrounding fields of high quality for this date. A bright example with an uncommonly smooth obverse and a solitary thin pincrash above the eagle. Population: 7 in 62, 9 finer (6/09).
Ex: Long Beach Signature (Heritage, 9/2005), lot 4599, which realized \$3,220. (#8261)

Scarce 1855-C Half Eagle, AU50

1547 1855-C AU50 PCGS. Variety 1. This Charlotte Mint half eagle owes its rarity to a limited original mintage of 39,789 pieces and heavy circulation throughout the antebellum South. The outstanding example offered here is generally light in color with a subtle greenish patina across each side. Hints of reflectivity are still seen about the devices. Only the eagle's neck feathers, arrow feathers, and talon details show any appreciable loss of sharpness from improper striking pressure. Faint high point wear and numerous small abrasions define the grade. Population: 21 in 50, 30 finer (5/09).
From The Kiawah Collection. (#8262)

Attractive 1855-D Large D Half Eagle, XF40

1548 1855-D Large D XF40 PCGS. Variety 32-AA, the usually seen Large D mintmark variety of the 1855-D half eagle issue. Attractive deep orange-gold patina is imbued with hints of mint-green. The weak strike in the central areas is typical of this date. Lightly marked on each side. Population: 19 in 40, 55 finer (5/09).
From The Kiawah Collection. (#8263)

Low-Mintage 1855-D Large D Five, AU55

1549 1855-D Large D AU55 NGC. Variety 32-AA. Usually found in VF and XF grades. High-end AU coins are difficult to obtain, and Mint State pieces are exceedingly rare. This Choice AU specimen displays glimmers of luster, particularly within the eagle and the reverse legends. The strike is sharp in places, although the eagle's neck and Liberty's curls are lightly brought up. Distributed marks are minor. Just 22,432 pieces were produced. Census: 14 in 55, 23 finer (5/09). (#8263)

Elusive 1855-O Five Dollar, XF45

1550 1855-O XF45 PCGS. Glimmers of luster reside in the recesses of this yellow-gold Choice XF specimen, and the design elements exhibit better definition than ordinarily seen on the issue. A thin mark above the right (facing) wing and moderate abrasions in the field near the chin merit only passing mention. One of the more elusive half eagles from this mint, due in part to the small production of 11,100 pieces. Population: 12 in 45, 23 finer (5/09).
From The Kiawah Collection. (#8264)

Condition Scarcity 1855-S Five, AU53

- 1551 1855-S AU53 PCGS.** The 1855-S half eagle had a mintage of just 61,000 pieces. When encountered, it is usually only seen in VF or XF grades. It becomes quite scarce at the AU level and is rare in Mint State. The present AU53 specimen displays peach-orange patina. Considerable luster remains in the areas around the design elements and the interstices. The devices are well defined, including all star centers and eagle feathers. Only Liberty's hair around the ear and the curls on the neck are a touch soft. Scattered light contact marks appear on both sides, none serious. Population: 12 in 53, 25 finer (6/09).
From The Kiawah Collection. (#8265)

Sharp 1856 Half Eagle, MS61

- 1552 1856 MS61 PCGS.** The 1856 can be located in circulated grades with a little searching and patience. Mint State examples are quite scarce; anything above the Select level is very rare. Rich orange-gold patina is laced with traces of mint-green, and an above-average strike leaves strong definition on the motifs, including the centers, areas that are often weak. Nearly full luster endows both sides, each of which reveals distributed minuscule marks. Population: 6 in 61, 17 finer (5/09).
From The Kiawah Collection. (#8266)
- 1553 1856-C XF45 PCGS.** Variety 1, the only known dies. Despite its mintage of 28,457 pieces, the 1856-C is an underrated coin among Charlotte half eagles. It is rarely seen above XF and invariably is softly struck, as this coin is. The surfaces are lightly abraded for an XF coin, and the orange-gold coloration turns noticeably deeper around the peripheral devices.
From The Kiawah Collection. (#8267)
- 1554 1856-D XF45 NGC.** Variety 33-BB. The lone variety for the year. This problem-free Choice XF Dahlonga example is olive-gold with hints of orange luster in design recesses. Luminous with a pleasing appearance overall. Census: 18 in 45, 69 finer (5/09).
Ex: Long Beach Signature (Heritage, 5/2008), lot 3257, which realized \$2,242.50.
From The Kiawah Collection. (#8268)

- 1555 1856-O XF40 PCGS.** Light yellow color overall with hints of green-gold radiance. This O-mint half eagle offers considerable eye appeal despite light, scattered abrasions. Population: 11 in 40, 29 finer (5/09).
From The Kiawah Collection. (#8269)

- 1556 1856-S AU55 PCGS.** Each side is flashy orange-gold with nearly all of its intended detail and no singularly distracting marks. This charming Choice AU coin offers great eye appeal for the grade. Population: 26 in 55, 14 finer (5/09).
From The Kiawah Collection. (#8270)

Elusive 1856-S Half Eagle, AU58

- 1557 1856-S AU58 NGC.** The 1856-S half eagle is exceptionally difficult to find in Mint State grades, and even high AU specimens are seldom encountered. This yellow-gold representative boasts a powerful strike and dazzling luster. There are no marks worthy of mention on either side. Census: PCGS and NGC combined have certified only a dozen examples finer (6/09). (#8270)
- 1558 1857 MS61 NGC.** A precisely struck yellow-gold No Motto five with surprisingly unblemished surfaces. Luster dominates the borders and devices. Despite its Philadelphia Mint origin, a scarce date with a mintage of less than 100,000 pieces. Census: 15 in 61, 26 finer (5/09).
Ex: FUN Signature (Heritage, 1/2008), lot 4261, which realized \$1,955.
From The Kiawah Collection. (#8271)

Pleasing 1857-C Five Dollar, AU50

- 1559 1857-C AU50 PCGS.** Variety 1, the only one known. Among the more available Charlotte half eagles, and one also that can occasionally be located in AU condition. This piece is typically struck on the obverse, with soft definition on the hair curls and just the slightest loss of detail on the neck of the eagle. The slightly subdued orange-gold surfaces are tinted with mint-green and reveal a few small abrasions. An ideal piece for either a date set or as a type coin.
From The Kiawah Collection. (#8272)

Pleasing 1857-D Half Eagle, XF45

- 1560 1857-D XF45 NGC.** Variety 34-CC, the only known dies for the year. Traces of reflective luster remain in the protected areas, especially near the borders, with lightly abraded pale yellow surfaces on each side. Typical survivors of this scarce issue grade VF or XF, with few in AU or finer grades.
From The Kiawah Collection. (#8273)

- 1561 1857-O XF45 NGC.** From a mintage of just 13,000 pieces, the 1857-O is seldom seen above XF. This Choice XF example has moderate wear on the hair and eyebrow, but the wings are splendidly detailed. The straw-gold surfaces are less abraded than is customary for the grade.
Ex: Steve Glenn Collection (Heritage, 4/2006), lot 2737, which realized \$1,840.
From The Kiawah Collection. (#8274)

- 1562 1857-S AU55 NGC.** This early San Francisco No Motto five has a sharp strike and slight friction on the hair bun and wing tips. Crisply struck with scattered inconsequential abrasions over each side. Most of the 87,000 examples coined encountered heavy circulation. Census: 20 in 55, 24 finer (4/07).
From The Kiawah Collection. (#8275)

- 1563 1858 AU58 NGC.** From a small mintage of 15,136 pieces, the 1858 half eagle is definitely a better date. The present coin is sharply struck and has only the slightest friction on the high points. Luster brightens the design elements, and there are only a couple of reportable marks near Liberty's jaw and lips. The shield exhibits die crumbling, uncommon for the series.
From The Kiawah Collection. (#8276)

- 1564 1858-C XF40 NGC.** Variety 2. Sharply defined for the XF40 grade, and the light peach toning is both consistent and original. There are no marks, although shallow strike-throughs are seen on the reverse field above the arrowheads and the eagle's head. So many Charlotte half eagles have been dipped or brightened, but the present piece provides an exception. Certified in a former generation holder.
From The Kiawah Collection. (#8277)

- 1565 1859 AU55 NGC.** An appealing Choice AU half eagle with considerable luster and lovely lime-green and peach toning. Well struck with only a whisper of high point wear noted on each side. Moderate marks are observed on Liberty's cheek and eyebrow. Census: 11 in 55, 24 finer (5/09).
From The Kiawah Collection. (#8280)

- 1566 1859-C XF40 PCGS.** Variety 1. The mustard-gold and butter-yellow surfaces show light, even wear across the well struck central devices. Moderately abraded in the obverse fields, yet pleasing.
From The Kiawah Collection. (#8281)

Condition Census 1859-C Half Eagle, MS62

- 1567 1859-C MS62 PCGS.** Variety 1. Among the finest known examples of this late Charlotte issue. Only bettered by two MS63 pieces and the fabulous MS66 coin formerly in the Elrod and Eliasberg Collections. Sharply defined on the obverse, the reverse shows the usual softness from an improperly annealed reverse die. The obverse fields are bright and moderately prooflike, a result of heavy die striations on that side. Even orange-gold toning graces both sides. Careful study locates a mint-produced strike-through on the field above the eagle's neck, and a couple of delicate hair-thin marks on the cheek. Population: 1 in 62, 2 finer (6/09). (#8281)

- 1568 1859-D Medium D XF45 NGC.** Variety 36-CC. The usual variety for this low mintage issue. An apricot-gold Dahlonge five that has only one mark of any consequence, a brief pinscratch beneath the jaw. The eagle's neck and Liberty's hair are typically brought up, but the remainder of the design is bold.
From The Kiawah Collection. (#8282)

Uncirculated Medium D 1859-D Half Eagle

- 1569 1859-D Medium D MS61 PCGS.** Variety 36-CC. A mildly prooflike honey-gold representative with luminous, clean, and remarkably unabraded fields. Softly impressed on portion of the devices, as is so often the case for Dahlonega Mint gold coins. Only 10,366 pieces were struck, among the lowest D-mint half eagle emissions. Population: 6 in 61, 7 finer (6/09). (#8282)

- 1570 1860 AU58 NGC.** Impressively detailed with just a touch of friction on the high points. Scattered abrasions are present in the immensely lustrous yellow-gold fields, but they have little impact on the eye appeal. Census: 26 in 58, 7 finer (5/09).
From The Kiawah Collection. (#8284)

- 1571 1860-C VF35 PCGS.** Variety 1. Sole variety for the year. Dusky yellow-orange color overall with elements of peach near the rims. Moderately worn but modestly abraded, the perfect combination for a Choice VF example.
From The Kiawah Collection. (#8285)

- 1572 1860-C—Mount Removed, Improperly Cleaned—NCS. XF Details.** Variety 1. Strongly struck with bright, lightly hairlined yellow-gold surfaces that show splashes of peach. The obverse displays nicely, though the reverse exhibits a number of rough patches where the mount was removed. (#8285)

Desirable 1860-S Half Eagle, XF45

- 1573 1860-S XF45 NGC.** A subdued golden-orange example with the usual striking softness on the eagle. Infrequently offered in any grade, the 1860-S is particularly elusive in AU and better condition, at least as rare as its modest mintage of 21,200 pieces suggests. The major services have certified just a single Mint State coin. Census: 19 in 45, 22 finer (5/09).
From The Kiawah Collection. (#8287)

- 1574 1861 MS61 NGC.** A nicely struck piece with traces of orange and green on the lustrous yellow-gold surfaces. Numerous abrasions that appear in the fields on both sides limit the grade. The 1861 half eagle is the most available No Motto issue and is the ideal choice for a type set.
From The Kiawah Collection. (#8288)

- 1575 1861-S VF30 PCGS.** An elusive half eagle in a green-label holder, surviving from a mintage of only 18,000 coins. This piece has considerable pale-blue toning over orange-gold surfaces.
From The Kiawah Collection. (#8291)

- 1576 1862-S VG8 NGC.** A well worn representative of this rare Civil War issue. Gold coins actually circulated in California during this time period, unlike the East Coast or the South where gold and silver coinage was largely hoarded. The date and mintmark remain strong on this VG8 example.
From The Kiawah Collection. (#8293)

- 1577 1863-S VF25 NGC.** Perhaps not as rare as once thought, but still a scarce issue that obviously suffered from the typically extensive circulation of gold coins minted in San Francisco, even during the Civil War. This piece is moderately worn and displays slight doubling of the denticles on the right side of the obverse. A moderately worn survivor with scattered minor abrasions on each side.
From The Kiawah Collection. (#8295)

- 1578 1864—Improperly Cleaned—NCS. XF Details.** The brass-gold surfaces of this Civil War-era five dollar reveal fine hairlines under magnification. Nicely detailed despite some circulation wear.
From The Kiawah Collection. (#8296)

Seldom-Seen 1865-S Half Eagle, XF45

- 1579 1865-S XF45 NGC.** With a mintage of only 27,612 coins and immediate distribution into commerce, it is clear that the 1865-S half eagle is a rare issue. This desirable, lightly circulated piece has faint bluish patina over medium yellow surfaces. Both sides have typical minor surface marks, as expected for the grade.
From The Kiawah Collection. (#8299)

Low-Mintage 1866-S No Motto Five, VF35

- 1580 1866-S No Motto VF35 NGC.** This issue had a small production of 9,000 pieces, most of which entered circulation or were melted. This Choice VF specimen displays even wear on its semibright yellow-gold surfaces, and the design elements retain nice detail. The expected small marks are scattered over both sides.
From The Kiawah Collection. (#8300)

- 1581 1866 XF45 PCGS.** All 1866 half eagles struck at Philadelphia are of the Motto variety, but only 6,700 of them were produced for circulation. This Choice XF piece is lightly abraded with subtly radiant lemon-gold surfaces. Population: 6 in 45, 15 finer (5/09).
From The Kiawah Collection. (#8311)

Elusive 1866-S Motto Five, XF40

- 1582 1866-S Motto XF40 NGC.** Yellow-gold surfaces exhibit a good amount of detail on the design elements, and the scattering of minute contacts over each side is not bothersome. Despite a mintage considerably larger than its No Motto counterpart, the 1866-S Motto is generally found in Very Fine and Extremely Fine; About Uncirculated pieces are rare, and the issue is virtually unknown in Mint State. Census: 5 in 40, 25 finer (5/09).
From The Kiawah Collection. (#8312)

- 1583 1867 XF40 PCGS.** Well struck overall with bright lemon-gold surfaces that show splashes of orange. Lightly worn but modestly abraded for the grade. Population: 5 in 40, 24 finer (5/09).
From The Kiawah Collection. (#8313)

- 1584 1867-S XF40 NGC.** Traces of luster are evident despite moderate high point wear. The bright surfaces lack obvious marks, and the strike is typical on the eagle's neck and Liberty's hair. A scant 29,000 pieces were struck, most of which were melted long ago.
From The Kiawah Collection. (#8314)

Sharp 1868 Half Eagle, AU50

- 1585 1868 AU50 PCGS.** Fewer than 6,000 1868 half eagle circulation strikes were produced in Philadelphia. Traces of luster appear in the protected areas of this AU example, and the design elements benefit from a well executed strike. Peach-gold surfaces exhibit traces of mint-green and rose. Moderately abraded, yet the eye appeal is fairly nice. Population: 8 in 50, 18 finer (5/09).
From The Kiawah Collection. (#8315)

- 1586 1868-S AU50 NGC.** The 1868-S was well used in the channels of commerce, and from the mintage of 52,000 pieces, only three coins have been certified to date as Mint State, none above the MS61 level (5/09). This coin shows light friction over the high points. Softly brought up, as usual, at the centers, but a surprising amount of mint luster remains for a coin in this grade. Census: 9 in 50, 35 finer (5/09).
From The Kiawah Collection. (#8316)

- 1587 1869 XF40 NGC.** A yellow-gold representative that has the expected number of unimportant marks. A portion of the original luster adheres to the stars, letters, and devices of this coin. An extremely scarce issue, of which only 1,760 pieces were initially produced.
Ex: FUN Signature (Heritage, 1/2006), lot 5245.
From The Kiawah Collection. (#8317)

Conditionally Rare 1869-S Five, AU50

- 1588 1869-S AU50 NGC.** A pleasing survivor of the elusive 1869-S issue, from a meager mintage of only 31,000 coins. Gold production in San Francisco was mostly double eagles for trade purposes, and smaller gold coins were only minted on occasion according to the demands of commerce. Accordingly, most smaller S-mint gold coins that still exist are well worn. Light pinkish-gold surfaces exhibit scattered abrasions, but the overall quality is much finer than usually seen.
From The Kiawah Collection. (#8318)

- 1589 1870 AU50 PCGS.** Both sides have evidence of reflective, prooflike surfaces and rich yellow-gold color with light abrasions of little consequence. Considerable luster remains on this scarce half eagle. Only 4,000 pieces were originally coined.
From The Kiawah Collection. (#8319)

Scarce, Appealing 1871 Half Eagle, AU53

- 1590 1871 AU53 PCGS.** With just 3,200 coins struck and few surviving to the present day, the 1871 half eagle is elusive in all grades. Yellow-gold and peach coloration adorns both sides of this AU53 example, each of which retains luster in the recessed areas. This is a nicely defined and minimally abraded piece. Population: 2 in 53, 14 finer (5/09).
From The Kiawah Collection. (#8322)

- 1591 1871-CC VF30 NGC.** Variety 1-A. A scarce issue from the early years of the Carson City Mint. This orange-gold example actually shows quite a bit of luster remaining, although Liberty's hair and forehead display wear. Moderately abraded near the jaw, and the fields have occasional thin marks.
Ex: The Steve Glenn Collection (Heritage, 4/2006), lot 2779.
From The Kiawah Collection. (#8323)

- 1592 1871-S XF45 NGC.** Orange-gold surfaces exhibit traces of luster in the protected areas, more so on the reverse. This well defined piece reveals scattered light marks. (#8324)

Luminous 1871-S Half Eagle, AU50

- 1593 1871-S AU50 NGC.** Despite its mintage of 25,000 pieces, the 1871-S half eagle, like almost all the other San Francisco half eagles of the decade, is elusive in any grade. This lightly worn yellow-gold example, which possesses a strike worthy of the Dahlonega Mint, has wheat accents and traces of luster associated with the luminous surfaces. Aside from the usual handling marks, this piece has a distinctive sinusoidal flaw that crosses the lower bust. Census: 10 in 50, 48 finer (5/09).
From The Kiawah Collection. (#8324)

Attractive 1872 Five Dollar, AU53 Low-Mintage Gold Rarity

- 1594 1872 AU53 PCGS.** The 1872 has an amazingly small mintage of 1,660 circulation strikes, one of the lowest of any Liberty Head half eagle. The date is rare in all grades. Partially prooflike fields establish mild contrast with the well struck motifs on this AU53 specimen, and apricot-gold surfaces reveal minute marks. This is an exceedingly attractive piece. Population: 8 in 53, 9 finer (5/09).
From The Kiawah Collection. (#8325)

Scarce 1872-CC Five Dollar, VF25

- 1595 1872-CC VF25 PCGS.** This date heavily circulated in the channels of commerce, and most known examples are heavily worn. Variegated peach-gold and mint-green colors adorn both sides of this VF25 example, the design elements of which retain fairly nice detail. The few scattered marks are consistent with a moderately circulated coin. This is one of the scarcer half eagles from the Carson City Mint.
From The Kiawah Collection. (#8326)

Important AU 1872-CC Half Eagle

- 1596 1872-CC AU50 PCGS.** In his 2003 work *The Mint on Carson Street*, Rusty Goe wrote: "At the turn of the 21st century, the 1872-CC is the only date in the Carson City half eagle series that has not had a specimen graded in Mint State condition by either PCGS or NGC." That still holds true, which makes AU coins such as the present piece all the more important (5/09). Though it is lightly worn across the high points with scattered minor abrasions on each side, its pale wheat-gold surfaces retain considerable radiance, and its eye appeal is winning. Strongly attractive and potentially underrated. Population: 8 in 50, 12 finer (5/09). (#8326)

Seldom Seen 1872-S Half Eagle, AU53

- 1597 1872-S AU53 NGC.** Bright tan luster dominates the reverse periphery and fills the plumage and hair. Void of detrimental marks, and the strike is good despite the usual incompleteness of the eagle's neck and fletchings. Just 36,400 pieces were struck. Census: 16 in 53, 27 finer (5/09).
From The Kiawah Collection. (#8327)

Important AU55 1872-S Half Eagle

- 1598 1872-S AU55 PCGS. CAC.** Garrett and Guth write in their *Encyclopedia of U.S. Gold Coins*: "The issue is another of the very heavily circulated dates, with few high-grade survivors." With just six coins graded AU55 by PCGS and none finer (5/09), this is an important representative. The strike is pleasing overall, if a trifle soft at the hair near Liberty's brow, and the light yellow-gold surfaces retain considerable luster. (#8327)

Elusive Choice AU 1872-S Five

- 1599 1872-S AU55 NGC.** Traces of luster adhere to the honey-gold and mint-green surfaces of this Choice AU S-mint representative. The design elements exhibit sharp definition, though the eagle's neck feathers are a touch soft. Minute marks are scattered about, more so on the obverse. Census: 19 in 55, 8 finer (6/09). (#8327)
- 1600 1873 Closed 3 MS62 NGC.** This copper-gold example has ample peripheral luster, a decent strike, and modest field marks for the grade. The 2009 *Guide Book* Closed 3 mintage of 112,480 pieces is incorrect, since the figure excludes the Open 3 production and quotes a separate mintage figure of 112,505 coins for the Open 3 variety. In reality, both date styles account for a portion of the total mintage of 112,480 pieces, with the Closed 3 the rarer of the two. Census: 20 in 62, 6 finer (5/09).
From The Kiawah Collection. (#8329)

Wonderful 1873-CC Half Eagle, Fine 15

- 1601 1873-CC Fine 15 NGC.** Despite rather extensive wear, this is a wonderful 1873-CC half eagle with smooth yellow-gold surfaces. A few light abrasions on each side are of no consequence to its overall appearance. Just 7,416 pieces were coined, an extremely low mintage for the denomination. Most survivors are damaged or cleaned, making this problem-free piece especially desirable.
From The Kiawah Collection. (#8331)

- 1602 1873-S XF45 NGC.** Pumpkin-orange patina is seen over both sides of this lightly abraded piece, which shows hints of luster in the protected areas. Even in Extremely Fine condition the 1873-S half eagle is scarce, as a look at the population data indicates. Census: 30 in 45, 45 finer (6/09). (#8332)

- 1603 1873-S AU50 NGC.** A surprising amount of mint luster illuminates the borders and devices of this lightly circulated rare date half eagle. Relatively smooth for the grade and type, since no marks merit individual mention. All 31,000 pieces struck were apparently from the Closed 3 date logotype. (#8332)

Desirable 1873-S Half Eagle, AU53

- 1604 1873-S AU53 NGC.** A desirable example with considerable luster on each side. The surfaces are lightly abraded as expected but retain full yellow brilliance. Some dusky discoloration is evident on the reverse. Most 1873-S half eagles saw extensive circulation in the Old West. Census: 14 in 53, 16 finer (5/09).
From The Kiawah Collection. (#8332)

- 1605 1874 AU53 PCGS.** In this year when small-denomination gold production in Philadelphia was more focused on the gold dollars and three dollar pieces, just 3,488 half eagles were minted for commercial purposes. This is a bright yellow-gold example with much of its semireflective luster still in evidence. Contact marks are well scattered and none are individually distracting. Population: 8 in 53, 18 finer (5/09).
From The Kiawah Collection. (#8333)

Attractive 1874-CC Half Eagle, XF45

1606 1874-CC XF45 NGC. Well detailed for the grade, this Choice XF example actually offers better-than-expected definition on the reverse, where the degree of wear seems more consistent with an AU designation. Several pronounced “spikes,” or heavy die lines, are evident between the eagle’s beak and the top of the left (facing) wing. The coin has a nice overall appearance, with mild satiny luster remnants on each side. Census: 26 in 45, 53 finer (5/09).
From The Kiawah Collection. (#8334)

1607 1874-S XF45 NGC. The 1874-S half eagle is even more challenging than its small mintage of only 16,000 pieces would imply; neither major service has certified a single Mint State example. This is a moderately abraded reddish-golden specimen with a normally weak mintmark. A number of small field abrasions do not appreciably detract. One dark spot is mentioned near star 1 in the obverse field. Census: 8 in 45, 40 finer (5/09).
From The Kiawah Collection. (#8335)

1608 1875-CC VF20 NGC. A glossy piece with a typical strike and noticeable traces of luster. The obverse has a pair of pinpricks and a solitary wispy pinscratch. Another difficult issue from Carson City; only 11,828 pieces were struck.
Ex: Stack’s (10/1979), lot 186.
From The Kiawah Collection. (#8337)

1609 1875-S XF45 NGC. This khaki-green piece has a subdued appearance, but there is plenty of remaining design detail for the Choice XF grade level. Just a few wispy marks are evident on each side. Just 9,000 pieces were produced, and minimally worn examples are quite scarce. Census: 7 in 45, 28 finer (5/09).
From The Kiawah Collection. (#8338)

1610 1876-CC VF20 NGC. A well worn representative of this rare Carson City issue; all legends are clear, although Liberty’s hair is mostly smooth. Faint contact marks are present, but they detract little from the overall eye appeal. An affordable opportunity to obtain rare-date Carson City gold.
From The Kiawah Collection. (#8340)

Very Rare 1876-S Five, VF30 Low-Mintage Centennial Issue

1611 1876-S VF30 NGC. Lovely medium gold surfaces with far fewer than the usual quota of marks expected for the grade. Only 4,000 examples were minted of this Centennial issue, an extremely low mintage for any San Francisco gold half eagle. This date is rare in all grades. For example, NGC has only certified 16 pieces finer than this VF30 (5/09). The single example in the Smithsonian Institution grades just VG10.
From The Kiawah Collection. (#8341)

1612 1877-CC VF20 NGC. This unblemished and slightly subdued canary-gold Carson City example is from a low mintage of just 8,680 pieces. The wings display much plumage detail, and all letters in the motto are bold.
Ex: FUN Signature (Heritage, 1/2008), lot 4293, which realized \$2,070.
From The Kiawah Collection. (#8343)

1613 1877-S AU53 NGC. This still-lustrous straw-gold example, one of just 26,700 pieces coined, offers excellent visual appeal. Well struck with small, scattered marks and just a touch of wear on the central devices. Census: 13 in 53, 32 finer (6/09).
From The Bay State Collection, Part One. (#8344)

1614 1878 MS63 NGC. Delightful lime-green and pink-rose toning is illuminated by shimmering luster on both sides of this Select Mint State half eagle. Well struck and nicely preserved, although a noticeable abrasion above the eagle’s head limits the grade. Census: 18 in 63, 17 finer (5/09).
From The Kiawah Collection. (#8345)

1615 1879 MS63 NGC. A radiant peach-gold example that boasts a bold strike and dazzling luster. Minor marks are chiefly limited to the field beneath the hair bun. A scarce issue in Select condition, relative to its high-mintage 1880 to 1882 successors. Census: 24 in 63, 22 finer (5/09).
From The Kiawah Collection. (#8348)

1616 1879-CC XF45 NGC. This straw-gold Choice XF example has noticeable luster and the usual minor bluntness on the curls and plumage. Abrasions are trivial, save for a hair-thin line above the eye and a brief mark on the cheek. A challenging Carson City issue that has a tiny production of 17,281 pieces.
From The Kiawah Collection. (#8349)

1617 1880-CC AU53 PCGS. Though the 1880-CC half eagle is more generally available than its 1870s counterparts, it is nonetheless challenging in About Uncirculated and finer grades. This briefly circulated representative is uncommonly well-defined, with pleasing peripheral luster and elements of peach and orange that enliven its dusky yellow-gold surfaces. Population: 16 in 53, 51 finer (5/09).
From The Kiawah Collection. (#8352)

1618 1881/0 MS62 PCGS. CAC. FS-301, formerly FS-005. More properly an 1881/1880, since traces of the initially entered 188 are also faintly visible. The 1881 is common, but the overdate is very scarce in Mint State. Sharply struck and lustrous, with lime-green margins that surround orange-red fields and devices. Certified in a green label holder. Population: 16 in 62, 18 finer (1/09).
From The Kiawah Collection. (#8355)

1619 1881-CC XF40 PCGS. Faintly lustrous yellow-orange surfaces show an alloy streak on the reverse from the A in STATES to the top of the eagle’s head. Lightly worn with few overt marks. Population: 13 in 40, 33 finer (5/09).
From The Kiawah Collection. (#8356)

1620 1882-CC AU53 NGC. Luminous yellow-orange surfaces show hints of dusky wheat color. Though this coin shows evidence of brief circulation, only pinpoint marks appear on each side.
From The Kiawah Collection. (#8359)

1621 1883-CC XF45 NGC. Faintly lustrous in the fields with pale canary-gold color prevailing. The obverse is well-defined, though the reverse shows softness on the eagle’s neck that blends with the wear.
From The Kiawah Collection. (#8362)

Difficult 1883-S Select Half Eagle

- 1622 1883-S MS63 PCGS.** This is a brilliant greenish-gold example with frosty luster and sharply struck design features. A linear abrasion is noted in the left obverse field, but no other significant marks are visible on either side. This is an extremely important opportunity to acquire a difficult date from the small mintage of 83,200 coins, and in the highest grade most collectors will ever see. Population: 13 in 63, 3 finer (5/09).
From The Kiawah Collection. (#8363)
- 1623 1884-CC XF45 NGC.** Though wear is plain across the devices, the yellow-gold fields remain surprisingly radiant. Minor abrasions dot each side but have little impact on the eye appeal.
From The Kiawah Collection. (#8365)
- 1624 1885-S MS64 ★ NGC.** Sharply struck with vibrantly lustrous yellow-orange surfaces. Remarkably appealing with only a few shallow, scattered marks in the fields precluding Gem status. (#8368)
- 1625 1887-S MS64 NGC.** Strongly lustrous yellow-gold surfaces show honey overtones. This crisply impressed near-Gem has just a few small marks, mostly near the rims. NGC has graded six finer pieces (5/09). (#8371)
- 1626 1889 MS61 NGC.** Sharply struck with bright and shining luster. The canary-gold surfaces have a number of fine, scattered marks, but the overall eye appeal holds up well. Census: 25 in 61, 26 finer (5/09).
From The Kiawah Collection. (#8374)
- 1627 1890 MS60 NGC.** A mere 4,240 half eagles were struck for circulation in 1890. Unsurprisingly, Mint State survivors are few and far between. This relatively smooth example displays ample peach luster, while the fields and portrait are olive-gold. Census: 2 in 60, 17 finer (5/09).
Ex: Central States Signature (Heritage, 4/2006), lot 2817, which realized \$1,955.
From The Kiawah Collection. (#8375)
- 1628 1890-CC MS61 NGC.** Sharply struck with bright straw-gold luster. Though a few faint marks are visible on each side, the eye appeal is strong for the MS61 designation.
From The Kiawah Collection. (#8376)
- 1629 1890-CC MS62 ICG.** The 1890-CC half eagle is readily available through the MS61 grade level but becomes more difficult to locate in MS62. The issue is rare any finer (Douglas Winter, 2001). Yellow-gold and apricot surfaces are imbued with traces of mint-green. The design elements are generally well struck, except for the usual softness in the hair curls around Liberty's ear and the eagle's neck feathers and adjacent horizontal shield lines. A scattering of light marks results in occasional interruptions in the luster flow. (#8376)

Select Uncirculated 1890-CC Half Eagle

- 1630 1890-CC MS63 PCGS.** A satiny, shimmering example showing lovely wheat-gold and mint-green toning. Sharply struck on all of the obverse design details, with just a bit of weakness noted on the eagle's right (facing) talons and arrow fletchings on the lower reverse. Scattered trivial marks limit the grade of this attractive, Select specimen. Population: 28 in 63, 31 finer (6/09). (#8376)
- 1631 1891 MS63 NGC.** This better date, low mintage Motto five has good luster and a crisp strike. The reverse on its own has claims to a higher grade, while the obverse is only held back by minor grazes. Struck from boldly clashed dies. Census: 35 in 63, 17 finer (5/09).
From The Kiawah Collection. (#8377)
- 1632 1891-CC MS62 PCGS.** A charming Carson City gold type coin that has good luster and rich, original peach-gold toning. Sharply struck, and although small marks are scattered, none merit singular discussion. (#8378)
- 1633 1891-CC MS62 PCGS.** A strongly struck example of this popular Carson City half eagle issue with hints of green-gold and tan against a yellow base. Modestly abraded for the grade with strong eye appeal.
From The Kiawah Collection. (#8378)

Superlative 1892-CC Five Dollar, MS62

- 1634 1892-CC MS62 PCGS.** The present MS62 half eagle boasts superlative eye appeal that is a combination of nice luster, lovely orange-gold patina, and a good strike. Light, grade-consistent abrasions appear under a loupe. Mint State examples of this issue are scarce through the Select level and extremely rare any finer. Population: 22 in 62, 13 finer (5/09).
From The Kiawah Collection. (#8380)

Eye-Catching 1892-CC Half Eagle, MS63

- 1635 1892-CC MS63 PCGS. CAC.** Accents of rose color in the periphery mix with the delightful yellow-gold patina that covers the center of each side. The hair above Liberty's ear is a trifle soft, but the rest of this coin is powerfully impressed. Sparkling luster gives this piece outstanding eye appeal. Population: 15 in 63, 0 finer (6/09). (#8380)

- 1636 1892-S MS63 PCGS.** Most coins of this issue were heavily circulated, and today the 1892-S is conditionally rare at Select and better levels. This MS63 coin displays bright brass-gold luster and exquisitely impressed design features. Only a few minor surface marks preclude an even finer designation. Population: 21 in 63, 6 finer (5/09). *From The Kiawah Collection.*(#8382)

Interesting MS64 ★ 1892-S Half Eagle

- 1637 1892-S MS64 ★ NGC. CAC.** The mintmark appears repunched, and there is a faint outline of the earlier "S" just east of its current location. Such a variety is unlisted in Breen (1988). The vast majority of 1892-S half eagles saw extensive circulation; Mint State specimens are scarce. Choice examples are decidedly rare, while better examples are virtually impossible to find. This deep yellow coin boasts a strong strike and highly reflective fields. An interesting piece for the specialist. Census: 5 in 64, 1 finer (6/09). (#8382)

- 1638 1893 MS65 NGC.** With a mintage of over 1.5 million pieces, it is unsurprising that a number of high-grade 1893 fives have survived to the present day, though Gems are conditionally scarce. This satiny orange-gold example exhibits crisp detail on the well-preserved portrait. NGC has graded just nine coins finer (2/09). (#8383)

- 1639 1893-CC MS61 NGC.** Rich sun-gold and yellow-orange color enlivens this highly lustrous final-year Carson City five. Crisply detailed with remarkable eye appeal for the grade. *From The Kiawah Collection.*(#8384)

- 1640 1893-O MS62 NGC.** A lustrous and evenly struck representative that has full luster and good eye appeal. The 1893-O is one of just three New Orleans Motto Liberty half eagle issues. NGC has graded only 11 finer examples (5/09). *From The Kiawah Collection.*(#8385)

- 1641 1893-S MS64 NGC.** Crisply detailed with warm and inviting luster. Yellow-gold, peach, and orange elements mingle on each side of this well-preserved near-Gem. Census: 26 in 64, 6 finer (5/09). *From The Kiawah Collection.*(#8386)

- 1642 1894-O MS61 NGC.** Lovely lemon-gold luster dominates the eye appeal of this later O-mint five. Pleasing central detail with minor, scattered abrasions. Census: 59 in 61, 15 finer (5/09). *From The Kiawah Collection.*(#8388)

- 1643 1894-S MS61 PCGS.** The 1894-S is scarce in any grade, and survivors are typically well circulated. This brassy-gold specimen displays hints of light green and red, with subdued luster and well struck design elements. A few light marks appear on each side. Population: 4 in 61, 7 finer (5/09). *From The Kiawah Collection.*(#8389)

- 1644 1895-S MS61 NGC.** The 1895-S is a lower mintage issue with few high grade examples known today. Apparently, most entered circulation shortly after minting, as the majority of survivors are in the XF-low AU grade range. This is one of the few Uncirculated pieces known. Lightly abraded for the most part; the only significant mark is in the right obverse field behind Liberty's neck. An apricot-gold rarity with vibrant luster throughout the borders. Census: 12 in 61, 8 finer (5/09). *Ex: Milwaukee ANA Signature (Heritage, 8/2007), lot 3098, which realized \$2,530.* *From The Kiawah Collection.*(#8391)

- 1645 1899 MS65 NGC.** The 1899 half eagle is a common date in the Liberty Head series, although examples at the MS65 level become more difficult to locate. Flashy luster exudes from both sides of this honey-gold Gem, and each is sharply impressed. Trivial grade-consistent marks do not detract. A wonderful representative for a high-grade type collection.(#8398)

- 1646 1899 MS65 NGC.** A sharply struck and brightly lustrous Gem with slightly satiny texture on rich yellow-gold surfaces. Impressively preserved with great eye appeal.(#8398)

- 1647 1900 MS64 PCGS.** Exquisitely detailed with strong luster on each side that takes up a hint of satin on the peach-gold obverse. The reverse assumes deeper sun-yellow color.(#8400)

- 1648 1901/0-S MS64 NGC.** FS-301, formerly FS-006. The upper part of the second 0 is visible to the unaided eye and plain with magnification. Modest abrasions on the cheek keep this lustrous and nicely struck orange-gold piece out of the Gem category. *From The Kiawah Collection.*(#8403)

Exciting 1901-S Premium Gem Half Eagle

- 1649 1901-S MS66 PCGS.** While the 1901-S is readily available in most grades, it is scarce in Premium Gem condition and rarely seen any finer. Magnificent satiny luster glimmers throughout the deep yellow surfaces. The strike is needle-sharp, and there are only a few nearly imperceptible abrasions. Population: 41 in 66, 2 finer (6/09). (#8404)

Elusive Premium Gem 1902 Half Eagle

- 1650 1902 MS66 NGC.** This Premium Gem is highly lustrous and well struck, with lovely yellow-gold coloration. Exceptional surface preservation leaves the piece with only the most trivial nicks and luster grazes on either side. This is not a rare date overall, but it is extremely scarce at the current grade level and virtually unobtainable any finer. Census: 5 in 66, 2 finer (6/09). (#8405)

- 1651 1903 MS64 PCGS.** Orange-gold luster radiates from both sides of this near-Gem five dollar, each of which exhibits sharply struck design elements. Gem classification is denied by a few minor marks. Housed in a green label holder. Population: 58 in 64, 25 finer (5/09). (#8407)

Charming 1904-S Select Half Eagle

- 1652 1904-S MS63 PCGS.** Even with a mintage of 97,000 pieces, the 1904-S proves to be an elusive coin in all Mint State grades. This charming piece shows richly lustrous yellow-gold surfaces free of all but the tiniest abrasions. Sharply struck and a nice example for the grade. Population: 11 in 63, 9 finer (5/09).
From The Kiawah Collection. (#8410)

Attractive MS64 1904-S Half Eagle

- 1653 1904-S MS64 NGC.** Only 97,000 examples of this issue were coined—a significant drop from the levels of the previous few years—and Gem examples are unsurprisingly elusive. This splendid near-Gem example offers radiant luster over lovely orange-gold surfaces. The strike is quite close to full, as expected on S-mint productions of the era. It is perhaps only a hair-thin mark on Liberty's cheek that prevents an even finer grade, but the eye appeal is considerable. Census: 6 in 64, 3 finer (6/09). (#8410)

Entrancing 1905 Liberty Half Eagle MS66

- 1654 1905 MS66 PCGS.** This canary-gold representative has dynamic cartwheel luster and a virtually pristine reverse. The left obverse has just a few faint grazes, and the strike shows only minor incompleteness on the claws and a few stars. Available in MS61 to MS63, the 1905 is a rarity in the present lofty grade. Population: 10 in 66, 0 finer (5/09). (#8411)

Pleasing 1905-S Five Dollar, MS64

- 1655 1905-S MS64 PCGS.** Most of the production of the 1905-S was apparently released into West Coast circulation, since the issue is scarce in Mint State and a rarity at the MS64 level. Only occasional minuscule grazes separate this crisply struck and lustrous yellow-gold example from status as a full-fledged Gem. Population: 23 in 64, 4 finer (5/09).
From The Kiawah Collection. (#8412)

- 1656 1906-S MS64 NGC.** Boldly struck and with exemplary luster, this apricot-gold near-Gem is limited in grade only by a pair of short pin scratches beneath the eagle's wings. Census: 21 in 64, 12 finer (5/09).
From The Kiawah Collection. (#8415)

Dynamic MS67 1907 Half Eagle

- 1657 1907 MS67 NGC.** From an initial mintage of 626,100 pieces, the 1907 half eagle is one of the more available dates of the Liberty Head series, but at the MS67 level, it too is a rarity. Vibrant luster radiates from the flawless green-gold surfaces of this Superb Gem. The devices are frosty and fully detailed, with fully separated hair strands, crisp star centrils, and distinct individual stripes and bars in the shield. The stunning overall eye appeal makes this piece unforgettable. Census: 7 in 67, 2 finer (5/09). (#8416)

INDIAN HALF EAGLES

- 1658 1908-D MS63 NGC.** Brass-gold color envelops this lustrous Select five dollar piece and an impressive strike imparts strong detail to the devices, save for minor softness on the eagle's shoulder. A hair-thin mark is visible behind the eagle's neck. (#8511)
- 1659 1908-D MS64 NGC.** Regardless of date, the Indian half eagles are elusive in MS64 or finer grade. In fact, NGC has only certified four higher grade examples of this issue. The frosty surfaces are brilliant and lustrous with excellent eye appeal. (#8511)
- 1660 1908-D MS64 NGC.** Pleasing luster highlights the lemon-yellow patina that graces both sides. The surfaces possess only light abrasions, and the design is boldly impressed. The 1908-D is rare in grades higher than the present coin. An excellent example from the first year of this popular series. (#8511)
- 1661 1908-S MS61 PCGS.** Well detailed with fine satiny luster, even apricot-gold color, and few surface marks. Rather plentiful but always in demand.
From The Kiawah Collection. (#8512)

Scarce 1908-S Indian Half Eagle, MS62

- 1662 1908-S MS62 PCGS.** A well struck apricot-gold example of this better-date Indian half eagle. Uncirculated survivors are even scarcer than the mintage of 82,000 pieces would suggest. A few tiny ticks near the mouth and a thin mark above the olive branch limit the grade. In a green label holder. (#8512)
- 1663 1909 MS63 PCGS.** Well struck overall with bold yellow-orange luster. The obverse has a clean appearance for a Select coin, though light, scattered marks appear in the reverse fields.
From The Kiawah Collection. (#8513)

Pleasing Choice Mint State 1909 Half Eagle

- 1664 1909 MS64 PCGS.** Satiny luster radiates from the attractive yellow-gold surfaces. The top of the eagle's wing is softly struck, as typically seen, but the rest of the motifs are well-defined. This carefully preserved specimen has excellent eye appeal and would make a great type coin. (#8513)
- 1665 1909-D MS64 NGC.** Although common in most grades, the number of certified 1909-D half eagles drops precipitously in grades higher than Choice Mint State. Flashy luster radiates from the yellow-orange surfaces of this crisply struck example. Peppered abrasions limit the grade, but none are of any consequence. (#8514)

- 1666 1909-D MS64 NGC.** Glittering luster is seen over the bright yellow surfaces of this well-preserved representative. The strike is needle-sharp save for a hint of softness on the eagle's feathers. A number of minuscule abrasions keep this piece from an elusive Gem Uncirculated grade. NGC has certified 64 pieces finer (6/09). (#8514)

- 1667 1909-D MS64 NGC.** A meticulously struck Choice gold type coin, primarily apricot-gold although traces of olive are seen on the obverse center. The obverse is well preserved, and the reverse has only infrequent unimportant marks. (#8514)

Elusive Choice XF 1909-O Half Eagle

- 1668 1909-O XF45 NGC.** The collector of circulated Indian gold is well aware of how elusive certain key issues are in grades below AU, and the 1909-O half eagle is no exception. This Choice XF survivor thus takes on special importance. Antique-gold fields remain softly lustrous, while deeper toning dominates the lines of the recessed devices, starkly outlining the remaining detail. (#8515)

Key 1909-O Indian Half Eagle, XF45

- 1669 1909-O XF45 PCGS.** Per Jeff Garrett and Ron Guth, writing in the *Encyclopedia of U.S. Gold Coins*: "This is one of the most sought-after issues in the series because of the low mintage and general rarity in any Mint State grade. It has long been considered a key date and is always in feverish demand." This example shows a coating of deep copper-red coloration across each side. It is well detailed for the grade and free of any troublesome abrasions.
From The Kiawah Collection. (#8515)

Hard-to-Find 1909-O Indian Five AU53

- 1670 1909-O AU53 NGC.** The New Orleans Mint struck silver coins of all denominations in great quantity during its final three decades of operation. Gold issues had much lower mintages, and were usually ten dollar coins. The '79-O twenty is an exception, as are the '92-O through '94-O half eagles. It is curious, then, that New Orleans would issue a half eagle in 1909, its final year of operation. The lowest mintage of the series at 34,200 pieces, the 1909-O is also the key date in Mint State grades. This example has light highpoint wear and a few minor marks, but will delight the collector long in search of this challenging issue. (#8515)

Appealing AU55 1909-O Half Eagle

- 1671 1909-O AU55 NGC.** An attractive, lightly circulated representative of the lowest-mintage Indian half eagle issue, also one of the last coins struck at the New Orleans Mint. Pink-tinged yellow-orange surfaces retain considerable luminosity, and though a number of small marks are present on each side, none merit singular mention. (#8515)
- 1672 1909-S MS61 NGC.** Rich sun-yellow color with elements of peach in parts of the fields. Faintly abraded overall but attractively lustrous and appealing.
From The Kiawah Collection. (#8516)
- 1673 1909-S MS61 PCGS.** A minimally abraded and satiny golden-tan example. All San Francisco Mint Indian fives are conditionally challenging, even the high mintage 1911-S. Gold coins circulated to some extent on the West Coast before World War I, a lingering vestige of the region's hard-money tradition. (#8516)
- 1674 1909-S MS61 ICG.** The 1909-S is challenging in Mint State despite the mintage of nearly 300,000 pieces. The bright surfaces of this MS61 specimen yield attractive yellow-gold color and relatively well struck design elements. A few minute marks are visible, especially in the raised, exposed fields. (#8516)

Amazing MS66 1910 Half Eagle

- 1675 1910 MS66 NGC.** All Indian half eagles are extremely rare in MS66 or finer grades, with no exceptions. The three MS66 NGC examples of the 1910 half eagle are the only three so graded, since PCGS has assigned only Gem and lesser designations (5/09). This incredible Premium Gem is frosty and brilliant, with lovely lemon-yellow luster and only a few trivial surface marks. Both sides are boldly detailed, and the aesthetic appeal is second to none. A gorgeous survivor that offers the potential for a Registry collection trump but also could be appreciated just as easily outside its holder. (#8517)

Lovely 1910-D Half Eagle, MS63

- 1676 1910-D MS63 NGC.** The 1910-D is a scarcer date, particularly in the middle Uncirculated grades. This example has a lovely reddish tint in the margins that intermingles with the yellow patina that covers the centers. Pleasing luster complements a bold strike. NGC has certified a mere 10 pieces finer (6/09). (#8518)

- 1677 1910-S MS61 NGC.** Well struck overall with rich golden-brown patina and abraded but otherwise problem-free surfaces. The mintmark is softly defined but legible.
From The Kiawah Collection. (#8519)

Seldom-Offered MS65 1911 Half Eagle

- 1678 1911 MS65 NGC.** Although its mintage of 915,000 pieces might suggest otherwise, the 1911 is seldom offered in Gem condition, and it is likely the population data represents multiple submissions of the same coins. Many collectors may never have an opportunity to see an MS66 specimen, considering that only two examples have been certified as such by NGC and PCGS combined (6/09).

The present piece would suit even the most selective numismatist. Majestic satiny luster radiates beneath the delightful apricot-gold patina. The surfaces are quite smooth, with no detracting marks. A few areas show slight weakness, but the strike is above-average overall for the issue. An appealing example of this condition rarity. (#8520)

- 1679 1911-D AU58 NGC.** Pale yellow-orange color with largely intact luster gracing faintly abraded fields. Light rub is most visible at the top of the eagle's wing. A lightly circulated example of this key issue.
From The Kiawah Collection. (#8521)

- 1680 1911-S MS62 NGC.** Pale straw-gold color with bright and brassy luster. Well struck overall with several abrasions, including one that passes below the chin.
From The Kiawah Collection. (#8522)

- 1681 1911-S MS62 PCGS.** An original orange-gold representative of this conditionally elusive S-mint Indian five. The fields are relatively unabraded, and careful examination is required to locate the shallow graze from the mouth to the cheek. (#8522)

- 1682 1912 MS63 PCGS.** This richly colored, orange-gold representative is bold in striking definition. Slightly subdued luster, rather than a decent number of abrasions, seems to preclude a Choice designation, but the eye appeal is strong for the MS63 level.
From The Kiawah Collection. (#8523)

- 1683 1912-S MS61 NGC.** Both sides exhibit a natural, frosty appearance with pale violet accents. Softly impressed on the mintmark, as usual for this San Francisco issue, but well struck elsewhere.
From The Kiawah Collection. (#8524)

- 1684 1913 MS63 PCGS.** Rich yellow-gold luster shows hints of orange. An appealing Select representative of this popular type issue, well-defined and minimally marked.
From The Kiawah Collection. (#8525)

Lustrous 1913-S Five, MS61

- 1685 1913-S MS61 NGC.** Sharply struck with full luster and a few scattered abrasions in the fields. The mintmark is a bit mushy but unmistakable. This popular San Francisco issue had a mintage of 408,000 coins, fairly significant for the series, yet true Mint State examples are infrequently encountered.
From The Kiawah Collection. (#8526)

- 1686 1914 MS63 NGC.** This piece boasts terrific luster and has a near-Gem appearance on the yellow obverse, but several shallow abrasions in the right reverse field account for the grade. Still, a pleasing Select coin.
From The Kiawah Collection. (#8527)

- 1687 1914-D MS63 NGC.** Well-defined with color that ranges from rich sun-yellow to gold-orange. Minor abrasions are noted on the portrait and in the fields, but the eye appeal is strong.
From The Kiawah Collection. (#8528)

- 1688 1914-S MS61 NGC.** Pale straw-gold color overall with occasional glimpses of sun-yellow. Boldly impressed with fewer abrasions than one might expect for the MS61 designation.
From The Kiawah Collection. (#8529)

Attractive 1914-S Indian Five, MS62

1689 1914-S MS62 PCGS. A perusal of the population data indicates that 1914-S half eagles are difficult to locate above the MS62 grade level. This can perhaps be attributed, at least in part, to what Jeff Garrett and Ron Guth (2006) assert: "... the luster tends to be muted and the eye appeal challenged." The present example exhibits soft luster and well defined devices and has an attractive peach-gold layer over both sides. Contact marks on the Indian's portrait and in the raised, exposed fields appear to be the grade-limiting factor. Rather nice overall appeal. PCGS has only certified 24 finer examples (5/09). (#8529)

1690 1915 MS63 PCGS. This Select Mint State half eagle is a splendid example of the design, featuring satiny yellow surfaces with hints of rose and light blue toning. (#8530)

1691 1915 MS63 NGC. Gleaming sun-yellow on the obverse with orange overtones on the reverse. A well struck example with few overt abrasions, though a handful of ticks are noted on the portrait. *From The Kiawah Collection.* (#8530)

Delightful 1915 Half Eagle, Choice Mint State

1692 1915 MS64 NGC. Satiny luster radiates from the light yellow surfaces. The strike is solid, with minimal weakness on the centers of each side. This lightly abraded near-Gem representative has excellent eye appeal. NGC has certified only 36 pieces finer, with PCGS reporting a similar figure (6/09). (#8530)

Pleasing MS64 1915 Half Eagle

1693 1915 MS64 NGC. This attractive yellow-gold specimen is nearly fully struck and displays impressive luster throughout the fields. Both sides are well-preserved, with only inconsequential grazes. The 1915 is difficult to locate in grades finer than Choice Uncirculated, and Gem examples command considerable prices. (#8530)

1694 1915-S MS60 NGC. While 164,000 1915-S half eagles were coined, most entered circulation and quickly wore down, a situation exacerbated by soft strikes. By contrast, this unworn example is well struck with softly lustrous yellow-orange surfaces that show alloy spots at the margins and scattered light to moderate abrasions. *From The Kiawah Collection.* (#8531)

Elusive 1915-S Half Eagle, MS62

1695 1915-S MS62 PCGS. The 1915-S half eagle, minted to the extent of only 164,000 pieces, is elusive in all grades and especially Mint State, where NGC and PCGS report about 270 coins. Just 35 Select pieces have been seen, and fewer than 20 near-Gems. The finest certified 1915-S half eagle is a solitary MS65 NGC coin. Honey-gold surfaces yield satiny luster on this MS62 piece, and sharp definition is apparent on the design elements. Several minute but grade-defining marks are visible on both sides. Population: 73 in 62, 32 finer (5/09). (#8531)

1696 1916-S MS62 PCGS. The last circulating half eagle struck at San Francisco, the 1916-S becomes elusive in MS62 and above. This light yellow-orange example is well struck with wispy abrasions around the eagle's head. *From The Kiawah Collection.* (#8532)

1697 1916-S MS62 PCGS. After the 1916-S half eagle issue, 90 years would pass before San Francisco struck the denomination again. This well-defined piece has lightly abraded yellow-orange surfaces that display above-average luster. (#8532)

Desirable Gem 1916-S Indian Five

- 1698** 1916-S MS65 NGC. CAC. San Francisco Indian half eagles are known for their difficulty to locate in quality Mint State. Even the 1911-S, which has a mintage of 1.416 million coins, is very rare as a Gem. The 1916-S was the final branch mint issue of the series, and much of the mintage may have been melted by the Treasury, although to a degree less than the 1920-S ten and twenty. The present beautiful, shimmering representative is unlike the lackluster '16-S usually encountered. Apricot-gold throughout save for an area of subtle gray beneath the TY in LIBERTY. Evenly struck and attractive. Census: 9 in 65, 2 finer (6/09). (#8532)
-

EARLY EAGLES

AU Sharpness 1795 Ten Dollar 13 Leaves, BD-5

- 1699** 1795 13 Leaves—Improperly Cleaned—NCS. AU Details. Breen-6830, Taraszk-5, BD-5, R.5. The final of five die marriages from the first year of the denomination, 1795. The die lump at 2 o'clock on the reverse is now larger. A bold example with ample luster in design recesses. A few mint-made adjustment marks are noted near the RTY in LIBERTY and behind Liberty's ear. The reverse rim has a minor ding at 11 o'clock and is lightly filed near 2:30. A bit bright and faintly hairlined, and the fields are cloudy from cleaning. Most Small Eagle ten dollar pieces have similar problems, and all are nonetheless coveted as representatives of this rare early gold type. (#8551)
-

Lustrous 1799 Large Stars Ten, BD-10, MS62

- 1700** 1799 Large Stars Obverse MS62 PCGS. Breen-6841, Taraszka-22, BD-10, R.3. The large obverse stars are diagnostic for this obverse die, with the second 9 lightly repunched. Two reverse dies were used with the obverse, the present variety with a leaf joined to the right base of I. This variety is one of the two most plentiful die combinations in the entire early eagle series from 1795 to 1804.

This highly lustrous Mint State piece offers soft, frosty greenish-yellow surfaces. Both sides have tiny abrasions, but only a couple of marks are of any consequence. An excellent candidate for a date or type collector. Population: 32 in 62, 63 finer (5/09).

From The Kiawah Collection. (#8562)

XF Details 1800 Ten Dollar, BD-1

- 1701** 1800—Damaged—NCS. XF Details. Breen-6842, Taraszka-23, BD-1, High R.3. The only dies for the date. This is a well detailed example with ample bright luster in protected areas. Glossy and mildly bright from cleaning, and the obverse field is heavily abraded. The reverse has distributed marks, but most are individually unimportant. (#8563)

Late State 1800 BD-1 Eagle, AU58
Struck in 1801

- 1702** 1800 AU58 PCGS. Breen-6842, Taraszka-23, BD-1, High R.3. The only die combination of the date, and the reverse die was also used in 1799 and 1801. The present sale has examples of all three varieties from the single reverse die, and comparison clearly shows that the present 1800 eagle was struck after the 1801 BD-1 eagle.

The obverse has heavy cracks through the top of LIBERTY. The reverse has several die cracks, including some that appeared after the 1801 eagles were struck. They include cracks through the base of UNI, the tops of NIT, and from the tip of the stem to the border.

This lovely example has satiny green-gold surfaces with nearly full luster that is only interrupted by a trace of high point wear. The surfaces are pleasing, with minor marks that are inconsequential. Population: 21 in 58, 42 finer (5/09).

From The Kiawah Collection. (#8563)

Rare 1801 BD-1 Eagle, AU55

- 1703 1801 AU55 NGC.** Breen-6843, Taraszka-24, BD-1, R.5. The obverse has two points of star 1 close to the curl, and a single point of star 8 farther from the cap, diagnostic for this scarce die marriage. The reverse die was also used for 1799 BD-10 eagles and 1800 BD-1 eagles, the latter in early and late states with the latest examples—such as the 1800 in the present sale—struck after the 1801 eagles.

This pleasing green-gold example has satiny luster with slightly reflective surfaces. Both sides have minor marks consistent with the grade. The high points have a trace of wear with pale orange color. Only about 40 to 50 examples of this rare variety are known. *From The Kiawah Collection. (#8564)*

Outstanding 1801 Eagle, BD-2, MS62

- 1704 1801 MS62 NGC.** Breen-6843, Taraszka-25, BD-2, R.2. The attribution is not difficult, since there are only two obverses known for this year, and on the BD-2 variety star 1 is considerably farther from the lowest hair curl. Star 8 is close to the cap, and star 13 nearly touches the bust. For such a large gold coin the surfaces, at least to the naked eye, are remarkably free of abrasions, large or small. Indeed, even a loupe reveals only the expected faint ticks and abrasions. Neither the shallow mark in the right obverse field before Liberty's nose nor a couple of scrapes on the cheek can be considered significant. Radiant luster proceeds forth from both sides of this bright greenish-gold coin, unimpeded by patina.

While this issue has seen a few dozen coins certified in this grade at NGC, and about an equal number finer, there is no doubt that this specimen will become the cornerstone of a fine numismatic collection. (#8564)

Impressive Near-Mint 1804 Eagle Crosslet 4, BD-1

1705 1804 Crosslet 4 AU58 NGC. Breen-6847, Taraszka-31, BD-1, High R.4. Bass-Dannreuther Obverse State b, Reverse State b, with faint peripheral die cracks on each side. This is the only 1804-dated die pair used to strike eagles for circulation, and 1804 is the last year that appears on early eagles—but it does not follow that the 1804 Crosslet 4 eagle was the last variety struck. As Bass and Dannreuther recount in *Early U.S. Gold Coin Varieties*, “Actually, [1804] is the last date in the series but not the final coin struck for the circulation series. The reverse used for this coin ... was used after striking this date/variety for the very rare 1-E [die] combination of 1803, BD-6 ... So the mintage totals for this year, already a scant 3,757, undoubtedly include some coins dated 1803!”

Bass and Dannreuther also highlight the Plain 4 version of the 1804 eagle, struck as proofs in 1834 and possibly 1835 for inclusion in diplomatic presentation sets, though they are careful to distinguish those later proofs from their circulating Crosslet 4 counterparts. As for the Crosslet 4 BD-1 pieces, the authors estimate 80 to 100 pieces surviving, many of them impaired, which makes the issue very scarce in any state. Viewed in that context, a near-Mint coin such as the present piece becomes even more impressive. Radiant yellow-gold surfaces are lightly abraded overall with only trifling wear at the high points, though striking weakness is also present there and at several of the obverse stars. Adjustment marks are noted on Liberty's cap. Census: 14 in 58, 29 finer (5/09). (#8566)

LIBERTY EAGLES

Popular 1839 Ten Dollar, Head of 1838, XF45

- 1706 1839 Type of 1838, Large Letters XF45 NGC.** A highly popular and desirable example representing the first design type that was only produced in 1838 and 1839. The differences are distinctive enough that advanced type collectors aspire to own an example of this subtype. This lightly abraded piece has pale green-gold surfaces with violet patina in the protected areas.
From The Kiawah Collection. (#8576)

- 1707 1840 AU50 PCGS.** This underrated date is surprisingly difficult to find in higher grades, and Mint State pieces are nearly impossible to locate. Even an attractive AU like the present coin is challenging to the specialist. This lovely green-gold piece has satiny surfaces with considerable luster and reflectivity. Population: 14 in 50, 17 finer (5/09).
From The Kiawah Collection. (#8581)

- 1708 1841 AU55 NGC.** A bold and bright representative of this very scarce low mintage issue. Many small to moderate marks appear, but heavy abrasions are absent. A mere 63,131 pieces were struck, and perhaps only a few hundred have survived. Census: 28 in 55, 28 finer (5/09).
From The Kiawah Collection. (#8582)

Seldom-Seen 1841-O Ten Dollar, VF25

- 1709 1841-O VF25 PCGS.** The 1841-O ten dollar was the first date of this denomination to be struck at New Orleans. This, along with its extremely low mintage of 2,500 pieces and its overall rarity, makes it a popular date among collectors. The honey-gold surfaces of this VF25 specimen exhibit nicely defined devices and distributed minute marks. Housed in a green label holder.
From The Kiawah Collection. (#8583)

- 1710 1842 Large Date AU53 PCGS.** The crosslet 4 in the date attributes the Large Date (which is not indicated on the insert). Whispers of mint-green and violet make appearances on the yellow-gold surfaces of this well defined ten dollar. Light to moderate surface and rim marks are visible over each side. Housed in a green label holder. (#8584)

- 1711 1842 Large Date AU55 NGC.** This variety's "large" date is relative, though a side-by-side comparison shows the difference. Well struck with radiant straw-gold surfaces that show light to moderate abrasions.
From The Kiawah Collection. (#8584)

- 1712 1842-O XF45 NGC.** Dusky gold-orange surfaces retain a surprising level of luster despite light, even wear. The scattered marks on each side have minimal impact on the eye appeal. (#8587)

- 1713 1842-0XF45 PCGS.** Strong yellow luster that varies from sun to pale lemon-gold. The abrasions on this lightly worn Choice XF example are minor and scattered. Population: 30 in 45, 35 finer (5/09).
From The Kiawah Collection. (#8587)

- 1714 1842-O AU50 NGC.** Although not nearly as rare as the first eagle struck at the New Orleans Mint (the 1841-O, which had a mintage of 2,500 pieces), the 1842-O is quite scarce in high grades. Most examples were heavily circulated, and before the discovery of the *S.S. Republic* it was difficult for collectors to locate an AU example. Charming orange-gold patina embraces the lustrous and minimally marked surfaces. An evenly worn and handsome representative.
From The Kiawah Collection. (#8587)

Choice AU 1842-O No Motto Ten

- 1715 1842-O AU55 NGC.** This second-year New Orleans ten is from a low mintage of 27,400 pieces and is much scarcer than its 1843-O successor. Moderate abrasions are distributed, but none merit singular mention save for a subtle obverse rim mark at 11:30. The reverse is the die of 1841, with the mintmark relatively high and close to the lower point of the fletchings. (#8587)

- 1716 1843 AU50 PCGS.** Peach-gold surfaces are sharply defined except for the usual softness in the hair over Liberty's ear, and traces of luster reside in the protected areas. Distributed marks are noted over each side. This is a scarce date in circulated grades and nearly unobtainable in Mint State. Population: 19 in 50, 7 finer (5/09).
From The Kiawah Collection. (#8588)

- 1717 1843-O AU50 PCGS.** The yellow-gold surfaces of this O-mint eagle retain traces of luster in the recessed areas and exhibit relatively strong detail on the design elements. Light marks are evenly distributed over each side. Encapsulated in a green label holder. (#8589)

- 1718 1843-O AU53 NGC.** Rich honey-gold patina is imbued with traces of greenish-gray. Sharply struck and revealing light abrasions. (#8589)

- 1719 1843-O AU55 NGC.** This untuned New Orleans ten displays pockets of luster around its design elements. The strike is precise, apart from minor blending on the hair above the ear. Marks are relatively minor and include a thin line on the jaw and a nick on the upper reverse field.
From The Kiawah Collection. (#8589)

- 1720 1844 XF40 PCGS.** Hints of flashy yellow-gold luster remain in the fields, particularly on the reverse. This appealing XF coin is minimally abraded save for two marks near Liberty's nose and a cluster of abrasions below the eagle's left (facing) wing. Population: 6 in 40, 19 finer (5/09).
From The Kiawah Collection. (#8590)

- 1721 1844-O XF45 NGC.** Dusky orange-gold surfaces remain subtly lustrous at the margins. This Choice XF coin is faintly abraded overall, though a few lengthy marks are noted in the portrait area. (#8591)

- 1722 1844-O AU50 NGC.** A nicely detailed straw-gold New Orleans ten that lacks mentionable marks. Luster is particularly prevalent on the reverse. The mintmark is recut within the loop.
From The Kiawah Collection. (#8591)

- 1723 1844-O AU53 PCGS.** The yellow-gold surfaces of this O-mint representative possess luster in the recessed areas of the well struck design features. Light to moderate marks are visible over each side. Population: 17 in 53, 19 finer (5/09). (#8591)
- 1724 1845 AU50 NGC.** This AU eagle gives off a greenish-gold cast. A well defined piece with the expected number of distributed marks. (#8592)
- 1725 1845 AU50 NGC.** Luster outlines design recesses, and the strike is sharp for the type despite rub from brief circulation. Tiny marks are prevalent, but none distract. Only 26,153 pieces were struck. Census: 13 in 50, 53 finer (5/09).
From The Kiawah Collection. (#8592)
- 1726 1845-O AU50 PCGS.** Attractive yellow-gold luster remains in the fields of this pleasing AU piece, well struck in the centers but with softness on certain obverse stars. Scattered abrasions contribute to the grade. Population: 26 in 50, 21 finer (5/09).
From The Kiawah Collection. (#8593)
- 1727 1845-O AU53 PCGS.** The yellow-gold surfaces reveal some subtle prooflike tendencies. Well struck, and containing a scattering of inoffensive marks. Housed in a green label holder. (#8593)

Attractive 1846 Liberty Ten, AU50

- 1728 1846 AU50 NGC.** Only 20,095 eagles were coined in Philadelphia during the year, and survivors are infrequently encountered. This attractive green and honey-gold example has myriad abrasions, yet retains some prooflike luster in the closely guarded areas near the design motifs. Census: 15 in 50, 27 finer (5/09).
From The Kiawah Collection. (#8594)
- 1729 1846/5-O XF45 NGC.** A still-lustrous yellow-gold example of this enigmatic variant, well struck for the issue with light, scattered abrasions. Wear is concentrated largely at the high points.
From The Kiawah Collection. (#8596)
- 1730 1846/5-O XF45 NGC.** The *Guide Book* overdate, but unlisted as such on the third party insert, as is often the case for certified examples of this variety. A bright yellow-orange Choice XF representative that shows light, scattered abrasions. Wear is concentrated at the high points, leaving the fields radiant. Softly struck but eminently collectible.
From The Kiawah Collection. (#8596)
- 1731 1847-O AU58 NGC.** Well struck for the issue with radiant surfaces that are pale yellow-gold. Though lightly abraded, this coin shows just a hint of actual wear, this appearing at the high points.
From The Kiawah Collection. (#8598)
- 1732 1848 AU55 NGC.** Strong yellow-gold luster and above-average eye appeal, though the strike is typically soft on the stars. Minor rub on the high points accounts for the grade. (#8599)
- 1733 1848 AU58 NGC.** Luminous yellow-gold surfaces show occasional traces of orange. Scattered abrasions appear on and around the softly struck portrait, but there is little evidence of actual wear. Census: 44 in 58, 23 finer (5/09).
From The Kiawah Collection. (#8599)
- 1734 1848-O XF45 NGC.** Lighter yellow-gold centers give way to deeper orange-gold at the rims. This Choice XF coin is softly struck overall with a vertical abrasion noted in the left obverse field.
From The Kiawah Collection. (#8600)

Low Mintage 1848-O Eagle, AU50

- 1735 1848-O AU50 NGC.** Most of the high-point softness on each side of this AU example can be attributed to poor striking definition rather than circulation wear. The light green-gold surfaces are somewhat muted, however, and show scattered marks that probably indicate at least a brief stay in the channels of commerce. A scarce, low mintage New Orleans Mint issue of only 35,850 pieces. Census: 19 in 50, 59 finer (6/09). (#8600)
- 1736 1849-O XF40 NGC.** Still-luminous yellow-gold surfaces show light, scattered abrasions. Well struck for this often-weak issue, though the stars are ill-defined. A shield ring rests atop the second vertical stripe, as sometimes seen on eagles dated between 1848 and 1853. (#8602)
- 1737 1849-O XF40 PCGS.** The 1849-O comes from a mintage of only 23,900 pieces and is scarce in all circulated grades. Mint State coins are extremely rare. Luster clings to some of the recesses of this evenly worn XF specimen. Yellow-gold surfaces reveal distributed marks.
From The Kiawah Collection. (#8602)

Scarce AU53 1849-O Ten

- 1738 1849-O AU53 NGC.** A scarcer New Orleans No Motto issue, limited by its low mintage of 23,900 pieces. This example has clean pale gold surfaces that show small marks but no heavy abrasions. Luster glimmers from the eagle and legends. Only one piece (an MS61) has ever been certified as Mint State by NGC. Census: 18 in 53, 20 finer (6/09). (#8602)
- 1739 1850 Large Date AU58 NGC.** Well struck with bright apricot-gold coloration, minor wear on the central high points of each side, and numerous wispy hairlines in the fields. The attractively smooth surfaces only reveal a few small abrasions overall. Census: 50 in 58, 21 finer (5/09).
From The Kiawah Collection. (#8603)
- 1740 1850 Small Date AU55 NGC.** The Small Date obverse is a bit scarcer than the Large Date; especially so in higher circulated grades. This piece is sharply struck at the centers, but most of the obverse stars lack their centrils. Examination finds moderate abrasions on both sides, although traces of luster survive in the protected areas. Identifiable by a scratch on Liberty's jaw that slips by close to her ear. Census: 14 in 55, 20 finer (5/09).
From The Kiawah Collection. (#8604)
- 1741 1850-O VF35 PCGS.** A faintly lustrous Choice VF example of this O-mint eagle, pale yellow-gold overall with glimpses of green. Modestly abraded, as expected for the grade. Population: 12 in 35, 81 finer (5/09). (#8605)

1742 1850-O AU50 NGC. Jeff Garrett and Ron Guth (2006) write: "The 1858-O eagle is usually seen in circulated condition, rarely above Extremely Fine, and almost never in Mint State." A few hints of orange appear on the predominantly yellow-gold surfaces of this AU50 example. The design features are generally well-defined, though there are scattered abrasions present.
From The Kiawah Collection. (#8605)

1743 1851 AU58 NGC. An underrated P-mint ten, and one that is generally not seen any finer than VF or XF. This piece exhibits considerable mint brilliance and pale golden color throughout. Field marks are numerous but uniformly light, and the strike is typically sharp in the centers.
From The Kiawah Collection. (#8606)

1744 1851-O AU55 NGC. Honey-gold surfaces display traces of green and reveal scattered light contact marks. Well struck except for weakness in the star centers. (#8607)

1745 1851-O AU55 NGC. This straw-gold O-mint No Motto ten shows only slight wear on the wingtips and hair. Luster surrounds design elements, and no marks are singularly relevant. As always for the '51-O, a shield ring is present atop the second vertical stripe. (#8607)

1746 1851-O AU55 NGC. This piece is well struck with considerable mint luster on both sides. The fields give hints of reflectivity. A slight scratch is noticeable on Liberty's face to the star at 2 o'clock, but the reverse is distraction-free.
From The Kiawah Collection. (#8607)

1747 1852 AU58 NGC. Flashy yellow-gold surfaces show undercurrents of orange. The lightly rubbed obverse has scattered marks, while the reverse shows a pair of significant abrasions above the eagle.
From The Kiawah Collection. (#8608)

1748 1852-O XF45 ANACS. The yellow-gold surfaces are surprisingly radiant on this Choice XF coin. Well struck in the centers, if softly defined on the peripheral stars, with only light abrasions appearing on each side.
From The Kiawah Collection. (#8609)

Scarce 1853/2 Eagle, AU55

1749 1853/2 AU55 NGC. FS-301, formerly FS-007. Discovered in 1960, this overdate was once considered rare. Through the years enough have been cherry-picked from dealers' inventories to qualify this issue as scarce today. However, it is a condition rarity in Mint State grades, and finding an attractive AU piece can be a challenge. The current coin affords bidders in this sale the opportunity to acquire a nice, original example with lustrous surfaces. Two marks by star 4 are the only distractions worthy of mention. Census: 40 in 55, 22 finer (5/09).
From The Kiawah Collection. (#8611)

1750 1853-O AU53 NGC. The recesses retain traces of luster and yellow-gold patina covers each side. Generally well defined with scattered small abrasions. (#8612)

1751 1853-O AU53 NGC. Pale yellow-gold surfaces offer considerable radiance. Scattered wispy abrasions and a few more significant marks are present, most noticeably at Liberty's neck.
From The Kiawah Collection. (#8612)

Challenging Near-Mint 1854 Eagle

1752 1854 AU58 NGC. Mintages of ten dollar pieces dropped after the introduction of the double eagle. The 1854 ten has a mintage of just 54,250 pieces, less than one-tenth the production of its Philadelphia twenty dollar counterpart. This is an impressive example with original peach-tinged toning where the extensive remaining luster resides. Minor marks are scattered, but are unimportant for the grade. Census: 53 in 58, 13 finer (6/09). (#8613)

1753 1854-O Small Date AU55 NGC. The Small Date 1854-O gold eagle is rare in Mint State. The peach-gold surfaces of this Choice AU specimen display traces of luster in the protected areas, and an attentive strike leaves relatively strong definition on the design features. A scattering of light marks occurs on each side.
From The Kiawah Collection. (#8614)

1754 1854-O Large Date AU53 NGC. A satiny AU example with soft striking details, especially on the eagle and the obverse stars. The green-gold surfaces display moderate wear and wispy marks. Numismatists continue to disagree about which variety is scarcer: the Large Date or the Small Date.
From The Kiawah Collection. (#98614)

1755 1854-S AU53 NGC. A well struck, lightly circulated example of this initial San Francisco eagle issue. The obverse has soft yellow-gold luster with minor to moderate abrasions, while the reverse also shows a degree of alloy around the E in STATES. (#8615)

1756 1854-S AU55 NGC. The 1854-S eagle is historic, as it represents the first ten dollar issue from the San Francisco Mint. The '54-S quarter eagle and half eagle are formidable rarities, but the eagle is collectible with its mintage of 123,826 coins. This moderately abraded example offers noticeable luster and a good strike.
From The Kiawah Collection. (#8615)

1757 1855 AU58 NGC. Luster shows in the recesses of this near-Mint State ten dollar. Generally well struck except for the usual weakness in some of the star centers. Distributed marks occur on both sides. (#8616)

1758 1855 AU58 NGC. A fair amount of luster resides in the protected areas of this near-Mint State ten dollar. A well executed strike leaves sharp detail on the devices except for weakness on most of the star centrils. Bright brassy-gold surfaces show scattered small marks. (#8616)

1759 1855 AU58 NGC. Boldly struck overall, if a bit weak on some of the obverse star centrils. Traces of wear are noted on the hair detail nearest to Liberty's ear, and on the eagle's wingtips. A scarce issue at this grade level and rare in Mint State.
From The Kiawah Collection. (#8616)

1760 1855-O XF40 NGC. Genuinely rare in Mint State, the 1855-O eagle was produced to the extent of only 18,000 coins in antebellum New Orleans. This Extremely Fine coin is somewhat abraded but still mildly prooflike, with nice orange-gold color. A couple of scrapes through the date require singular mention. Census: 12 in 40, 82 finer (5/09).
From The Kiawah Collection. (#8617)

1761 1855-S VF25 PCGS. In 1855, a scant 9,000 eagles were struck at the San Francisco Mint. Survivors are rare in all grades. On this example Liberty's hair shows expected wear but some plumage detail is evident, and traces of luster reside in protected areas. Small digs are noted near the obverse border at 2 and 6 o'clock, and on the reverse border at 12, 1, and 4 o'clock.
Ex: Long Beach Signature (Heritage, 5/2008), lot 3399, which realized \$2,300.

From The Kiawah Collection. (#8618)

1762 1856 AU58 NGC. A fine, mildly prooflike example of this Philadelphia Mint issue, with gorgeous green-gold and pink coloration and few surface marks. The obverse stars are flat, but the remaining design motifs are sharply struck. A rare date in Uncirculated condition.

From The Kiawah Collection. (#8619)

1763 1856-O XF45 PCGS. Luster fills the reverse periphery and emerges from other protected regions. There are no remotely consequential abrasions. A tiny mintage of 14,500 pieces ensures the scarcity of the 1856-O eagle. Certified in a green label holder. Population: 14 in 45, 29 finer (5/09).

From The Kiawah Collection. (#8620)

1764 1856-S AU55 NGC. A touch of wear appears across the softly struck portrait and stars. Despite brief circulation, the pale yellow-gold surfaces exhibit pleasing luster with few singularly mentionable marks.

From The Kiawah Collection. (#8621)

Important 1857 Liberty Ten, AU55

1765 1857 AU55 NGC. Perhaps because the next issue is so rare, the 1857 eagle is sometimes overlooked for its own importance. This piece is a pleasing pale yellow-gold example with light abrasions on each side. Production was just over 16,000 coins, and most wound up in circulation; high grade pieces are seldom seen. Census: 18 in 55, 27 finer (5/09).

From The Kiawah Collection. (#8622)

1766 1858-O AU50 PCGS. CAC. An original orange-gold No Motto New Orleans ten with ample luster and attractive, unblemished surfaces. A meager 20,000 pieces were struck. Housed in a green label holder. Population: 26 in 50, 44 finer (6/09). (#8626)

1767 1858-O AU50 NGC. Light yellow-gold color overall with considerable luster remaining in the fields. Abrasions surrounding the central devices contribute to the grade.

From The Kiawah Collection. (#8626)

Appealing 1858-S Ten, XF40

1768 1858-S XF40 NGC. Light greenish-gold surfaces provide a base for traces of luster that remain in the protected areas on each side of this pleasing eagle. The surfaces are moderately abraded as expected, but the overall eye appeal is exceptional. The 1858-S is a rare date with a mintage of only 11,800 coins, although it is often overshadowed by the extremely rare 1858 Philadelphia eagle.

From The Kiawah Collection. (#8627)

Seldom-Seen Choice XF 1858-S Ten

1769 1858-S XF45 PCGS. In the early years of the San Francisco Mint, the facility concentrated on double eagle production, which was preferred by bankers and exporters. High denominations also made it easier for the poorly funded branch mint to coin bullion. Thus the 1858-S eagle was limited to 11,800 pieces, yet none were saved, since neither PCGS nor NGC has graded any as Mint State. This example is sharply defined, moderately abraded, and has substantial luster for the XF45 level. Population: 9 in 45, 14 finer (5/09). (#8627)

1770 1859 AU55 NGC. This khaki-gold survivor shows bold definition in the centers, while the obverse stars are uniformly flat. Small marks are evident on both sides, but the piece retains decent eye appeal with attractive coloration and considerable prooflikeness in the fields. A scarce, low mintage issue. Census: 34 in 55, 36 finer (5/09).

From The Kiawah Collection. (#8628)

Rare 1859-S Ten, XF45

1771 1859-S XF45 NGC. Although the San Francisco Mint coined 636,445 double eagles in 1859, their production of ten dollar pieces was far less generous. Only 7,000 eagles were coined, and those all went into circulation, since none have been certified as Mint State by either major service. The present Choice XF example has considerable luster about the borders and devices. No marks are mentionable, and the wing plumage shows only modest wear. Census: 17 in 45, 13 finer (6/09). (#8630)

- 1772 1860-O XF45 NGC.** Boldly struck on all of the major devices. A prominent die chip is noticeable near the center of the vertical shield stripes. The satiny surfaces display appealing lime-gold and peach patina. Modestly worn, with a smattering of wispy hairlines and tiny contact marks on each side. A scarce, low mintage New Orleans issue with only 11,100 coins produced.
From The Kiawah Collection. (#98631)

Difficult AU55 1860-O Ten Dollar

- 1773 1860-O AU55 PCGS.** The 1860-O ten dollar, from a mintage of 11,100 pieces, is usually encountered in the XF40 to AU50 range. Higher-level AU specimens are more difficult to locate, and Mint State coins are elusive. Luster resides in the recesses of this yellow-gold Choice AU example. Well defined and revealing distributed small marks. Population: 8 in 55, 3 finer (5/09). (#98631)

- 1774 1861 AU58 PCGS.** Rounded hair bun hub. A pumpkin-gold example of this Civil War issue. A band of luminous luster fills both borders. A number of small marks are noted in the fields, though none of them merit individual mention. Population: 26 in 58, 28 finer (5/09).
Ex: Central States Signature (Heritage, 4/2006), lot 3955, which realized \$2,300.
From The Kiawah Collection. (#8633)

- 1775 1861-S VF25 NGC.** The level of design detail that remains evident is impressive for the grade, especially on the obverse. An attractive khaki representative with hints of dark verdigris near the peripheral devices. Smoothly worn and free of severe marks. A scarce issue at any grade level.
From The Kiawah Collection. (#8634)

- 1776 1862 XF40 NGC.** Well struck, except on the obverse stars, with slight wear visible only on the design's highest points. Satiny and unhindered by any severe marks. A scarce, low mintage issue from the first full year of the Civil War.
From The Kiawah Collection. (#8635)

- 1777 1862-S—Obverse Scratched—NCS. Fine Details.** Reddish-gold patination runs over both sides of this S-mint eagle. Nice definition shows for the Fine Details grade. Faint pinscratches in the lower left obverse field are not that detracting. A scattering of light contact marks are visible over each side.
From The Kiawah Collection. (#8636)

- 1778 1862-S VF20 PCGS.** Rich peach-red toning confirms that the present rare-date No Motto eagle retains its original skin. Liberty's hair and the eagle's wings are worn, but much detail remains, and there are no obtrusive marks. From the low mintage of 12,500 pieces, none have been certified by PCGS in grades above AU55 (5/09).
From The Kiawah Collection. (#8636)

- 1779 1863-S Fine 12 PCGS.** This rare-date eagle features rich orange toning and has the expected number of small field marks. Encapsulated in a green label holder. Even more challenging to locate than its mintage of 10,000 pieces suggests.
From The Kiawah Collection. (#8638)

Low-Mintage 1865 Ten Dollar, VF25

- 1780 1865 VF25 PCGS.** This low-mintage ten dollar of 3,980 circulation strikes is difficult to locate in the higher circulated grades and is virtually unobtainable in Mint State. The present yellow-gold VF25 offering displays hints of faded red and is generally well defined. Light to moderate marks are distributed over both sides. Encapsulated in a green label holder.
From The Kiawah Collection. (#8641)

Distinguished AU 1865 Ten

- 1781 1865 AU50 PCGS.** With fewer than 4,000 pieces struck, it is understandable that the 1865 eagle is elusive in any grade, even if it is slightly more available than some of its similarly low-mintage peers in lesser states. This yellow-orange example retains considerable flashiness in the fields, though wear and scattered moderate abrasions combine to preclude a finer designation. Population: 4 in 50, 10 finer (5/09). (#8641)

Wonderful 865 Over Inverted 186 1865-S Eagle, Fine 12

- 1782 1865-S 865 Over Inverted 186 Fine 12 NGC.** An important example of the 865 over Inverted Date eagle that was struck in San Francisco. At the time, three-digit logotypes were used, with the final date digit added with a separate punch. The engraver accidentally punched the three digits upside down and then went back to correct his error, leaving a spectacular variety for collectors today. Although well worn, this wonderful green-gold eagle has smooth, mark-free surfaces and presents exceptional quality for the assigned grade. A popular variety listed in the *Guide Book*; although the overdate is more common than the Normal Date variant of the issue, both see intense collector pressure.
From The Kiawah Collection. (#8643)

1783 1866 VF35 PCGS. The date is obviously repunched to the right, probably diagnostic to business strikes of this issue, which were limited to 3,750 pieces. The remaining luster is substantial for the grade, and marks are minor with only a hair-thin line on the cheek worthy of mention. Population: 6 in 35, 34 finer (5/09).
Ex: Baltimore ANA Signature (Heritage, 7/2008), lot 3137, which realized \$2,300.
From The Kiawah Collection. (#8649)

1784 1868 AU55 NGC. The postwar eagles of the 1860s, such as the present piece, are clearly more common (due to somewhat higher mintages) than the coins minted during the Civil War, but few of them were saved. The current AU55 example shows red-gold patina, along with well struck design elements. Some minute marks, typical of a lightly circulated coin, are noted over both sides. Census: 20 in 55, 22 finer (5/09).
From The Kiawah Collection. (#8653)

1785 1868-S XF40 PCGS. This green-gold representative has more luster than is customary for the XF40 grade, and although small marks are scattered, none individually distract. A mere 13,500 pieces were struck, since double eagles were the preferred denomination of both importers and bankers.
From The Kiawah Collection. (#8654)

1786 1869 XF40 NGC. Light wear is concentrated on the devices, and the yellow-gold fields retain considerable luster. Scattered abrasions are present on each side, and hints of alloy are present near the stars. Census: 5 in 40, 30 finer (5/09).
From The Kiawah Collection. (#8655)

1787 1869-S XF40 PCGS. This orange-gold rare date eagle has substantial luster for the grade, and is minimally abraded except for a pair of thin marks on the right reverse field. Only 6,430 pieces were struck. Housed in a green label holder. Population: 6 in 40, 26 finer (5/09).
Ex: FUN Signature (Heritage, 1/2000), lot 7849, which realized \$1,955.
From The Kiawah Collection. (#8656)

Desirable AU 1870 Ten Dollar

1788 1870 AU50 PCGS. This luminous AU example is housed in a green-label PCGS holder. It has moderately abraded honey-gold surfaces that exude ample luster, especially in the protected areas close to the design elements. Just 3,990 pieces were struck, and perhaps 200 examples survive in all grades. Population: 13 in 50, 12 finer (10/08).
Ex: Houston Signature (Heritage, 12/2008), lot 2138, which realized \$2,530.
From The Kiawah Collection. (#8657)

1789 1870-S XF40 NGC. The 1870-S eagle is available to collectors, though between an original mintage of 8,000 pieces and heavy attrition, survivors are few. This XF example shows light, even wear over the straw-gold surfaces. Well struck with light, scattered abrasions and a trace of original luster at the reverse periphery. Census: 5 in 40, 47 finer (5/09).
From The Kiawah Collection. (#8659)

1790 1871—Improperly Cleaned—NCS. Fine Details. Faint hairlines appear under magnification. A couple of pinscratches under the ear are noted, as are some milling marks in the lower right obverse field. Honey-gold surfaces exhibit reasonable detail for the Fine Details grade. The 1871 eagle is a formidable rarity: only 1,790 pieces were struck for circulation. The 30 proofs coined are likewise rare.
From The Kiawah Collection. (#8660)

1791 1871-S XF40 PCGS. A scarce date, unsurprisingly with a mintage of only 16,500 coins in the Old West. This lightly worn piece retains a surprising amount of its original luster. The strike is typical, with scattered handling marks that have little effect on the overall eye appeal. Population: 13 in 40, 25 finer (5/09).
From The Kiawah Collection. (#8662)

Pleasing AU 1871-S Eagle

1792 1871-S AU50 PCGS. Garrett and Guth (2006) describe the 1871-S as a “very scarce date” with About Uncirculated examples “very rare” due to a low survival rate. Pleasing orange-gold toning graces both sides of this lightly circulated representative. Scattered abrasions, typical for the grade, minimally affect the remaining luster. Population: 6 in 50, 5 finer (6/09). (#8662)

1793 1872-S AU50 PCGS. The 1872-S ten dollar saw a mintage of only 17,300 coins and is most frequently encountered in the XF level of preservation. Uncirculated coins are exceedingly rare: Only two have thus far certified—an MS61 and an MS60, both at NGC. This is a well defined, lightly abraded AU specimen with peach-gold patina.
From The Kiawah Collection. (#8665)

1794 1873-S VF30 NGC. Glimpses of luster remain in the protected areas of this midrange example. Yellow-orange surfaces show a number of fine abrasions and a few more significant marks. One of 12,000 pieces struck.
From The Kiawah Collection. (#8668)

Unheralded AU 1873-S Ten Dollar

1795 1873-S AU50 NGC. The 1873-S is an unheralded scarcity within the Motto series. Just 12,000 pieces were struck, and apparently no Uncirculated examples were saved. NGC has yet to certify a Mint State example and has graded a total of only 85 pieces, a number of which are likely resubmissions. This pleasing AU specimen offers noticeable peach-tinged luster and no untoward abrasions. Census: 9 in 50, 29 finer (5/09). (#8668)

1796 1874 MS60 NGC. An unworn survivor with a sharply struck reverse and bright yellow-gold mirrors. Though a number of abrasions are noted on each side, the MS60 designation seems uncharitable. Census: 25 in 60, 46 finer (5/09). (#8669)

1797 1874 MS61 NGC. Pale straw-gold color overall with a slight deepening to lemon-yellow close to the rims. Well struck with no trace of wear, though a number of scattered abrasions combine to preclude a finer grade. Census: 27 in 61, 19 finer (5/09).
From The Kiawah Collection. (#8669)

Challenging 1874-CC VF35 Ten Dollar

- 1798 1874-CC VF35 PCGS.** The 1874-CC eagle is one of the more readily available CC-mint dates prior to the 1890s but is still a challenging issue, and extremely rare in Mint State. This pleasing Choice VF specimen has relatively smooth light yellow surfaces with a hint of green. The fields remain slightly reflective, and the overall eye appeal is excellent.

From The Kiawah Collection. (#8670)

- 1799 1874-S XF40 PCGS.** The 1874-S eagle has a low mintage of 10,000 pieces. The apricot-gold surfaces of this XF example possess traces of luster in the protected areas and display even wear. Scattered light marks do not detract. AU coins are extremely rare; Mint State pieces are virtually nonexistent.

From The Kiawah Collection. (#8671)

- 1800 1875-CC VG10 NGC.** The left-side obverse denticles are smooth, but the shield lines are fully separated, and ample wing detail remains. LIBERTY is bold. When the piece was new, the obverse rim presumably was low-relief and failed to protect the obverse border. An affordable example of this rare issue, one of just 7,715 pieces struck.

From The Kiawah Collection. (#8673)

- 1801 1876-S XF40 PCGS.** The 1876-S eagle comes from a low mintage of 5,000 pieces and is extremely popular as such. Greenish-gold patina embraces both sides, each of which reveals just minor contacts. Fairly nice detail is evident on the design features. (#8676)

Splendid 1876-S Ten, XF45

- 1802 1876-S XF45 PCGS.** "The best example that Harry Bass could find, even with all of his contacts and unlimited budget, was only an AU-53 coin," report Garrett and Guth in relation to this low-mintage Centennial date, produced to the extent of just 5,000 pieces. The present Choice XF example shows attractive yellow-gold surfaces that still retain some luster and have relatively few abrasions. Population: 22 in 45, 12 finer (5/09).

From The Kiawah Collection. (#8676)

Popular 1876-S Ten Dollar, XF45

- 1803 1876-S XF45 PCGS.** The 1876-S eagle is difficult to obtain in any grade and is a popular date due to its low mintage of 5,000 pieces. Most certified examples are in the XF to AU range, with none in Mint State. The peach-gold surfaces of this Choice XF coin are imbued with hints of apricot and mint-green and exhibit well defined devices. The expected number of minute marks are seen over each side. Population: 23 in 45, 12 finer (6/09). (#8676)

- 1804 1877-S XF45 NGC.** Ex: Bass. Tinges of peach-red luster outline the design elements of this well defined Choice XF better date eagle. Only 17,000 pieces were struck, since the double eagle was more convenient for large payments.

Ex: Stanley Kesselman, 4/1967; Harry W. Bass, Jr. Collection, Part Two (Bowers and Merena, 10/1999), lot 1558. (#8679)

Bold 1877-S Eagle, AU55

- 1805 1877-S AU55 NGC.** A scarce date from a mintage of just 17,000 coins, the 1877-S eagle is infrequently seen in any grade. This delightful example is boldly detailed, with pleasing light to medium yellow surfaces. The few trivial surface marks are consistent with the grade. Census: 44 in 55, 15 finer (5/09).

From The Kiawah Collection. (#8679)

- 1806 1878 MS62 PCGS.** An uncommon date, the 1878 is a condition rarity among the later issues in the Coronet series, especially elusive in Mint State. This piece is fully struck and quite clean overall, with an unusually rich complement of deep red-orange toning. Population: 40 in 62, 17 finer (5/09).

From The Kiawah Collection. (#8680)

- 1807 1878-CC Fine 12 PCGS.** Though plainly worn, this wheat-gold Carson City eagle retains hints of radiance in the fields. Lightly abraded yet appealing for the grade. One of just 3,244 pieces struck during this year where the focus at the Nevada mint was on the "Bland" dollar. Population: 2 in 12, 53 finer (5/09).

From The Kiawah Collection. (#8681)

- 1808 1878-S AU50 NGC.** The 1878-S completed a lengthy run of low mintage, rare date San Francisco eagles that began in 1857. During the same era, huge numbers of twenty dollar pieces were coined annually at the same facility, since that denomination was more convenient for accounting large sums. This is a bold straw-gold example with noticeable luster on the hair, eagle, and legends. (#8682)

1809 1879-S MS62 PCGS. Although a common coin in grades up to and including AU58, few Mint State examples of this San Francisco Mint issue have survived. This piece is sharply struck and has orange-gold surfaces with emerald-green accents. Population: 12 in 62, 5 finer (5/09).
From The Kiawah Collection. (#8686)

1810 1880 MS63 NGC. Well struck with pink accents enlivening otherwise yellow-gold and orange-gold surfaces. Select and slightly satiny with strong definition. Census: 28 in 63, 7 finer (5/09).
From The Kiawah Collection. (#8687)

Sharp AU 1880-CC Eagle

1811 1880-CC AU50 PCGS. Impressive luster in the fields is minimally affected by scattered abrasions, none of which merit individual mention. The high points show light wear that is typical of the grade, but the reverse is exceptionally bold. One of just 11,190 pieces minted. Population: 25 in 50, 43 finer (6/09). (#8688)

1812 1880-CC AU50 NGC. Traces of luster cling to the recesses of this Carson City representative, and yellow-gold surfaces display hints of mint-green and lilac, especially on the reverse. Minute distributed marks are noted on each side.
From The Kiawah Collection. (#8688)

1813 1880-O AU50 NGC. Light yellow-gold color with pleasing luster. The light wear on each side is focused on the high points, though the small to moderate abrasions are scattered.
From The Kiawah Collection. (#8689)

1814 1881-CC XF45 NGC. This Choice XF CC-mint example displays strong detail despite wear on the high points. Lightly abraded honey-gold surfaces reveal hints of luster in the recesses. (#8692)

1815 1881-CC AU55 NGC. A lovely midseries Carson City eagle example, well-defined with light wear largely confined to the high points. This leaves the bright sun-gold fields gleaming with considerable luster. An excellent candidate for the type collector seeking a slightly better Carson City date.
From The Kiawah Collection. (#8692)

1816 1881-O AU53 PCGS. Ample luster is still found in the recesses of this O-mint representative, and a well directed strike sharpens the design features. The yellow-gold surfaces are lightly abraded. Housed in a green label holder. Population: 16 in 53, 12 finer (5/09). (#8693)

1817 1881-O AU55 NGC. Pleasing yellow-gold color overall with hints of orange and honey near the rims. Reflectivity in the fields persists through abrasions and modest wear. Census: 26 in 55, 44 finer (5/09).
From The Kiawah Collection. (#8693)

1818 1882 MS62 Prooflike NGC. The fields are clearly reflective despite the customary number of small marks for the MS62 level. A sharply struck sun-gold representative. Census: 11 in 62, 1 finer (6/09).
From The Bay State Collection, Part One. (#78695)

1819 1882-CC XF40 NGC. Yellow-gold surfaces exhibit traces of light tan and lavender. This is a nicely defined piece. A light rim bruise is visible at 6 o'clock on the reverse.
From The Kiawah Collection. (#8696)

1820 1882-O AU58 NGC. This rare-date New Orleans eagle is typically marked but offers substantial glowing luster. Nicely struck despite a few soft star centers. Only 10,820 pieces were produced. Census: 43 in 58, 14 finer (5/09).
From The Kiawah Collection. (#8697)

Important 1882-S Liberty Eagle, MS63

1821 1882-S MS63 NGC. An outstanding example of this condition rarity, with frosty yellow brilliance and a trace of pale green toning along the border. Both sides have minor surface marks of little consequence. NGC and PCGS together have graded five finer pieces. Census: 19 in 63, 2 finer (5/09).
From The Kiawah Collection. (#8698)

1822 1883 MS63 NGC. The strike is virtually complete, with frosty features and vibrant fields that have sustained a fair share of light blemishes. The 1883 eagle is rare any finer, with just five numerically superior coins known to NGC (5/09).
From The Kiawah Collection. (#8699)

1823 1883-CC AU53 NGC. Bright yellow-gold surfaces retain a good amount of luster in the protected areas and reveal the expected number of marks. Nice detail is apparent on the design features.
From The Kiawah Collection. (#8700)

1824 1883-S MS61 NGC. Crisply struck with bright yellow-gold luster. Though numerous fine abrasions affect the portrait and the fields on each side, the eagle is comparatively mark-free. Census: 19 in 61, 12 finer (5/09).
From The Kiawah Collection. (#8702)

1825 1884-CC XF45 PCGS. Traces of luster appear in the recesses of this well defined Choice XF ten. Pretty yellow-gold and apricot hues cover both sides. What Douglas Winter (2001) calls "chisel marks" are visible on Liberty's neck and the I and T of LIBERTY. He says, "These appear to have been done intentionally in an effort to 'cancel' or deface the obverse die."
From The Kiawah Collection. (#8704)

Scarce 1885 Liberty Eagle, MS63

1826 1885 MS63 NGC. Before the discovery of a few European minihoards in recent years, the 1885 eagle was considered rare in Mint State. Owing to the repatriation of the small overseas holdings, a handful of Uncirculated examples are now available to collectors. The current coin is one of only 22 Select MS63 specimens seen by NGC, with a mere 11 coins of this date grading finer (5/09). The fields are bright with a confirmed reflectivity on each side. Sharply defined throughout with even, rich orange-gold color.
From The Kiawah Collection. (#8706)

- 1827 1885-S MS63 PCGS.** The centers are pale straw-gold, while the fields have richer butter-yellow color and a thin ring of orange graces the margins. This colorful example displays light, scattered marks and a handful of green-tinged alloy spots in the obverse fields. An attractive representative of this midseries S-mint eagle, one of 228,000 pieces struck. PCGS has graded just one finer coin (5/09).

From The Kiawah Collection. (#8707)

Conditionally Elusive 1886 Eagle, MS63

- 1828 1886 MS63 NGC.** Mint State 1886 eagles are readily available at the lower end but become rare in MS63 and extremely rare in near-Gem. Anything finer is virtually unobtainable. This Select example displays lustrous honey-gold surfaces and sharply struck design elements. A few light marks and luster grazes account for the grade. Census: 27 in 63, 3 finer (5/09).

From The Kiawah Collection. (#8708)

Rare Prooflike MS62 1886 Ten Dollar

- 1829 1886 MS62 Prooflike NGC.** Flashy and nicely preserved, with fully brilliant surfaces that show startling depths of glassy reflectivity in the fields. Well struck with no severe marks on the central devices, and just moderate blemishes and a few faint hairlines in the fields. A conditionally scarce example with fully Prooflike surfaces. Census: 2 in 62 Prooflike, 0 finer (6/09).

From The Bay State Collection, Part One. (#78708)

- 1830 1887-S MS63 PCGS.** A pleasing, well struck example of this conditionally rare San Francisco issue. Luster sweeps unencumbered across lightly and evenly abraded fields and devices. Population: 65 in 63, 2 finer (6/09). (#8711)

- 1831 1887-S MS63 PCGS.** Lime margins frame the rich peach centers. A well struck ten dollar piece that has vibrant luster and attractive fields. Liberty's cheek shows a couple of thin, subdued marks. A conditional rarity at the MS63 level. Population: 65 in 63, 2 finer (5/09).

From The Kiawah Collection. (#8711)

- 1832 1888 MS62 PCGS.** This better-date Liberty eagle has good luster, particularly vibrant on the reverse. Minor field marks are consistent with the grade. Well struck, although the neck curls and the lowest hair bun lack full detail due to a lapped obverse die, as made. Population: 12 in 62, 6 finer (5/09).

Ex: FUN Signature (Heritage, 1/2006), lot 5462, which realized \$2,300.

From The Kiawah Collection. (#8712)

- 1833 1888-O MS62 ★ NGC.** This is the *only* 1888-O ten dollar given the coveted Star designation. Its partially prooflike fields establish relatively strong variance with the sharply struck motifs when the coin is tilted just slightly under a light source. Light scattered marks keep the piece from a higher numerical grade, few of which are found in the certified population. (#8713)

- 1834 1888-O MS62 NGC.** Yellow-orange overall with occasional hints of sun-gold present at the margins. Though wispy abrasions in the satiny fields preclude Select status, the devices are sharply struck and pleasing. NGC has graded just eight numerically finer pieces (5/09).

From The Kiawah Collection. (#8713)

- 1835 1888-S MS63 PCGS.** Peach-gold fields are bounded by forest-green borders, a toning pattern familiar to hunters of original gold coins. Lustrous and crisply struck with the scattered tiny marks associated with the Select level. Population: 99 in 63, 3 finer (6/09). (#8714)

- 1836 1888-S MS63 PCGS.** Well struck with bright mint luster and lovely coloration. The grade derives from the small abrasions scattered over each side. This issue is quite scarce at the MS63 grade level and becomes downright rare any finer. Population: 99 in 63, 3 finer (5/09).

From The Kiawah Collection. (#8714)

- 1837 1890-CC AU58 PCGS. CAC.** The hair above the ear shows slight friction, but luster penetrates the open obverse field. The obverse field is moderately abraded but has no obtrusive marks. Much scarcer than its 1891-CC successor, the 1890-CC has a mintage of only 17,500 pieces. (#8718)

- 1838 1890-CC AU58 NGC.** Boldly impressed with bright yellow-gold color and great eye appeal. Light but distinct rub is noted on the curl directly over Liberty's ear.

From The Kiawah Collection. (#8718)

Remarkable 1890-CC Eagle, Select Mint State

- 1839 1890-CC MS63 NGC.** With a mintage of just 17,500 pieces, the 1890-CC eagle is difficult to locate in Select Uncirculated and virtually impossible to find in a higher grade. Medium yellow patina covers both sides of this impressively lustrous specimen. The surfaces show only trivial abrasions, and the strike is mostly sharp. Census: 11 in 63, 0 finer (6/09).

From The Bay State Collection, Part One. (#8718)

- 1840 1891-CC MS60 NGC. FS-501.** The mintmark is obviously repunched. The most potent luster of this honey-gold eagle occurs in the recessed areas of its sharply struck design elements. Scattered contact marks are visible over both sides. (#8720)

- 1841 1891-CC MS62 NGC.** The most common Liberty eagle from the Carson City Mint, the 1891-CC is a favored issue among collectors of both circulated and Mint State type. This pleasing Mint State representative is richly toned in reddish-gold hues. The luster is frosty, the devices are well impressed, and the number of abrasions is consistent with the assigned grade.

From The Kiawah Collection. (#8720)

- 1842 1891-CC MS62 ICG.** Peach-gold surfaces yield semiprooflike fields that establish modest variance with the well struck devices. Scattered moderate abrasions limit the grade. (#8720)

Dazzling 1891-CC Eagle, MS62 Prooflike

1843 1891-CC MS62 Prooflike NGC. The deep, glassy reflectivity in the fields, on each side of this Carson City eagle, gives the piece a flashy, dazzling appearance that is quite remarkable. Lovely champagne-gold toning only increases the coin's visual appeal. Well struck with numerous wispy marks that are consistent with the MS62 grade level. One of only nine pieces graded by NGC as MS62 Prooflike, with no Prooflike examples graded any finer (6/09). (#78720)

1844 1892-CC AU58 NGC. Sharply struck with strong, satiny luster. The prevailing color is dusky gold-orange, though hints of peach are also visible. Just a touch of rub is present. NGC has graded 38 finer pieces (5/09).
From The Kiawah Collection. (#8722)

1845 1892-O MS62 NGC. Hazy green-gold patina over lustrous surfaces, with a few too many small marks from coin-to-coin contact to qualify for the Select designation. Nonetheless quite appealing and extremely difficult to find any finer, with none graded above MS62 at NGC (5/09).
From The Kiawah Collection. (#8723)

Challenging 1892-S Select Ten

1846 1892-S MS63 PCGS. Mint State 1892-S ten dollar pieces can be located with a bit of effort in the MS60 to MS62 levels. Select coins such as the current offering are more challenging and higher-grade examples are virtually unobtainable. Mint-green and orange-gold coloration runs over both sides, each of which exhibits sharply struck motifs. Scattered minute marks result in occasional disruptions in the luster flow. Population: 41 in 63, 0 finer (6/09). (#8724)

Impressive 1892-S Eagle, MS63

1847 1892-S MS63 NGC. While a number of 1892-S tens were found in a hoard in 1977, the MS63 grade level is the cutoff for availability of this amply produced issue. Both of the major services have certified only one piece between them above MS63. The surfaces of this coin show lovely mint luster that rolls around each side in a cartwheel manner. The design elements are sharply struck, but there are a number of small abrasions on each side that limit the grade. Census: 16 in 63, 1 finer (5/09).
From The Kiawah Collection. (#8724)

Extraordinary 1893 Eagle, MS62 Deep Prooflike

1848 1893 MS62 Deep Prooflike NGC. An extraordinary piece that looks like a full proof, but turns out to be a fully mirrored and lustrous business strike with exceptional design details and amazing eye appeal. The surfaces are abraded as expected for the grade, although few are of any consequence. NGC has certified more than 6,200 eagles of 1892, but only three pieces have been called Deep Prooflike (5/09). (#78725)

1849 1893-CC XF45 PCGS. Luminous antique-gold and butter-yellow color overall with glimpses of subdued pink-peach in the obverse fields. Though lightly worn, this Choice XF coin has few overt abrasions. (#8726)

1850 1893-CC AU50 PCGS. The 1893-CC ten dollar is difficult to locate, especially in Mint State. This AU example displays a good amount of luster in the recesses of its yellow-gold surfaces. High-point wear does not diminish the sharp detail. Lightly abraded.
From The Kiawah Collection. (#8726)

Impressive AU53 1893-CC Ten

1851 1893-CC AU53 PCGS. Original lemon-gold luster dominates the borders and recessed devices of this lightly circulated example. Carson City eagle production ended in 1893 with a tiny emission of only 14,000 pieces, which makes the issue considerably more difficult to locate than the 1891-CC or even the 1892-CC. Population: 12 in 53, 47 finer (5/09). (#8726)

1852 1893-O MS62 PCGS. The 1893-O is available through MS62 despite the low 17,000-piece mintage. Anything finer is very rare. Yellow-gold, apricot, and lime-green patination resides on both sides. The reverse is lightly marked, the obverse more moderately so. *From The Kiawah Collection.* (#8727)

1853 1893-O MS62 NGC. A mere 17,000 pieces were struck for this conditionally rare New Orleans emission. Neither major grading service has encapsulated any examples above MS63. A boldly struck and lustrous example with a few too many minor obverse marks to tie for finest known. (#8727)

Sharply Struck 1893-S Eagle, MS63

1854 1893-S MS63 PCGS. The 1893-S is even scarcer than its mintage of 141,350 pieces implies. A majority of survivors grade AU; only a handful of examples are known above the MS63 level. This lustrous Select coin boasts peach toning with hints of mint-green and lilac and is sharply struck throughout. Minute contact marks limit the grade. Population: 40 in 63, 4 finer (5/09). *From The Kiawah Collection.* (#8728)

1855 1894-O MS62 NGC. An original honey-gold New Orleans eagle, housed in a prior generation holder. Well struck in the centers, although a few stars are soft. Marks are distributed but none merit mention. Scarcer in Mint State than the mintage of 107,500 pieces implies. Census: 50 in 62, 17 finer (5/09). *From The Kiawah Collection.* (#8730)

Important 1894-S Liberty Eagle, MS60

1856 1894-S MS60 NGC. 1890s San Francisco eagle mintages bottomed out in 1894 with a tiny production of 25,000 pieces. Double eagles were the preferred S-mint gold denomination that year, with a mintage of more than 1 million coins. This precisely struck example is only lightly abraded for the grade and has full luster on the reverse. The base of the 1 is repunched. Census: 5 in 60, 12 finer (5/09). *From The Kiawah Collection.* (#8731)

1857 1895 MS64 NGC. The 1895 ten dollar is undeniably scarce above the Select BU level. This example exhibits sharply struck design features, and the lustrous surfaces show only moderate grazes acquired from peers long ago. NGC and PCGS combined have graded only five coins higher (5/09). *From The Kiawah Collection.* (#8732)

1858 1895-O MS62 NGC. Strong yellow-gold luster with occasional orange undercurrents. Pleasingly detailed overall, though the two closest stars on the right of the date are softly defined. Census: 76 in 62, 12 finer (5/09). *From The Kiawah Collection.* (#8733)

Crisp 1896-S Ten Dollar, MS62

1859 1896-S MS62 PCGS. This lustrous and crisply struck better-date ten dollar displays a few moderate marks, as expected for the grade. Yellow-gold color adorns both sides, each of which shows some light tan and apricot. The 1896-S is difficult to locate in a finer grade. Population: 42 in 62, 6 finer (5/09). *From The Kiawah Collection.* (#8736)

1860 1897 MS64 NGC. Decisively struck with frost-sparkling yellow-orange and peach surfaces. This minimally marked near-Gem offers memorable eye appeal. NGC has graded 24 numerically finer pieces (5/09). (#8737)

1861 1897-O MS62 PCGS. There are remarkably few sizeable abrasions for a branch mint eagle at the present grade level. Warmly colored in olive-gold hues, with an otherwise bold strike that wanes over a few of the obverse star centrils. Population: 46 in 62, 29 finer (5/09). *From The Kiawah Collection.* (#8738)

1862 1898 MS64 NGC. Well struck with shimmering mint luster and alluring honey-peach coloration. The surfaces are clean and the only individually noticeable blemish is a small mark on Liberty's cheek, adjacent to her mouth. According to Garrett and Guth, examples of this issue become rare at MS64 and above. *From The Kiawah Collection.* (#8740)

1863 1899 MS64 NGC. This rose-gold Liberty ten dollar piece has good luster, a bold strike, and no offensive marks. This turn-of-the-century issue is scarce above the MS64 grade level.
From The Kiawah Collection. (#8742)

1864 1899 MS64 NGC. An attractive green-gold near-Gem that boasts a precise strike and a minimally abraded portrait. The fields have only a few faint grazes. The date is lightly repunched, visible within the loops of the digits.
From The Bay State Collection, Part One. (#8742)

1865 1899-O MS62 NGC. A well struck example that has good luster and moderately abraded fields. There is a spot of purple patina between the scroll and the left wing. Although only 37,047 pieces were struck, the 1899-O eagle is not a rarity in scuffy Uncirculated condition. However, it becomes very scarce as it approaches Select status. Census: 14 in 62, 10 finer (5/09).
From The Kiawah Collection. (#8743)

Pleasing Select 1899-S Ten Dollar

1866 1899-S MS63 PCGS. A wonderful ten dollar gold piece with potent luster, a precise strike, and clean surfaces. Apricot-tinted fields and devices are framed by lime-green margins. A conditionally rare issue seen much less often at the MS63 level than its Philadelphia counterpart. Population: 50 in 63, 17 finer (6/09). (#8744)

Sharp MS63 1899-S Eagle

1867 1899-S MS63 NGC. Invigorating luster endows this well impressed and minimally abraded Liberty ten. Only a trio of tiny ticks near the chin deny a higher grade. The 1899-S is scarcer in Mint State than its mintage suggests, and most certified examples are clustered in AU58 to MS62 grades. Census: 33 in 63, 14 finer (6/09). (#8744)

Elusive Select 1899-S Ten

1868 1899-S MS63 NGC. Bright yellow-gold luster and strong design detail. This is a great Select example of its turn-of-the-century issue with few overt abrasions. Unexpectedly scarce at the MS63 level, apparently the issue was little saved in foreign bank holdings. Census: 33 in 63, 14 finer (5/09).
From The Kiawah Collection. (#8744)

1869 1900-S MS62 NGC. This San Francisco Mint issue is scarce above the MS62 level. This example is sharply struck, with intense mint luster and appealing greenish-apricot toning. A typical number of superficial abrasions are seen on each side for the grade. Census: 13 in 62, 7 finer (5/09).
From The Kiawah Collection. (#8746)

1870 1901 MS64 PCGS. Frosty and lustrous light yellow surfaces with excellent eye appeal. Well made with sharp design elements on both sides.
From The Kiawah Collection. (#8747)

Conditionally Rare 1901-O Eagle, MS63

1871 1901-O MS63 NGC. The New Orleans Mint struck few gold issues in the 20th century. This piece has highly lustrous honey-gold surfaces with few abrasions on either side. It features a sharp strike. Examples are generally easy to locate in grades up to MS62, but MS63 and finer pieces are major rarities. Census: 21 in 63, 6 finer (5/09).
From The Kiawah Collection. (#8748)

Exquisite Gem 1901-S Ten Dollar

1872 1901-S MS65 PCGS. CAC. This lemon-gold Gem type coin has booming luster and splendidly undisturbed surfaces. A few faint, parallel roller marks are seen beneath TRUST, but the strike is otherwise exacting. A dazzling example certain to impress the beholder. Certified in a green label holder. (#8749)

Captivating 1901-S Eagle, MS66

1873 1901-S MS66 NGC. CAC. The 1901-S eagle is one of the more common dates in the series, based on its high mintage that approaches 3 million pieces and a large number of survivors. That said, this sharply struck Premium Gem exudes captivating eye appeal. Dazzling luster emanates from apricot-gold, mint-green, and lavender surfaces that reveal just a few minor, grade-consistent marks. (#8749)

1874 1902 MS63 NGC. A boldly struck representative with strong cartwheel luster and a small contact mark on Liberty's chin. The 1902, coming after 1901's massive production exceeding 1.7 million eagles, is a low mintage issue that is uncommonly encountered in Select Mint State.
From The Kiawah Collection. (#8750)

Bold 1902-S Eagle, MS64

1875 1902-S MS64 PCGS. A well executed strike imparts sharp definition to the design elements of this near-Gem eagle, and greenish-gold surfaces are splashed with orange and display pleasing luster. A scattering of small marks denies Gem status. This date is readily available in Mint State, owing to the discovery of two hoards of more than 1,000 coins after 1970 (Walter Breen, 1988).
From The Kiawah Collection. (#8751)

Sharp 1903 Near-Gem Ten Dollar

1876 1903 MS64 PCGS. The mintage was a relatively meager 125,830 circulation strikes, a rather small production for the time. In addition to its low production, the 1903 is a major condition rarity, with just one finer coin graded by PCGS. This near-Gem example is frosty and lustrous, with lemon-yellow color and moderate abrasions consistent with the grade. A solid strike delivers strong detail to the devices. Population: 45 in 64, 1 finer (5/09).
From The Kiawah Collection. (#8752)

1877 1903-O MS63 NGC. Rich orange color blossoms over parts of this otherwise yellow-gold piece. Strongly struck with great eye appeal for the Select designation. Census: 49 in 63, 8 finer (5/09).
From The Kiawah Collection. (#8753)

1878 1904-O MS63 PCGS. A satiny honey-gold New Orleans ten that has clean surfaces and the look of a higher grade. Although the 1904-O is not difficult to find in AU and the lower Mint State grades, it becomes significantly scarce at the MS63 level. Population: 61 in 63, 15 finer (5/09).
From The Kiawah Collection. (#8756)

1879 1905-S MS62 PCGS. Despite a relatively high mintage of more than 369,000 coins, the 1905-S is one of the more difficult 20th century eagles to find in high grade. Apparently few were saved by collectors or resided in European vaults (Jeff Garrett and Ron Guth, 2006). This well struck, lustrous MS62 example displays yellow-gold surfaces imbued with hints of mint-green and lilac. Distributed minute marks limit the grade. Population: 27 in 62, 13 finer (5/09).
From The Kiawah Collection. (#8758)

1880 1906-D MS64 PCGS. A lustrous honey-gold near-Gem from the first year of coinage at the Denver Mint. The strike is intricate, and marks are minor in both number and consequence.
From The Kiawah Collection. (#8760)

Conditionally Rare MS66 1906-D Eagle

1881 1906-D MS66 NGC. The 1906-D eagle was among the first coins struck at the newly opened Denver Mint, and it is quite challenging in Gem and finer grades. Dazzling satiny luster highlights the nearly fully struck devices of the present coin. A few light grazes are nearly imperceptible to the unaided eye. A glance at the population data indicates how rare this date is in Premium Gem, and only one specimen has been certified finer by either grading service. Census: 1 in 66, 1 finer (6/09).
From The Bay State Collection, Part One. (#8760)

1882 1907 MS64 PCGS. With warm orange-gold surfaces and no singularly distracting abrasions, this coin would fit well in a Choice quality type set. Pleasingly detailed overall with great eye appeal for this final Philadelphia Coronet issue.
From The Kiawah Collection. (#8763)

Lustrous 1907 Gem Ten Dollar

1883 1907 MS65 NGC. The 1907 Liberty Head ten dollar is readily located through the MS63 level of preservation as evident from the several thousand coins graded by NGC and PCGS. Near-Gems can be acquired with a bit of searching, but MS65 pieces are scarce and anything finer is rare. Yellow-gold coloration graces the lustrous surfaces of this MS65 specimen and a decisive strike emboldens the design features. A few trivial marks may well preclude an even finer grade. Census: 84 in 65, 5 finer (6/09). (#8763)

- 1884 1907-D MS64 NGC.** The 1907-D eagle is difficult to locate in the better Mint State grades. This near-Gem displays satiny peach-gold luster and well impressed design elements. A few minuscule marks define the grade. Census: 50 in 64, 6 finer (5/09).
From The Kiawah Collection. (#8764)

PROOF LIBERTY EAGLE

Scarce PR55 1899 Liberty Eagle

- 1885 1899 PR55 NGC.** As a business strike, the 1899 ranks among the most plentiful issues in the long-lived Liberty eagle series. Proofs are a different matter altogether, since only 86 examples were struck. Some, like the present piece, were spent in the early 20th century, even by dealers such as B. Max Mehl. Few numismatists collected proof eagles before the 1930s, and specimens often traded for close to face value. The present coin retains ample proof flash within protected areas. The strike is exemplary, and scattered moderate marks are typical of limited circulation. (#8839)

INDIAN EAGLES

1907 No Periods, No Motto Indian Ten MS63

- 1886 1907 No Periods MS63 PCGS.** This pleasing gold type coin has the initial appearance of a decidedly finer grade. The lustrous fields are smooth, and the devices are generally unabraded. Thorough examination eventually reveals a subdued mark on the cheekbone. The No Motto design was only coined for two years, without the huge mintages of its double eagle counterpart. (#8852)

Charming Select 1907 No Periods Ten

- 1887 1907 No Periods MS63 PCGS.** A charming first-year representative of this popular series. The 1907 No Periods eagle was the third Indian Head type struck at the Philadelphia Mint, following the 1907 Wire Rim and the 1907 Rounded Rim, both With Periods types. Apricot-gold luster adorns this Select example, which illustrates nicely struck design features. A few minuscule marks prevent an even finer grade.
From The Kiawah Collection. (#8852)

- 1888 1908 No Motto MS62 PCGS.** Softly struck with bright lemon-gold luster. Though the obverse shows light to moderate abrasions, the eye appeal remains high. Housed in a green label holder.
From The Kiawah Collection. (#8853)

- 1889 1908-D No Motto MS62 PCGS.** Rich orange-gold patination dominates this D-mint ten dollar, accented with traces of ice-blue and lilac. Well struck and revealing just a few minute marks. It is interesting to note that the 1908-D eagle is the only branch mint issue to have the mintmark placed to the upper left of the olive branch instead of to the left of the arrow points.
From The Kiawah Collection. (#8854)

- 1890 1908 Motto MS63 NGC.** Unusually well-defined for this initial Motto issue, particularly on the hair over Liberty's ear. Sun-yellow and green-gold surfaces are faintly abraded but pleasingly lustrous.
From The Kiawah Collection. (#8859)

Outstanding 1908 Motto Eagle, MS66

- 1891 1908 Motto MS66 NGC.** Although the first eagles of Saint-Gaudens' design were struck in 1907, it was not until 1908 that IN GOD WE TRUST was added at the insistence of Congress. This resplendent Premium Gem boasts attractive yellow-gold surfaces that complement eye-catching satiny luster. A few minor marks on Liberty's cheek keep this razor-sharp piece from an even higher grade. Census: 38 in 66, 7 finer (6/09). (#8859)

- 1892 1908-D Motto MS62 NGC.** Strongly struck with lovely yellow-gold luster. Each side is minimally abraded overall, though a small dig is noted in the lower left obverse field.
From The Kiawah Collection. (#8860)

- 1893 1908-S AU58 NGC.** Strongly lustrous yellow-gold surfaces are pleasing despite scattered abrasions. The obverse is close to Mint State, though a long, thin mark passes through the right reverse field.
From The Kiawah Collection. (#8861)

Exceptional 1909-D Ten Dollar, MS62

- 1894 1909-D MS62 PCGS.** The 1909-D ten dollar generally ranks below-average in luster, surface preservation, and overall eye appeal (David Akers, 2008). Bright luster emanates from both sides of this MS62 specimen, which displays an attractive medley of yellow-gold, mint-green, and lilac throughout. A well executed strike imparts sharp delineation to the design features. Scattered contacts limit the grade, yet this green-holdered piece is appealing for the grade assigned.
From The Kiawah Collection. (#8863)

Satiny Near-Gem 1909-D Eagle

- 1895 1909-D MS64 PCGS.** Though the 1909-D eagle has a below-average mintage of under an eighth of a million pieces, production alone does not explain the issue's rarity in better Mint State grades. This peach-tinged butter-yellow near-Gem offers excellent definition and eye appeal for the little-saved issue. It is minimally marked with great eye appeal. Population: 32 in 64, 10 finer (5/09). (#8863)

Scarce 1909-S Indian Ten, MS62

- 1896 1909-S MS62 NGC.** Light orange patina drapes both sides of this scarcer Indian ten. While the eye appeal is undeniable, there are contact marks noted on both sides and a few alloy specks. The strike and underlying luster are both quite acceptable for the assigned grade.
From The Kiawah Collection. (#8864)

- 1897 1910 MS64 PCGS.** A melange of orange-gold, sky-blue, and lilac patination rests on the highly lustrous surfaces of this near-Gem ten dollar. This is a well struck piece with just a few marks that deny Gem classification. (#8865)

- 1898 1910-D MS64 NGC.** Brass-gold surfaces display hints of light green and rose and have a finely granular texture. The design elements are well impressed. Minor marks, more so on the obverse, limit the grade. (#8866)

- 1899 1910-D MS64 NGC.** Bright yellow patina endows the carefully preserved surfaces of this appealing representative. The strike is crisp save for trivial softness at the centers. An excellent example for a type collector. (#8866)

- 1900 1910-D MS64 PCGS.** Peach-gold color embraces both sides of this well impressed D-mint issue. Nicely preserved surfaces reveal fewer marks than expected for the grade level.
From The Kiawah Collection. (#8866)

- 1901 1910-S MS60 NGC.** Though softly struck, this dusky wheat-gold example shows no trace of wear. Suggestions of orange and hints of copper alloy add variety to each side. (#8867)

Attractive MS62 1910-S Indian Eagle

- 1902 1910-S MS62 PCGS.** This MS62 specimen is yellow-gold, with subtle rose and mint-green hues. A nicely struck representative that has good luster and a few minor abrasions, more so on the reverse. Scarce and perhaps underappreciated in this grade. Housed in a green label holder.
From The Kiawah Collection. (#8867)

- 1903 1911 MS63 NGC.** Satiny yellow luster and bold design details characterize this Select Mint State 1911 eagle with trivial grade-consistent surface marks. (#8868)

- 1904 1911 MS63 NGC.** Peach and olive shades are illuminated by the sweeping cartwheel luster. Sharply struck, and minimally abraded save for a few unobtrusive marks on the field beneath UNUM. (#8868)

- 1905 1911 MS63 NGC.** Scintillating luster sweeps this honey-gold Select Indian ten. The strike is precise, and the surfaces are original and display only unimportant imperfections. (#8868)

- 1906 1911 MS64 NGC.** Apricot-gold lustrous surfaces are imbued with traces of mint-green, and a well executed strike brings out strong detail on the design features. Minute surface and rim marks prevent Gem status. (#8868)

- 1907 1911 MS64 PCGS.** The yellow-gold surfaces of this near-Gem display vibrant luster and sharply struck design features. A few light marks preclude Gem classification. (#8868)

Lovely Gem 1911 Indian Head Ten Dollar

- 1908 1911 MS65 PCGS.** A meticulously struck Gem that boasts blended olive-gold and caramel-gold toning. Coruscating luster reveals only trivial surface imperfections. Not strictly a type coin, since the 1911 is much scarcer than the 1926 or 1932 at the MS65 level. Population: 58 in 65, 27 finer (6/09). (#8868)

- 1909 1911-D AU55 PCGS.** This better date eagle displays cartwheel sheen and has a paucity of abrasions. Slight rub on the eagle's plumage confirms momentary circulation. The lowest mintage Indian ten dollar issue, as only 30,100 pieces were struck. *From The Kiawah Collection.* (#8869)
- 1910 1911-S MS60 NGC.** The yellow-orange surfaces have a single dark spot on the headdress, near the periphery at 12 o'clock. Lustrous and well struck, though the fields and devices are significantly abraded. *From The Kiawah Collection.* (#8870)
- 1911 1912-S MS62 NGC.** Generally nicely struck with apricot-gold coloration. A few scattered small abrasions limit the grade. A relatively common S-mint Indian eagle. *From The Kiawah Collection.* (#8872)
- 1912 1913 MS64 NGC.** A sharply struck and thoroughly lustrous near-Gem that boasts a clean appearance and good eye appeal. A worthy representative of this widely collected gold type. (#8873)

Brilliant 1913 Indian Ten, MS64

- 1913 1913 MS64 PCGS.** This pleasing Indian eagle, housed in a green label PCGS holder, is highly lustrous with brilliant yellow-gold surfaces. Traces of pale rose toning add to its overall eye appeal. The price should be strong, based on the issue's rarity in higher grades. PCGS has only certified 58 finer pieces (5/09). *From The Kiawah Collection.* (#8873)
- 1914 1913-S AU55 PCGS.** Despite modest wear, this well struck 1913-S eagle retains considerable luster that enlivens the faintly green-gold surfaces. Light marks are present on and near the portrait. (#8874)
- 1915 1913-S AU58 NGC.** Strongly lustrous with striking yellow surfaces that show a touch of goldenrod. Faintly abraded overall with modest friction appearing on the high points of the well struck devices. *From The Kiawah Collection.* (#8874)
- 1916 1914 MS63 NGC.** Lustrous and lightly abraded with slight blending of detail along the left edge of the front wing. The lower-mintage 1914 is something of a sleeper within the Indian eagle series, although it trades for a strong premium above type prices in MS63 and higher grades. *From The Kiawah Collection.* (#8875)
- 1917 1914-D MS63 PCGS.** Apricot-gold and mint-green compete for territory on the lustrous surfaces of this Select D-mint specimen. Sharply struck design features contribute to the nice eye appeal, a few small marks notwithstanding. *From The Kiawah Collection.* (#8876)

Dynamic MS65 1914-D Ten

- 1918 1914-D MS65 PCGS.** Fantastically lustrous with an unusually strong strike. Each side is largely yellow-gold with a line of alloy running from the F in OF on the reverse to the start of E PLURIBUS UNUM. A carefully preserved Gem example of an issue seldom found as such. Population: 20 in 65, 7 finer (5/09). (#8876)

Elusive MS66 1914-D Eagle

- 1919 1914-D MS66 NGC.** The 1914-D ten dollar has a generous mintage of 343,500 pieces. David Akers (2008) writes that it is the most frequently encountered mintmarked date in the Indian eagle series after the 1910-D. Uncirculated examples are generally available through MS64, as indicated by NGC/PCGS population figures. Higher grade pieces are rare and generally available only at major auctions.

Attractive greenish-gold adorns both sides of this Premium Gem, each of which displays frosted mint luster. A well executed strike leaves sharp definition on the design elements, and close inspection reveals the surfaces and rims to be devoid of significant contact marks. Great overall eye appeal. Census: 12 in 66, 6 finer (5/09). (#8876)

Conditionally Scarce 1914-S Eagle, MS64

1920 1914-S MS64 PCGS. Garrett and Guth (2006) describe the 1914-S as “one of the more conditionally challenging dates,” a statement that is confirmed by the population data from both NGC and PCGS. The present coin exhibits glittering satiny luster beneath pleasing lemon-yellow patina. The strike is razor-sharp and the surfaces are remarkably clean. PCGS has certified only 11 pieces finer (6/09). (#8877)

1921 1915-S PCGS Genuine. A scant 59,000 pieces were struck for this challenging San Francisco issue. Only the 1911-D has a lower mintage, although the ‘15-S has a higher survival rate than the 1920-S, 1926-D, or 1933. The surfaces are satiny and suitably struck, with only a hint of wear on the curl beneath the B in LIBERTY. They are also smooth and slightly bright, revealing a single faint, hair-thin mark above the tail. The PCGS Genuine code, 94, translates as “Altered Surfaces.” (#8879)

1922 1915-S MS60 ANACS. Well struck overall, though slight loss of detail is noted at the front of the eagle’s wings. Each side has bright yellow luster with sun-gold accents. Solid eye appeal for this popular and low-mintage issue.
From The Kiawah Collection. (#8879)

Lustrous 1916-S Indian Ten, MS62

1923 1916-S MS62 NGC. Most of the Mint State survivors are from two small European hoards found in the 1970s. However, the existing population of higher grade pieces is quite small. For example, NGC has only graded 63 pieces better than this example (5/09). Both sides are brilliant and lustrous, with deep yellow-gold color and light rose toning.
From The Kiawah Collection. (#8880)

Splendid, Satiny Gem 1926 Eagle

1924 1926 MS65 NGC. The 1926 is challenging in grades higher than Gem, and NGC and PCGS combined have certified just 58 such examples (6/09). This crisply struck piece exhibits splendid satiny luster beneath lovely yellow patina. This carefully preserved Gem would make an excellent representative for a type or date set. (#8882)

1925 1926 MS65 NGC. The final two Indian eagle issues are the two most common dates, and two of the three issues with mintages that exceeded 1 million coins. This bold Gem is frosty and brilliant with lustrous honey-gold surfaces that exhibit lovely rose highlights.
From The Bay State Collection, Part One. (#8882)

1926 1932 MS63 NGC. Well-defined with amazingly bright straw-gold surfaces. A handful of abrasions, including one at Liberty’s jawline, account for the grade. (#8884)

1927 1932 MS64 PCGS. The 1932 is the most common Indian eagle. A melange of yellow-gold, mint-green and apricot coloration adorns the lustrous surfaces of this near-Gem specimen, and a decisive strike leaves strong detail on the design elements. Minute marks deny gem status. Encapsulated in a green label holder. (#8884)

1928 1932 MS64 NGC. Production of gold coins came to an end in the 1930s, and while large quantities were minted, few were released with the single exception of the 1932 Indian eagle. Today it is the single most common date in the series, and the only readily available U.S. gold coin of the decade. This near-Gem is a lovely piece with outstanding eye appeal. The surfaces are frosty and lustrous.
From The Bay State Collection, Part One. (#8884)

Sensational Premium Gem 1932 Eagle

1929 1932 MS66 NGC. This is a sensational Premium Gem with intense, coruscant luster that illuminates exquisite lime-green and peach-gold coloration. The immaculate surfaces display fine-grained, mattelike textures and just a few tiny marks on each side. Well struck throughout, and a great example overall. NGC has only graded seven pieces finer (6/09). (#8884)

Desirable MS66 1932 Eagle

1930 1932 MS66 PCGS. CAC. This famous Saint-Gaudens eagle type issue is available for a price in grades through Gem, but MS66 pieces are more elusive and anything finer is decidedly rare. The present piece has peach-infused yellow-gold surfaces with swirling luster and pleasing frostiness on the devices. The lone mentionable mark is a tiny nick on the eagle's leg. (#8884)

Resplendent 1932 Eagle, MS66

1931 1932 MS66 NGC. With the highest mintage out of the entire series, the 1932 is a perennial favorite among type collectors. This representative features the scintillating luster and powerful strike that are the hallmark of this issue. The pleasing yellow-orange surfaces have only a few inconsequential grazes. A collector would have a difficult time finding a better example from this year: NGC and PCGS combined have certified only eight pieces finer (6/09). (#8884)

LIBERTY DOUBLE EAGLES

Popular 1850 Twenty Dollar, AU50

1932 1850 AU50 NGC. Satiny and attractive, with as much luster as expected for a coin grading several points higher. Evenly worn with numerous wispy hairlines in the fields, but few larger marks or blemishes of any kind. Always extremely popular as the first year of regular issue for the type and denomination. *From The Kiawah Collection.* (#8902)

Choice AU 1850 Double Eagle

1933 1850 AU55 NGC. The yellow-gold surfaces display touches of light green, along with traces of luster in the recessed areas. Nicely detailed except for high-point wear. A few minute marks are scattered about, as expected for a coin that saw light circulation. The 1850 is one of the more available dates of the type. (#8902)

Elusive 1850 Liberty Twenty, MS61 Popular First-Year Type Coin

1934 1850 MS61 PCGS. CAC. The first year of production for the denomination and a popular issue for type collectors, the 1850 double eagle is seldom available in Mint State grades. This attractive piece has rich yellow luster with a hint of green toning. The surfaces are satiny, with slightly reflective fields. Moderate abrasions are typical of the grade, but none are of any particular consequence. Population: 11 in 61, 40 finer (5/09). (#8902)

First-Year 1850-O Double Eagle, VF30

- 1935 1850-O VF30 NGC.** The first year of issue for the denomination, and the first appearance of these large gold coins in New Orleans. The event was monumental in the history of American coinage and in the saga of the Gold Rush, as massive amounts of the precious metal began to arrive in the Southern port town. The distinct green-gold appearance is typical of many double eagles coined from California gold. This piece is lightly abraded with traces of luster on each side. (#8903)

Elusive 1850-O Double Eagle, XF Details

- 1936 1850-O—Scratched—NCS. XF Details.** While the surfaces exhibit a few modest scratches, scuffs, and abrasions, the existing detail approaches AU, with some remaining luster in the protected areas close to the devices. The overall eye appeal of this desirable twenty is finer than the description indicates. (#8903)

Scarce 1850-O Twenty Dollar, XF45

- 1937 1850-O XF45 NGC.** New Orleans participated in the production of the double eagle in its inaugural year of commercial coining. However, only 141,000 pieces were struck, much less than the 1.17 million coins struck at the mother Mint in Philadelphia. The O-mint issue went directly into circulation, where it remained until the Civil War. NGC and PCGS have certified only a combined four pieces as Mint State (5/09). Collectors must settle for moderately abraded circulated examples that retain traces of luster, such as the present apricot-gold piece. The mintmark is entered high and touches the tail feathers. Slight recutting is noted on the upper inside of the mintmark.
From The Kiawah Collection. (#8903)

- 1938 1851 AU58 NGC.** Rich yellow-orange color and strong eye appeal. Only modest friction across the high points keeps this attractive, minimally abraded piece from a Mint State designation.
From The Kiawah Collection. (#8904)

- 1939 1851-O—Improperly Cleaned—NCS. XF Details.** Well struck in the centers with typical softness at the stars. Scattered abrasions and hairlines affect each side, though the overbright yellow-orange surfaces show a few hints of originality near the rims. (#8905)

Choice XF 1851-O Double Eagle

- 1940 1851-O XF45 PCGS.** This Choice XF yellow-gold double eagle displays deeper orange color at the rims. The design elements exhibit nice detail save for high-point wear and contain luster within their recessed areas. The expected small marks are distributed over each side but are generally less severe than typically encountered. One of the most common New Orleans twenties.
From The Kiawah Collection. (#8905)

Desirable 1851-O Twenty, AU Details

- 1941 1851-O—Scratched—NCS. AU Details.** Light hairlines and minor abrasions are visible on each side of this piece, but the overall appearance is still excellent. Generous portions of original mint luster can still be seen on the lemon-yellow surfaces. The design elements are bold. (#8905)

Distinguished AU55 1851-O Double Eagle

- 1942 1851-O AU55 PCGS.** Considerable flashiness dominates the eye appeal of this minimally worn New Orleans twenty. The centers are relatively well-defined, though characteristic weakness has affected all stars but those in the upper right quadrant of the obverse, with similar weakness mirrored in the reverse lettering. Strong eye appeal nonetheless, aided by a dearth of abrasions. Population: 31 in 55, 25 finer (5/09). (#8905)

Lustrous 1852 Double Eagle, AU58

- 1943 1852 AU58 NGC.** An attractive near-Mint example of an issue that is seldom found in Mint State, this piece has brilliant light yellow luster with trivial marks that are consistent with the grade. About 130 examples were found in the S.S. *Central America* and S.S. *Republic* treasures, but only about a dozen of them were Mint State. From *The Kiawah Collection*. (#8906)

Popular AU 1852-O Twenty

- 1944 1852-O AU50 NGC.** The New Orleans Mint struck double eagles each year between 1850 and 1861, but most of those issues had tiny mintages. O-mint type demand thus focuses on the few affordable issues struck between 1850 and 1853. Even those four New Orleans issues are far from common, although they can be acquired by the patient gold collector. The present coin shows moderate wear on the wingtips, but the straw-gold surfaces possess luster remnants and lack obtrusive abrasions. (#8907)

1852-O Liberty Double Eagle, AU50

- 1945 1852-O AU50 NGC.** A surprisingly available issue, with numerous circulated survivors that are available to collectors. This AU example reveals clear, bold design definition, with just a typical degree of high point wear for the grade. The light green-gold surfaces display considerable semiprooflikeness and numerous small marks on each side. From *The Kiawah Collection*. (#8907)

- 1946 1853 AU50 NGC.** Well struck for the issue with attractive yellow-orange color and a touch of alloy at the upper right obverse rim. Scattered abrasions in the portrait area contribute to the grade. From *The Sonoma Collection*. (#8908)

- 1947 1853 AU55 NGC.** Substantial luster shimmers from the devices and legends of this lightly abraded double eagle. The hair shows slight wear, but nearly all of the initial detail remains. (#8908)

Near-Mint 1853 Double Eagle

- 1948 1853 AU58 NGC.** Although not struck in the greater numbers of the 1851 and 1852 issues, the 1853 did see a total production well in excess of 1 million coins, and examples are numerous at the current grade level. This straw-gold piece is lustrous and close to Mint State. Minor friction on Liberty's hair bun and the eagle's wingtips combine with plentiful small abrasions to limit the grade. From *The Kiawah Collection*. (#8908)

Well Detailed 1853/2 XF45 Double Eagle

- 1949 1853/2 XF45 PCGS.** FS-301, formerly FS-008. Remnants of a numeral, presumably a 2, are visible inside the lower curve of the 3 in the date, and a diagnostic die lump is beneath the R of LIBERTY. Yellow-gold surfaces display luster in the recessed areas and are rather lightly abraded. High-point wear does not significantly diminish the detail on the design features.
From The Kiawah Collection. (#8909)

AU Details 1853/2 Twenty Dollar

- 1950 1853/2—Improperly Cleaned—NCS.** AU Details. FS-301, formerly FS-008. Recutting is present within the lower loop of the 3 in the date. The diagnostic die lump resides beneath the R in LIBERTY. The sole overdate in the Liberty double eagle series. This green-gold representative has little actual wear, but the fields are slightly glossy and are clouded with hairlines. (#8909)

Attractive 1853-O Twenty Dollar, XF40

- 1951 1853-O XF40 NGC.** An attractive O-mint example with bright surfaces, bold striking detail, and few individually noteworthy abrasions. A scarce twenty in all grades, the 1853-O issue had a minor mintage of 71,000 pieces, and survivors are not plentiful enough to fully satisfy collector demand.
From The Kiawah Collection. (#8910)

-
- 1952 1854 Small Date XF45 NGC.** This double eagle has accumulated various tiny marks from circulation, but original orange-tinged luster remains in design recesses.
From The Bay State Collection, Part One. (#8911)

Pleasing 1854 Small Date Twenty, AU58

- 1953 1854 Small Date AU58 PCGS.** The more common of the two die varieties. A good amount of luster remains on the orange-gold surfaces of this near-Mint State specimen. Nicely struck throughout and minimally abraded for a coin that saw brief circulation. A couple of as-struck planchet flaws do not detract. Population: 26 in 58 for both varieties, 21 finer (5/09).
From The Kiawah Collection. (#8911)

Rare 1854 Large Date Double Eagle, AU50

- 1954 1854 Large Date AU50 PCGS.** A bright and richly toned example, with lovely honey-gold toning and strong accents of pink-rose near the devices. The design elements are sharply struck throughout, and there is only a modest amount of circulation wear to be seen on the coin's high points. Most of the surface abrasions on each side are merely superficial. According to the *Encyclopedia of U.S. Gold Coins*: "The Large Date variety of the 1854 double eagle is much rarer than the Small Date." Population: 2 in 50, 22 finer (5/09).
From The Kiawah Collection. (#8911)

Bright AU 1854-S Double Eagle

- 1955 1854-S AU50 PCGS.** The bright brassy-gold surfaces of this S-mint representative possess traces of luster in the recessed areas, and the design elements are well defined despite light wear. Distributed minute marks are visible over each side, and a fine crack travels from the top of the first T in TWENTY through the lower left field.
From The Kiawah Collection. (#8913)

- 1956 1855 AU55 NGC.** Crisply defined with only minor, localized wear. Pleasingly lustrous surfaces are pale yellow-gold with light, scattered marks and a few abrasions clustered to the left of the coronet.
From The Kiawah Collection. (#8914)
- 1957 1855-S AU50 NGC.** This satiny orange-gold AU double eagle has original color, and the only noticeable marks are tiny rim nicks on the reverse near 3 o'clock and at 7:30. The fledgling San Francisco Mint struggled to produce sufficient gold coins in 1855, causing the firms of Kellogg & Co. and Wass, Molitor to strike their own gold issues. (#8916)
- 1958 1855-S AU55 NGC.** Well struck for this second-year San Francisco twenty with bright yellow-gold luster. A number of small, scattered abrasions affect the obverse, yet the eye appeal remains strong.
From The Kiawah Collection. (#8916)
- 1959 1855-S AU55 NGC.** The surfaces display remnants of original luster and a partial cartwheel sheen, and the only singularly mentionable abrasion is a moderate reed mark behind Liberty's eye. The second S-mint issue in the Liberty double eagle series, the 1855-S becomes elusive in grades approaching Mint State.
From The Sonoma Collection. (#8916)
- 1960 1856 AU50 NGC.** Though lightly worn, this yellow-gold piece retains considerable luster in the fields. Each side shows scattered marks as well as one or two more significant abrasions.
From The Kiawah Collection. (#8917)
- 1961 1856-S XF45 NGC.** Excellent definition is present on the design features of this Choice XF double eagle. The yellow-gold surfaces display traces of apricot, and are moderately abraded. (#8919)
- 1962 1856-S—Obverse Graffiti—NCS. AU Details.** A capital letter "M" (or "W") and a Roman numeral "II" have been scratched into the upper left obverse field. Otherwise, the coin looks like a nice AU example, with rich coloration and considerable amounts of remaining luster. (#8919)
- 1963 1856-S AU58 NGC.** Solidly struck with a hint of friction on the high points. The lightly marked fields are partially reflective, though they have a number of handling marks.
From The Kiawah Collection. (#8919)
- 1964 1857 XF40 NGC.** The rays, legends, stars, and shield glimmer with luster. The fields display marks consistent with the grade. High point wear is limited. (#8920)

Near-Mint State 1857 Double Eagle

- 1965 1857 AU58 PCGS.** The 1857 is a scarce date, with most available specimens grading VF or XF, although AU and occasional Uncirculated pieces are seen. This AU58 specimen boasts bright peach-gold surfaces that display nearly complete luster. The design elements are generally well defined, though portions of Liberty's hair are weak. A few small abrasions are noted over each side, and a planchet lamination is apparent in the lower left reverse quadrant.
From The Kiawah Collection. (#8920)

Attractive XF 1857-O Double Eagle

- 1966 1857-O XF40 ANACS.** A bright and attractive XF example, with moderate but even wear across each side and lime-gold toning occasionally interspersed with hints of coral-rose. A moderate abrasion appears close to the upper right obverse rim between stars 9 and 10; most of the other surface marks are superficial.
From The Kiawah Collection. (#8921)

Rare 1857-O Liberty Twenty XF45

- 1967 1857-O XF45 PCGS.** All New Orleans double eagles are scarce, and most post-1853 dates are well known rarities. The 1857-O is difficult but collectible, since perhaps 200 examples remain from its initial production of 30,000 pieces, principally in XF and AU grades. This is a bright butter-gold representative that has a few minor obverse marks and a couple of subtle reverse rim knocks. Sharply defined for the XF45 level. Population: 25 in 45, 45 finer (6/09). (#8921)
- 1968 1857-S AU50 NGC.** Ample luster remains in the flax-gold fields of this lightly circulated, moderately abraded S-mint twenty. An excellent candidate for the type collector.
From The Sonoma Collection. (#8922)

1969 1857-S AU55 PCGS. The mintmark location and other diagnostics depart from any of the varieties attributed to the S.S. *Central America* (by Robert Evans in the July 2000 *Numismatist*), suggesting that the present example was never part of the famed shipwreck's cargo. The obverse die is distinguished by traces of misplaced date digits (probably a 1 and 8) near the dentils at 6:30. Partly lustrous and pleasing for the grade.
From The Kiawah Collection. (#8922)

Charming 1857-S Twenty, MS60

1970 1857-S MS60 NGC. The famous S.S. *Central America* date, although this example is not identified from that treasure and may be one of the rare Uncirculated pieces that was known before its discovery. The diagnostics are closest to Variety 20D, the "Faint S," but the mintmark is distinctive. Hints of pink toning are evident on the lustrous yellow-gold surfaces of this Mint State piece. While the surfaces are clearly abraded, there are no individual marks of consequence. Minor grease marks appear on the reverse.
(#8922)

Attractive 1858 Double Eagle, AU58

1971 1858 AU58 NGC. The shimmering surfaces exhibit khaki-gold and faint rose toning that is quite appealing. The devices show a minimal degree of friction on the high points. Both sides are peppered with small marks. Although relatively available in AU, this issue is scarce in Mint State. NGC has graded only 26 pieces finer (5/09).
From The Kiawah Collection. (#8923)

Choice XF 1858-O Double Eagle

1972 1858-O XF45 PCGS. Writing in the *Encyclopedia of U.S. Gold Coins*, Jeff Garrett and Ron Guth describe the 1858-O double eagle as being of similar rarity to the 1857-O twenty. They caution that probably fewer than 200 examples survive from an original mintage of 35,250 pieces. This Choice XF coin displays evenly worn devices and just a few wispy hairlines in the fields. The khaki-green surfaces are remarkably free of abrasions. Population: 29 in 45, 58 finer (5/09).
From The Kiawah Collection. (#8924)

1973 1858-S AU53 NGC. Pumpkin-gold luster is prevalent, although the cheek, hair, and wingtips show light wear. Small marks are scattered but are inoffensive. A rare issue in Mint State, unlike its '57-S predecessor. (#8925)

1974 1858-S AU53 NGC. Crisply detailed with yellow-gold surfaces that offer surprisingly fresh luster. Modestly worn with light, scattered abrasions and a rim flaw at 12 o'clock on the obverse.
From The Kiawah Collection. (#8925)

1975 1859 VF35 PCGS. The 1859 has the lowest mintage of any Philadelphia Mint Type One or Type Two double eagle, and Uncirculated examples are extremely rare. This Choice VF example still retains remnants of orange-tinged luster in protected areas, but the face and fields display thin marks.
From The Kiawah Collection. (#8926)

Exceptional 1859-O Double Eagle, AU58

1976 1859-O AU58 PCGS. Every New Orleans double eagle coined after 1853 is an important rarity. Douglas Winter, in the second edition of *Gold Coins of the New Orleans Mint* (2006), calls the 1859-O the fourth rarest New Orleans twenty, trailing the 1855-O; the ultra-rare 1854-O and 1856-O issues lead the pack. He writes:

“The 1859-O double eagle is a very scarce issue in all grades. It is most often seen in Very Fine to Extremely Fine grades and it is rare in About Uncirculated. Most pieces in this grade range are no better than AU53, and the 1859-O becomes very rare in properly graded AU55. There are currently four Uncirculated pieces known.”

PCGS and NGC combined have certified fewer than 110 1859-O twenties, and rate a mere three coins as Mint State. This near-Mint State example exhibits a better strike than ordinarily seen. Specifically, all obverse stars are bold, and most of Liberty's hair is strong. The wing tips and tail feathers reveal some of the usual softness, but the remaining reverse motif details are sharp. The surfaces display considerable medium yellow-gold luster and hints of reflectivity near the devices. Minute contact marks are scattered about, but they are fewer and less severe than ordinarily seen. This is significant, because Winter writes: “Almost every known 1859-O double eagle shows deep abrasions on the surfaces.” Small contacts beneath obverse star 5 along with three milling marks under the left (facing) wing are mentioned strictly for pedigree identification.

Considering the above-average strike and minimally abraded surfaces, this is a truly exceptional offering that will draw serious attention from New Orleans Mint collectors and those of high quality, rare gold coinage. Population: 4 in 58, 1 finer (5/09). (#8927)

Underappreciated Choice AU 1859-S Twenty

1977 1859-S AU55 PCGS. First year of the obverse hub with the I in LIBERTY from a proper punch instead of an L, as seen on prior dates. A yellow-gold piece with noticeable remaining luster and no untoward abrasions. Mostly excluded from shipwreck hoards, the 1859-S is rare in Mint State; even Choice AU examples are scarce. Population: 35 in 55, 62 finer (6/09). (#8928)

Sharp 1859-S Twenty, AU55

1978 1859-S AU55 NGC. The 1859-S twenty, with a business strike mintage of more than 600,000 pieces, is typically found in XF and AU. Like most coins of this era, the 1859-S is very rare in Mint State. This Choice AU coin displays traces of luster in the recesses of the apricot-gold surfaces. Its design features are well brought up, though portions of Liberty's hair are soft. A few of the expected bagmarks are visible, especially on the obverse.
From The Kiawah Collection. (#8928)

1979 1860 XF45 NGC. Reddish- and greenish-gold patina bathes both sides of this Choice XF double eagle. Nicely defined save for strike softness and light wear in Liberty's hair. Scattered minute marks are evident over both faces. (#8929)

Charming Near-Mint 1860 Twenty

1980 1860 AU58 NGC. Swirling cartwheel luster glides across the pleasing butter-yellow surfaces. Liberty's hair is somewhat soft, but the peripheral motifs show nice definition. A number of light abrasions define the grade, none of any significance. Although plentiful in most circulated grades, examples are somewhat scarce in Mint State. (#8929)

Conditionally Rare 1860 Double Eagle, AU58

1981 1860 AU58 NGC. While a handful of strict Mint State 1860 double eagles exist, they are almost never available for sale, leaving Choice AU and near-Mint State coins as the finest generally available for market consumption. This conditionally rare piece exhibits a few moderate marks and numerous small abrasions on each side. The bright, yellow-gold surfaces reflect abundant, satiny luster and a bold strike.
From The Kiawah Collection. (#8929)

Important AU58 1860-O Double Eagle

1982 1860-O AU58 PCGS. The New Orleans Mint, unlike its counterparts at Charlotte and Dahlonega, was equipped to produce gold denominations higher than the half eagle. Ten dollar gold pieces with an “O” mintmark appeared in 1841, and the Louisiana facility struck double eagles alongside Philadelphia in 1850, the first year of production for the twenty dollar gold piece. After the early years, however, the New Orleans Mint’s production of double eagles slowed and became erratic. In 1860, against the backdrop of swiftly deteriorating national unity, that year’s issue amounted to just 6,600 pieces.

While the 1860-O is not accorded the “stopper” status of issues such as the 1854-O and 1856-O, it is one of the more challenging Southern double eagles, and in better grades it proves just as elusive as its better-known predecessors. In the second edition of *Gold Coins of the New Orleans Mint 1839 -1909*, Doug Winter (2006) describes the 1860-O as “unlocated in Mint State,” though NGC’s *Census Report* lists an MS60 Prooflike example pedigreed to the *S.S. Republic*. Absent this specimen, now in a tightly held private collection, the only other Mint State example is an NGC-certified MS62. Winter asserts that the current pool of 20 AU58 pieces—16 at NGC and only four at PCGS (6/09)—is “highly inflated by resubmissions.”

This high-end piece’s surfaces are vivid yellow-gold with minor emerald and honey-orange overtones. Though the left obverse stars are softly struck as always, the rest of the coin shows better definition. A number of fine marks affect the luster of the fields, though the margins and protected areas show distinct reflectivity. Aside from a scuff to the right of the eagle and an abrasion on the shield, the coin shows few individually distracting flaws. Opportunities to acquire a near-Mint representative of the 1860-O double eagle are infrequent, at best. (#8930)

- 1983 1860-S XF45 NGC.** Dusky yellow-orange and antique-gold color with glimmers of luster at the margins. A pleasing Choice XF example of this challenging Type One S-mint twenty. (#8931)
- 1984 1860-S AU50 NGC.** Traces of luster rest in the protected areas of this AU S-mint specimen. The design elements are generally well defined. A linear abrasion occurs on Liberty's cheek. (#8931)
- 1985 1860-S AU50 NGC.** Pale yellow-gold color overall with bright luster. The softly struck obverse shows few significant marks, but a substantial abrasion is noted in the right reverse field. *From The Kiawah Collection.* (#8931)
- 1986 1861 AU53 NGC.** Traces of luster reside in the recessed areas of this Civil War-era double eagle. Honey-gold surfaces are imbued with hints of light tan and are lightly abraded. Sharply defined save for minor softness on Liberty's hair. (#8932)
- 1987 1861 AU58 NGC.** The yellow-gold surfaces of this near-Mint State twenty retain a good amount of luster and exhibit nicely defined devices. The expected number of contact marks is seen on each side. (#8932)
- 1988 1861 AU58 NGC.** Pale lemon-gold surfaces have fantastically flashy luster. The strike is strong, and the eye appeal is great despite a hint of friction on each side. *From The Kiawah Collection.* (#8932)

Impressive 1861 Double Eagle, MS63

- 1989 1861 MS63 NGC.** A remarkable survivor most notable for its gorgeous color and captivating luster. The rich yellow-gold surfaces have strong, slightly diffuse luster that gives the piece remarkable eye appeal. Scattered, wispy abrasions on each side account for the grade. Census: 27 in 63, 32 finer (6/09). (#8932)
- 1990 1861-S AU50 NGC.** Yellow-gold and wheat-gold surfaces retain considerable bright luster despite modest wear on the high points. Scattered wispy abrasions in the fields contribute to the grade. *From The Kiawah Collection.* (#8935)
- 1991 1861-S AU53 NGC.** The recesses of this yellow-gold twenty reveal traces of luster. Well defined, and showing some surface and rim marks. (#8935)
- 1992 1862-S AU50 NGC.** Rich yellow-gold patination hugs the surfaces of this S-mint representative. Softness is seen in some of the stars and in portions of Liberty's hair. Light to moderate marks are visible, more so on the obverse. (#8938)
- 1993 1862-S AU50 PCGS.** During the Civil War, gold coins were hoarded in the Midwest, South, and East. In the Old West, however, gold remained in circulation, since the battlefields were far away and Federal paper money was rejected. This example has good luster and no singularly consequential marks. The dusky green-gold coloration is undoubtedly original. *From The Kiawah Collection.* (#8938)

Striking AU53 1862-S Twenty

- 1994 1862-S AU53 NGC.** This Civil War-era San Francisco issue circulated heavily, and it is clearly elusive once one discounts for the inevitable resubmissions in the certified population. This luminous gold-orange example is little-abraded for the grade, though light wear blends with a soft strike on the obverse portrait and stars. *From The Sonoma Collection.* (#8938)

Elusive 1863 Double Eagle, AU53

- 1995 1863 AU53 NGC.** This Civil War-era twenty dollar gold issue is scarce at all grade levels. The mintage of 142,790 pieces was small, if not spectacularly low, and survivors are even fewer than expected as a percentage of the original number produced. This AU53 example is well struck and shows the usual amount of wear for a lightly circulated coin, along with a few noticeable abrasions on each side. *From The Kiawah Collection.* (#8939)
- 1996 1863-S XF45 NGC.** Breen-7217, "scarce." Small S. This pumpkin-gold Choice XF representative has ample luster and only one consequential mark, a faded pinscratch between the final two obverse stars. (#8940)
- 1997 1863-S AU53 NGC.** Large S. Attractive for the assigned grade, this bold example has ample bright luster and fewer marks than is customary for a lightly circulated double eagle. *From The Kiawah Collection.* (#8940)

Well Struck 1863-S Double Eagle, MS60 Details

- 1998 1863-S—Cleaned—ICG. MS60 Details.** Large S. The 1863-S is readily available in circulated grades. It takes patience and searching to locate in Mint State, but then only in the lower levels thereof; Select and better grades are elusive. The yellow-gold surfaces of this MS60 Details example reveals fine hairlines under high magnification. Luster is visible in the recessed areas of the generally well struck devices. A few minute abrasions are seen on each side. (#8940)

- 1999 1864 XF45 NGC.** This Civil War issue shows reddish-gold patina and a few scattered light marks. Higher circulated grade pieces are the most often encountered examples of this issue.
From The Kiawah Collection. (#8941)
- 2000 1864-S AU53 NGC.** Light yellow-gold surfaces have hints of green-gold color and moderate abrasions on both sides. This coin lacks the appearance of the examples from the S.S. *Brother Jonathan* treasure and is probably a preshipwreck survivor. A few heavier marks and abrasions are noted on the obverse.
From The Kiawah Collection. (#8942)
- 2001 1865 AU50 NGC.** Brassy-gold surfaces show semiprooflike fields and interstices that yield modest contrast with the motifs. Lightly worn on the high points and revealing just a scattering of minute marks. (#8943)
- 2002 1865 AU55 NGC.** At least two date digits are present in the dentils beneath the 65 in the date. This partly lustrous Civil War double eagle has only one remotely mentionable mark, concealed within the rays above the eagle.
From The Kiawah Collection. (#8943)

Important Select 1865 Liberty Twenty

- 2003 1865 MS63 PCGS.** One of the few quality Mint State examples of this Civil War issue that did *not* come from the S.S. *Republic* shipwreck, which was dispersed in April 2005, after the present piece was certified. This is a gorgeous example of the issue with brilliant yellow-gold surfaces and satiny luster. The fields are almost prooflike with considerable reflectivity. A small scratch in the left obverse field is the only blemish of note. Population: 5 in 63, 0 finer (6/09).
Ex: Long Beach Signature (Heritage, 2/2005), lot 9018, which realized \$23,000.
From The Sonoma Collection. (#8943)

- 2004 1865-S AU53 PCGS.** The yellow-gold surfaces of this S-mint representative display splashes of apricot and retain luster in the recessed areas. Minimally abraded and well struck, save for the usual softness on the hair curls.
From The Kiawah Collection. (#8944)

Scarce 1866-S No Motto Double Eagle, XF40

- 2005 1866-S No Motto XF40 PCGS.** The 1866-S No Motto issue is one of the rarest of all of the Type One double eagles. The actual mintage figure is unknown, but Garrett and Guth estimate 120,000 pieces. This example is boldly struck, with relatively clean, evenly worn surfaces. The khaki-green coloration yields to strong red-orange luster remnants near the peripheries. Population: 22 in 40, 68 finer (5/09).
From The Kiawah Collection. (#8945)

Elusive 1866-S No Motto Double Eagle, AU53

2006 1866-S No Motto AU53 PCGS. The 1866-S double eagle is the last of the No Motto Liberty Head type. Both the No Motto and the With Motto were struck in 1866 at the San Francisco Mint, of which the former is by far the rarest. Paul Green, writing about the 1866-S twenty in an April 1, 2008 *Numismatic News* article titled "Branch Made Two Versions of Double Eagle," offers the following explanation underlying the two 1866 varieties:

"The addition of the motto (In God We Trust) came quickly at Philadelphia, but shipping the new dies to San Francisco took time. Moreover, there was pressure in San Francisco to produce double eagles. If the facility got a load of gold, it could not ask the gold owner to wait a few weeks for a new die."

The original mintage of the No Motto variety is controversial. Some numismatists put the figure at 12,000 pieces while others list it as 120,000 coins. Regardless of the correct figure, there are probably no more than 200 specimens known in all grades. PCGS/NGC population data indicate that the modal grade range is XF40 to AU50. The two services have certified a mere four Uncirculated examples, none finer than MS62.

Orange-gold surfaces display whispers of faded red on this AU53 offering, and retain traces of luster in the recessed areas. The design elements are typically struck, in that softness occurs in the centers of the first four obverse stars and in portions of Liberty's hair. The reverse is better struck, a characteristic of the issue, and the horizontal shield lines are quite sharp. This latter point is significant, as these lines nearly always show weakness on surviving examples. Distributed marks are visible over both sides, though they can probably be considered less severe than the heavy abrasions that are usually encountered. In summary, this piece exhibits above-average eye appeal and is sure to elicit spirited bids. Population: 7 in 53, 7 finer (5/09). (#8945)

2007 1866 AU50 NGC. Khaki-gold toning yields to vibrant orange luster remnants near the devices. Well struck and moderately worn, with a few noticeable abrasions on each side. (#8949)

Appealing 1866 Motto Twenty, AU55

2008 1866 AU55 NGC. A trifle softly struck on the hair over the ear, but this briefly circulated Type Two example from the first year of the design subtype offers solid detail otherwise. Luminous gold-orange surfaces show few overt abrasions, though one is present on the cheek. Generally interesting eye appeal.
From The Kiawah Collection. (#8949)

2009 1866-S Motto XF45 PCGS. Honey-gold surfaces display traces of tan and mint-green, along with glints of luster in some of the recessed areas. Lightly abraded, more so on the obverse. (#8950)

2010 1866-S Motto AU50 NGC. Dusky yellow-orange surfaces show a degree of peripheral alloy, and a line of deeper color appears in the left obverse field. Softly struck with rub on the hair below the coronet.
From The Kiawah Collection. (#8950)

Flashy Near-Mint 1867 Double Eagle

2011 1867 AU58 NGC. Many coins in Mint State holders show less luster than this shimmering example. The yellow-gold surfaces, with strong undertones of rose in the fields, are frosty and essentially brilliant. There are a high number of marks on each side, but they are uniformly superficial.
From The Kiawah Collection. (#8951)

Alluring 1867 Double Eagle, MS61

2012 1867 MS61 PCGS. The intense mint luster has a distinctly frosty texture over the light wheat-gold and rose surfaces of this alluring specimen. Well struck throughout, the obverse and reverse are each peppered with small marks, preventing a higher grade assessment. Garrett and Guth note that examples of this issue are "popular as type coins for the Type 2 design." (#8951)

2013 1867-S AU50 NGC. A still-lustrous example of this earlier Type Two S-mint twenty, softly struck with light wear on the high points. Scattered abrasions are present in the fields.
From The Kiawah Collection. (#8952)

2014 1868 AU50 NGC. Giving the immediate impression of a Mint State example, this piece reveals a modest degree of high point wear under close examination. A surprisingly lustrous coin for the grade, with a few noticeable abrasions on each side, none of which are extreme. A scarce, low mintage issue of just 98,600 pieces.
From The Kiawah Collection. (#8953)

Captivating AU53 1868 Double Eagle

2015 1868 AU53 NGC. This Type Two double eagle issue with a five-figure mintage presents a challenge in virtually all grades. This still-lustrous orange-gold example exhibits only modest wear across the softly struck high points. Light to moderate abrasions across the obverse contribute to the grade. (#8953)

2016 1868-S AU55 PCGS. Displaying nearly full luster over bright yellow-gold surfaces, this piece gives the immediate impression of a Mint State coin. Numerous small to moderate marks are noted on each side, and slight friction on Liberty's hair detail helps to confirm the grade of this still-impressive Choice AU example. (#8954)

2017 1868-S AU55 NGC. Still lustrous and considerably above average for this Type Two issue, which has an average grade of 48.0 among all examples graded by NGC and PCGS. Numerous light to moderate abrasions appear in the fields. Liberty's highest curls and a few of the obverse stars are somewhat ill defined.
From The Kiawah Collection. (#8954)

Desirable 1868-S Twenty, MS61

2018 1868-S MS61 NGC. The Type Two double eagles as a group are highly elusive in Mint State, particularly San Francisco issues such as the 1868-S. This appealing orange-tinged example has subtle but pleasing luster. It is softly struck overall, with scattered light abrasions and a handful of more significant marks close to the obverse rim. Census: 11 in 61, 3 finer (6/09). (#8954)

2019 1869 AU55 NGC. Well struck and still lustrous, this Choice AU specimen displays apricot-gold toning and faint highlights of pale rose near the centers. The devices seem minimally worn, but a few moderate abrasions are noted on the obverse, including a heavy mark just below Liberty's eye. Attractive AU examples are scarce, according to Q. David Bowers.
From The Kiawah Collection. (#8955)

2020 1869-S AU53 PCGS. Though the obverse of this lightly circulated wheat-gold and lemon-yellow piece shows striking softness, the reverse is strongly detailed. Lightly abraded overall yet attractive.
From The Kiawah Collection. (#8956)

2021 1870 XF45 NGC. Luster clings to the design interstices of this yellow-gold Choice XF. Fairly well detailed except for weakness in portions of Liberty's hair. Distributed marks are visible over each side. (#8957)

High-End 1870 Double Eagle, AU53

2022 1870 AU53 NGC. According to Jeff Garrett and Ron Guth, authors of the *Encyclopedia of U.S. Gold Coins*: "The 1870 double eagle is surprisingly scarce in all grades. The number of coins graded by the major services is lower than most of the other Philadelphia Type 2 double eagles." This impressive AU53 representative offers surprisingly strong details for the grade. Showing only traces of high point wear and some wispy hairlines in the fields, this barely abraded piece should appeal to a discerning collector.
From The Kiawah Collection. (#8957)

2023 1870-S AU53 PCGS. Softly detailed as usual on the obverse, though the reverse is better-defined. Moderately abraded yellow-gold surfaces remain brightly lustrous.
From The Kiawah Collection. (#8959)

2024 1871 AU53 PCGS. Despite light wear, the yellow-orange surfaces of this P-mint double eagle remain brightly lustrous. Lightly marked overall with a vertical abrasion noted on Liberty's cheek. Population: 18 in 53, 44 finer (5/09).
From The Kiawah Collection. (#8960)

Rare 1871-CC Double Eagle, XF40

2025 1871-CC XF40 PCGS. As the second rarest Carson City double eagle, the 1871-CC is always in demand by collectors of this popular series. Only 17,387 pieces were produced, and it is reliably estimated that fewer than 150 coins survive in all grades. Carson City gold is a highly popular collecting specialty; examples are always in demand.

The present smooth yellow-gold example represents a median grade for the issue. Traces of luster are still visible in protected areas around the devices, and the surfaces are entirely free of consequential marks.

From The Sonoma Collection. (#8961)

2026 1871-S AU55 NGC. Luster dominates the reverse and outlines obverse design elements. Customary for the denomination and grade, the obverse is abraded, but there are no singular distractions. (#8962)

2027 1871-S AU55 PCGS. Luster fills the legends, coronet, and eagle, and brightens individual obverse stars. Only a shallow mark near the chin merits mention. A slender streak of struck-in grease passes through IN and the eagle's left (facing) wing. (#8962)

2028 1871-S AU58 NGC. Nearly full but satiny luster with moderate abrasions and an average strike. Easily available in grades through XF, this issue becomes quite difficult in conditions of AU and above.
From The Kiawah Collection. (#8962)

2029 1872 AU55 NGC. A good amount of luster occurs in the recessed areas of this Choice AU twenty dollar. Peach-gold surfaces reveal minute marks, more so on the obverse. The design features are well defined. (#8963)

2030 1872 AU58 NGC. This scarcer date double eagle would be considered Mint State by many viewers, but the obverse has perhaps too many small marks to attain a higher grade. Luster is nonetheless comprehensive, and no obvious high-point friction is present. (#8963)

2031 1872 AU58 PCGS. The 1872 twenty is usually found in VF or XF condition. Greenish-gold coloration graces both sides of this near-Mint State example, each of which possesses a good amount of luster. Light surface and rim marks are more prevalent on the obverse. From *The Kiawah Collection*. (#8963)

Appealing 1872-CC Double Eagle, XF40

2032 1872-CC XF40 ANACS. *Encyclopedia of U.S. Gold Coins* authors Jeff Garrett and Ron Guth describe the 1872 Carson City double eagle as "scarce but available." They also comment that this issue "must be considered a true condition rarity." This XF example is pleasingly well detailed, with even green-gold coloration and glimmers of original luster around the devices. Most of the scattered surface blemishes are trivial. From *The Kiawah Collection*. (#8964)

Lustrous 1872-CC Twenty, AU55

2033 1872-CC AU55 NGC. Bright luster outlines the legends and devices of this nicely struck and not unduly abraded Choice AU example. The cheek has only a whisper of friction. A minute alloy spot appears in the field near Liberty's nose. The low mintage of 26,900 pieces ensures that the 1872-CC is among the scarcer Carson City double eagles. Only a handful of Mint State pieces have been certified, and they are out of reach of all but the most determined collectors. From *The Sonoma Collection*. (#8964)

2034 1872-S AU55 NGC. Well struck for a Type Two double eagle with the fine details of Liberty's hair soft but visible. Though modest wear is visible on the devices, the peach-kissed yellow-gold fields remain brightly lustrous. (#8965)

2035 1872-S AU58 NGC. The peach-gold surfaces of this near-Mint State example retain luster in the recesses. The design elements are evenly struck. Minute marks are mostly seen on the obverse. (#8965)

2036 1872-S AU58 NGC. The mostly lustrous surfaces blend golden-rose and orange-gold colors. There is little evident wear, but the surfaces are noticeably abraded. A readily available issue in AU condition that immediately turns scarce in Mint State. From *The Kiawah Collection*. (#8965)

Remarkable MS60 1872-S Double Eagle

2037 1872-S MS60 NGC. An unworn representative of this popular Type Two double eagle issue, one that is elusive in Mint State. Though the obverse shows extensive abrasions that account for the grade, the lustrous orange-gold reverse is comparatively clean. NGC has 68 records of finer pieces (6/09). (#8965)

2038 1873 Closed 3 AU58 PCGS. A medley of mint-green, apricot, and lilac patination covers both sides of this AU58 coin, which retains a good amount of luster and is minimally marked. The piece is generally well struck and shows some reflectivity in the fields, especially those on the reverse. Population: 31 in 58, 19 finer (5/09). From *The Kiawah Collection*. (#8966)

2039 1873 Open 3 MS62 PCGS. This bright Uncirculated specimen shows lovely honey-gold coloration and intense, satiny mint luster. A few noticeable marks on the obverse limit the grade, while the reverse is surprisingly clean and would easily grade higher on its own merits. (#8967)

Desirable MS62 1873 Open 3 Twenty

2040 1873 Open 3 MS62 PCGS. A frosty and delightful representative of the later Open 3 logotype for the 1873 double eagle. This yellow-orange example is well struck for the date, if a trifle soft on Liberty's hair, and the luster, though subtle, is pleasing. Scattered wispy abrasions account for the grade. From *The Kiawah Collection*. (#8967)

Delightful 1873-CC Twenty, VF35

2041 1873-CC VF35 NGC. A light yellow-gold representative, this double eagle has extremely pleasing surfaces for a Carson City Mint survivor. Unlike with most early CC twenties, there are few marks on either side. The typical survivor is heavily abraded and quite unattractive. This piece is a delightful exception. From *The Kiawah Collection*. (#8968)

Appealing Choice VF 1873-CC Double Eagle

- 2042 1873-CC VF35 PCGS.** The mintage of 22,410 1873-CC double eagles puts this issue roughly on par with the 1872-CC twenty in terms of rarity, according to Garrett and Guth. The present example is pleasingly lustrous with strong honey-gold color. The level of detail is close to XF, though several long, thin abrasions are present in the fields. (#8968)

Elusive 1873-CC Twenty, AU53

- 2043 1873-CC AU53 PCGS.** When available the typical 1873-CC double eagle is well worn. It is scarce above XF, and NGC and PCGS combined have certified only two dozen coins in Mint State (5/09). This bright coin displays considerable remaining luster, especially on the reverse. There are light to moderate marks on each side. *From The Sonoma Collection.* (#8968)

- 2044 1873-S Closed 3 MS60 NGC.** Pale yellow-gold surfaces show slight elements of sun-gold near the rims. Sharply struck for the issue with no trace of wear, though extensive moderate marks account for the grade. More available than its Open 3 counterpart, but still a relatively scarce issue in Uncirculated condition. *From The Kiawah Collection.* (#8969)

Mint State Closed 3 1873-S Double Eagle

- 2045 1873-S Closed 3 MS61 NGC.** This sun-gold double eagle has ample luster and no more than the expected number of tiny abrasions. The Open 3 dies apparently arrived later in the year, since the Closed 3 variety is the more available, unlike the Philadelphia Mint 1873. Branch mint Type Two double eagles are scarce in Mint State. (#8969)

- 2046 1873-S Open 3 AU55 PCGS.** Well defined for the issue, with rich apricot-gold patina covering both sides. Traces of luster reside in the protected areas, and marks are well distributed, somewhat more so on the obverse. *From The Kiawah Collection.* (#8979)

Pleasing 1873-S Open 3 Twenty, AU58

- 2047 1873-S Open 3 AU58 NGC.** This piece is fully lustrous and attractive, save for a trace of high point wear that keeps it from a Mint State grade. A tiny rim bruise is evident at 8 o'clock on the obverse. Otherwise the surfaces are exceptionally pleasing, with traces of light green and pale orange toning. (#8979)

- 2048 1874 MS60 NGC.** Boldly struck and highly lustrous, with lovely yellow-gold and rose toning. Moderately abraded on the obverse, limiting the grade. An appealing example of this scarcer issue in Mint State. *From The Kiawah Collection.* (#8970)

Tantalizing 1874 Double Eagle, MS61

- 2049 1874 MS61 PCGS.** Flashy luster embellishes the delightful yellow-orange surfaces. The strike is sharp, save for the usual softness on Liberty's hair. Scattered abrasions throughout are typical for this issue, which is seldom seen in Uncirculated condition. Any examples in better grades than the present piece would command a considerably larger premium. PCGS has certified just 23 pieces finer (6/09). (#8970)

- 2050 1874-CC XF45 PCGS.** Luminous butter-yellow surfaces show old-copper color across the worn high points. Lightly abraded overall but with considerable eye appeal nonetheless. (#8971)

Popular 1874-CC Double Eagle, AU53

- 2051 1874-CC AU53 PCGS.** The 1874-CC double eagle has the second-highest mintage among Carson City Mint issues. This example is quite lustrous and shows nearly complete remaining design definition on each side, except for a trace amount of wear on some of Liberty's hair detail. A relatively available date and an excellent choice for type purposes. *From The Kiawah Collection.* (#8971)

Attractive 1874-CC Twenty, AU55

- 2052 1874-CC AU55 NGC.** A plentiful Carson City issue that is generally available in almost any grade desired, short of Mint State. The 1874-CC had a production of 115,085 coins, the first high mintage issue from that mint. The present Choice AU piece has lustrous surfaces with minor abrasions that are consistent with the grade.
From The Sonoma Collection. (#8971)

Choice AU 1874-CC Double Eagle

- 2053 1874-CC AU55 PCGS.** An attractive butter-gold Choice AU twenty that has fewer than the expected number of small abrasions. Luster is particularly plentiful on the reverse. Double eagle coinage at Carson City increased in 1874, yet remained less than one-tenth of San Francisco production.
Ex: Long Beach Signature (Heritage, 2/2005), lot 9086, which realized \$3,220.
From The Sonoma Collection. (#8971)

Desirable 1874-S MS61 Double Eagle

- 2054 1874-S MS61 PCGS.** The partially reflective fields and interstices highlight the relief features, especially when the coin is tilted slightly under a light source. Apricot-gold surfaces display occasional splashes of mint-green and are well struck. Small marks limit the grade. The 1874-S is seldom seen any finer than this piece.
From The Kiawah Collection. (#8972)
- 2055 1875 MS61 NGC.** Lustrous and well struck. The surfaces are not overly abraded for the MS61 grade level and have good eye appeal, despite a noticeable mark on the nose and several moderate field marks that also appear on the obverse. The double eagle is the only 1875 gold denomination from Philadelphia that is not a great rarity, and hence affordable in the higher grades.
From The Kiawah Collection. (#8973)

- 2056 1875 MS61 PCGS.** This stunning Type Two twenty has rich yellow-gold coloration with frosty luster. Hints of deeper toning are protected within the devices, and a trace of lighter gold color is noted on Liberty's cheek.
From The Sonoma Collection. (#8973)

Lovely 1875 Double Eagle, MS62

- 2057 1875 MS62 PCGS.** A highly lustrous and attractive Mint State piece, this double eagle has frosty and brilliant yellow-gold surfaces with modest, grade-consistent abrasions. A condition rarity; examples are seldom seen any finer, although PCGS has certified 51 higher grade pieces (5/09). (#8973)
- 2058 1875 MS62 ICG.** The 1875 double eagle is a popular representative of the date, as other gold denominations in that year were struck in exceptionally low quantities at the Philadelphia Mint. The honey-gold surfaces of this MS62 coin are relatively well defined. Scattered grazes and scuffs result in occasional interruptions in the luster flow. (#8973)
- 2059 1875-CC AU50 PCGS.** Luster clings to the protected areas of this yellow-gold CC-mint example. Nicely defined and lightly marked.
From The Kiawah Collection. (#8974)

Brilliant 1875-CC Twenty, AU58

- 2060 1875-CC AU58 NGC.** For the collector who desires a single Carson City Mint double eagle to represent the days of the Old West, the present piece is an excellent candidate. It is brilliant and lustrous, with light green-gold surfaces. The fields are relatively mark-free, and the eye appeal is excellent.
From The Sonoma Collection. (#8974)
- 2061 1875-S MS61 PCGS.** Strongly lustrous yellow-orange surfaces show a dot of alloy above the A in STATES. Well-defined and appealing despite a number of light abrasions in the portrait area.
From The Kiawah Collection. (#8975)

Well Struck MS62 1876 Double Eagle

- 2062 1876 MS62 NGC.** Light Motto subtype, an obscure reverse design change seen only on selected 1876 double eagles. Presumably the hub would have been used in 1877 as well, but the reverse was again modified that year to spell out DOLLARS. An orange-gold representative with dynamic luster, a pleasing strike, and rich pumpkin-gold patina. (#8976)

Sharp 1876 Twenty Dollar, MS62

- 2063 1876 MS62 PCGS.** Yellow-gold surfaces display occasional whispers of apricot. The design features are mostly well defined except for the usual softness in portions of Liberty's hair. Minute marks are scattered over both sides. The 1876 is one of the more available issues for the type, though Select and finer coins are elusive. *From The Kiawah Collection.* (#8976)

- 2064 1876-CC XF45 NGC.** Pockets of luster are plentiful on this popular date Carson City twenty. The strike is good and the obverse is typically abraded. The final year of the conditionally elusive Type Two design. (#8977)

- 2065 1876-CC XF45 NGC.** The bright brassy-gold surfaces of this Choice XF twenty reveal small distributed marks over both sides. Nicely detailed save for high-point wear. (#8977)

- 2066 1876-CC XF45 PCGS.** A bright, well-detailed, and evenly worn example with substantial luster and deep, rich golden-orange and green coloration. The fields show a number of small abrasions and wispy marks but few overt abrasions. *From The Sonoma Collection.* (#8977)

- 2067 1876-CC AU50 NGC.** This Type Two Carson City double eagle has pleasing detail, and the remaining luster is particularly prominent on the reverse. A strong lens reveals hair-thin obverse field marks beneath the hairbun. (#8977)

- 2068 1876-CC AU53 NGC.** Although Morgan dollars first come to mind when the Carson City Mint is considered, double eagles from the legendary Western facility are also coveted by collectors. They are certainly much scarcer, particularly in Mint State, since there was no gold equivalent to a GSA hoard. This is a lightly circulated AU example whose only mentionable mark is relegated to the arrowheads. (#8977)

- 2069 1876-CC AU53 NGC.** A broadly luminous example of this final Type Two Carson City double eagle issue, dusky yellow-orange with light wear that appears mostly on the devices, though the fields are slightly affected. Minor, scattered marks and a more significant vertical abrasion on Liberty's cheek contribute to the grade. (#8977)

Splendid Choice AU 1876-CC Twenty

- 2070 1876-CC AU55 NGC.** Pleasantly lustrous fields accent the green-gold patina that covers both sides. Peppered abrasions are typical for the grade and issue, but none are of any significance. Liberty's hair shows some softness, as usually seen, but the stars and reverse show excellent definition. (#8977)

Bold 1876-CC Double Eagle, AU55

- 2071 1876-CC AU55 NGC.** This Centennial-year CC-mint double eagle is boldly impressed, and the reverse retains most of its initial luster. Obverse luster encircles the stars and fills the coronet and hair. No marks are worthy of comment, aside from a reed mark above the jaw and a thin mark above the right (facing) wing. *From The Kiawah Collection.* (#8977)

Popular 1876-S Double Eagle, MS62

- 2072 1876-S MS62 PCGS.** Despite the rather large mintage of 1.597 million pieces, Uncirculated coins such as this lustrous MS62 example are always in demand. A decisive strike results in sharp definition on most of the design elements, save for portions of Liberty's hair. Golden-tan surfaces reveal a few minute contact marks, a bit more so on the obverse.
From The Kiawah Collection. (#8978)

Impressive MS62 1877 Twenty Dollar

- 2073 1877 MS62 NGC.** A sharply struck and shining representative of this initial Type Three issue, primarily wheat-gold with occasional pink and orange accents. A condition rarity, the date is seldom found any better than the present example. NGC has certified 14 finer pieces (5/09).
From The Kiawah Collection. (#8982)

- 2074 1877-CC XF45 PCGS.** Bright luster outlines design elements, and the portrait shows only minor wear, mostly on the curl high points. Small marks are scattered and of little import. Carson City mintages dropped significantly in 1877 while San Francisco double eagle production increased, suggesting that Nevada mine owners bypassed the local mint in favor of shipping bullion to California by rail. (#8983)

- 2075 1877-CC XF45 NGC.** Green-gold coloration runs over both sides of this Choice XF twenty dollar and relatively strong detail shows on the design elements despite high-point wear. A few minute marks are consistent with a coin having seen some circulation. (#8983)

- 2076 1877-CC XF45 PCGS.** Ex: Rainy Day Collection. Variety 1-A. Considerably scarcer than the 1874 through 1876 Carson City issues, the 1877-CC also has a lower mintage, as only 42,565 pieces were struck. An attractive piece for the grade; pleasing luster hugs the borders and the surfaces are not unduly marked. Clash marks from the shield are found near Liberty's ear.
From The Sonoma Collection. (#8983)

Attractive 1877-CC Twenty, XF45

- 2077 1877-CC XF45 PCGS.** Light yellow surfaces retain traces of luster on each side of this Choice XF double eagle. Trivial surface marks on each side are consistent with the grade. This 1877-CC double eagle combines its representation of the popular Western Mint with the first year of issue for a design modification. (#8983)

- 2078 1877-CC—Obverse Graffiti—NCS. AU Details.** The lower right obverse field has curly pinscratches and both sides are hairlined, but this Carson City double eagle has ample luster and minimal wear. (#8983)

Pleasing AU 1877-CC Double Eagle

- 2079 1877-CC AU50 NGC.** The 1877-CC had a modest mintage of just 42,565 pieces, and was the first Type Three double eagle to emerge from the Carson City Mint. This is a nice example for the grade, with no more than the usual amount of high point wear, and showing considerable semiprooflikeness in the fields. Only superficial marks and hairlines are found on either side.
From The Kiawah Collection. (#8983)

Desirable 1877-CC Twenty Dollar, AU55

- 2080 1877-CC AU55 PCGS.** In 1877, the Mint modified the design of the double eagle by changing the value from TWENTY D. to TWENTY DOLLARS. As Douglas Winter indicates (2001), "it presents the only significant design change for the gold coinage from this mint." The yellow-gold surfaces of this Choice AU specimen exhibit well defined devices. Minute abrasions are slightly more prevalent on the obverse. (#8983)

- 2081 1877-S MS61 PCGS.** Strong yellow-gold luster with orange undercurrents. Though this sharply struck Type Three twenty shows numerous light to moderate abrasions, the eye appeal remains strong. (#8984)

**Scarce Uncirculated 1877-S Twenty
Repunched Final A in AMERICA**

- 2082 1877-S MS61 PCGS.** 1877 was the first year of the Type Three reverse hub, which may help explain why the final A in AMERICA is widely repunched. This transitional hub engraving blunder is reminiscent of the FS-801 1866 double eagle, which has broad repunching on the N in IN. Nicely struck and lustrous, with rich peach toning and scattered small to moderate marks. (#8984)

- 2083 1877-S MS61 PCGS.** Brightly lustrous with pale yellow-gold centers that deepen close to the rims. This well-defined Type Three S-mint twenty shows scattered abrasions on the obverse that contribute to the grade.
From The Kiawah Collection. (#8984)

Flashy 1878 Double Eagle, MS62

- 2084 1878 MS62 NGC.** A flashy green and yellow-gold coin with glassy, reflective surfaces and plenty of eye appeal. There are numerous trivial to moderate contact marks on the coin's prooflike surfaces that account for the MS62 grade assessment. This Philadelphia Mint issue becomes elusive any finer, with an approximate fivefold price increase at the next grade increment.
From The Kiawah Collection. (#8985)

Elusive 1878-CC Twenty Dollar, XF40

- 2085 1878-CC XF40 PCGS.** Variety 1-A, attributed by the vertical die scratch on Liberty's neck and two minute die lumps to the right of the second T in TWENTY. Pale lime-gold and rose coloration permeates the attractively smooth and mildly lustrous surfaces of this XF example. Boldly struck and evenly worn, with a single noteworthy abrasion in the lower right obverse field, below Liberty's hair bun. An elusive, low mintage issue from the Carson City Mint.
From The Kiawah Collection. (#8986)

Appealing Choice XF 1878-CC Twenty

- 2086 1878-CC XF45 PCGS.** Ex: Rainy Day Collection. The portrait has light rub on the hair and cheek. The remaining luster is both pervasive and moderately prooflike, and the only abrasion of any relevance is a shallow, curving mark in the lower right obverse field. The 1878-CC is considerably scarcer than the Carson City dates from 1874 to 1876. Only 13,180 pieces were struck.
From The Sonoma Collection. (#8986)

- 2087 1878-S MS61 NGC.** An attractive Mint State example with lovely apricot and lime-gold toning. Well struck throughout, except for the slightly mushy mintmark. Second year of the Type Three design, with a moderate number of Uncirculated survivors.
From The Kiawah Collection. (#8987)

Doubled-Die Reverse 1879 Twenty, MS61

- 2088 1879 MS61 PCGS.** FS-801. The reverse is obviously die-doubled, especially on UNITED STATES, TWENTY, and PLURIBUS. *Cherrypickers'* refers to the variety as "an extremely strong doubled-die reverse." A lustrous example of this relatively low mintage issue. The sun-gold surfaces display the expected number of small marks. (#8988)

**1879 Doubled Die Reverse Twenty Dollar
FS-801, MS61**

- 2089 1879 MS61 PCGS. FS-801.** A strongly die doubled reverse, especially evident on E PLURIBUS, TWENTY, and UNITED STATES OF. This is a sharply struck example whose honey-gold surfaces reveal just an occasional break in the luster flow. Minute marks are noted over each side. The Doubled Die Reverse notation is absent from the insert.
From The Kiawah Collection. (#8988)

Tempting MS62 1879 Twenty

- 2090 1879 MS62 PCGS.** Impressively detailed with ample frosty-satiny luster across the broad surfaces, yellow-gold with subtle orange tints. Though wispy abrasions preclude Select status, this coin's remarkable eye appeal should make it far more desirable than a run-of-the-mill MS62 example. Population: 31 in 62, 6 finer (5/09). (#8988)

Low Mintage 1879-CC Double Eagle, XF40

- 2091 1879-CC XF40 PCGS.** A scarce low mintage issue from the Carson City Mint, the 1879-CC double eagle had a minor production of just 10,708 coins. This attractive XF survivor boasts pleasing tawny-gold coloration and considerable remnants of the original mint luster for the grade. Well struck, with few noticeable surface marks.
From The Kiawah Collection. (#8989)

XF Sharpness 1879-CC Twenty

- 2092 1879-CC—Improperly Cleaned—NCS. XF Details.** A tiny mintage of 10,708 pieces makes the 1879-CC a much better date, even by Carson City standards. For example, the 1876-CC mintage was more than 10 times higher. This moderately circulated peach-gold example has ample luster, particularly on the reverse, but the coin is slightly bright and glossy from cleaning. A pinscratch is noted near the final A in AMERICA. (#8989)

Low-Mintage 1879-CC Twenty, AU Details

- 2093 1879-CC—Improperly Cleaned—NCS. AU Details.** The 1879-CC mintage figure of 10,708 pieces is one of the lowest for any Carson City double eagle. The honey-gold surfaces of this AU Details example reveal fine hairlines under high magnification. Despite the light cleaning, traces of luster show in the recesses of the well struck design elements. A few light surface and rim marks are noted, as are a series of grease stains on the upper reverse. (#8989)

Scarce AU Details 1879-CC Double Eagle

- 2094 1879-CC—Improperly Cleaned—NCS. AU Details.** The surfaces show fine hairlines from cleaning, but the overall eye appeal is still quite good. All of the design elements are sharply defined, and traces of luster are evident in the protected area of the obverse. The reverse exhibits a full cartwheel effect. (#8989)

Lovely 1879-CC Twenty, AU50

- 2095 1879-CC AU50 PCGS.** The 1879-CC twenty is a predictably popular issue and a challenging Carson City double eagle, from a mintage of only 10,708 coins. This example is lightly abraded, with layers of reddish patina over semireflective surfaces. Population: 37 in 50, 62 finer (5/09).
From The Sonoma Collection. (#8989)

Well Struck 1879-S Double Eagle, MS61

- 2096 1879-S MS61 PCGS.** Many of the 1879-S double eagles were shipped overseas for international trade. Large numbers have returned in recent decades, most in XF or AU condition. A well executed strike leaves strong definition on this MS61 specimen. Yellow-gold surfaces reveal small marks over each side.
From The Kiawah Collection. (#8991)
- 2097 1880 AU58 NGC.** The luster is bright and nearly complete. A nicely struck example of this scarce, low mintage issue. Scattered trivial abrasions, but with no mentionable bagmarks. A scant 51,420 pieces were produced.
From The Kiawah Collection. (#8992)

Sharp 1880-S MS61 Double Eagle

- 2098 1880-S MS61 PCGS.** Large numbers of 1880-S double eagles entered circulation, leaving most well worn. Lower-level Mint State coins are somewhat scarce, Select and better pieces extremely so. The semiprooflike fields of this yellow-gold MS61 example yield modest variance with the sharply struck motifs. Distributed small marks limit the grade.
From The Kiawah Collection. (#8993)
- 2099 1881-S MS60 NGC.** A well struck piece with glassy, semiprooflike fields and lovely orange-gold toning over both sides. Numerous small abrasions keep the piece from a higher Mint State grade. (#8995)
- 2100 1881-S MS61 PCGS.** Yellow-gold surfaces exhibit sharp detail. Small marks scattered about result in occasional breaks in the luster flow. (#8995)
- 2101 1881-S MS61 NGC.** This intricately struck apricot-gold example has luminous luster and the expected number of individually unimportant bagmarks. The mintage of 727,000 pieces is relatively low for a San Francisco Mint twenty dollar from this era, and Mint State survivors are somewhat scarce.
From The Kiawah Collection. (#8995)
- 2102 1881-S MS61 NGC.** The cartwheel luster is unbroken across this attentively struck and moderately abraded representative. NGC has certified just three pieces in grades above MS62, since most Mint State examples paid their dues within loosely stored canvas bags. (#8995)

Appealing 1882 Double Eagle, AU58 Rarest Type Three Business Strike

2103 1882 AU58 ICG. The 1882 is the rarest Type Three double eagle in business strike form (571 pieces). Michael Fuljenz and Douglas Winter write in *Type Three Double Eagles, 1877-1907* that:

“... it must be ranked among the rarest 19th century American gold coins in any series. The few remaining examples generally grade Extremely Fine-45 to About Uncirculated-50. Any 1882 Double Eagle which grades About Uncirculated-55 is extremely rare and only two pieces are believed to exist in Mint State.”

Two grading services—NGC and PCGS—have actually certified four Mint State 1882 double eagles, the highest MS62. Indeed, those services have graded a total of 28 pieces in all levels of preservation (5/09).

The present ICG-certified AU58 coin displays attractive orange-gold patina imbued with splashes of mint-green on the obverse portrait. The fields are prooflike, as are those of virtually every 1882 business strike twenty. They establish notable contrast with the motifs, especially when the coin is rotated under a light source. A well executed strike delivers crisp definition to the design elements, including the reverse shield and eagle, areas that are sometimes soft. Distributed minute marks are visible over each side, but they are totally within the context of a large gold coin that has seen brief circulation.

Interestingly, Fuljenz and Winter say, “The great rarity of this date makes its eye appeal relatively unimportant. When examining a coin which is as rare as the 1882 Double Eagle, the collector cannot be overly concerned with eye appeal.” That this particular specimen yields exceptional eye appeal makes it all the more special for the connoisseur of rare gold coins. (#8996)

2104 1882-CC AU50 PCGS. Well-defined with bright wheat-gold luster. The devices show minimal wear, but several long, thin abrasions are noted in the right obverse field.
From The Sonoma Collection. (#8997)

2105 1882-CC AU53 PCGS. A softly lustrous, modestly worn Carson City twenty with bold lemon-yellow color. Scattered abrasions and a few peripheral alloy spots contribute to the grade.
From The Kiawah Collection. (#8997)

Bold 1882-S Double Eagle, MS62

2106 1882-S MS62 PCGS. Subtle hints of mint-green are scattered throughout the apricot-gold surfaces of this S-mint representative, and a well executed strike imparts strong delineation to the design elements. Light contact marks preclude a higher grade. Better-grade Mint State coins are difficult to locate.
From The Kiawah Collection. (#8998)

2107 1883-CC XF45 NGC. This Carson City twenty has pleasing sharpness, and much luster remains, especially on the reverse. Abraded near the date and chin, but highpoint wear is slight.
(#8999)

Attractive AU55 1883-CC Twenty Dollar

2108 1883-CC AU55 PCGS. Nicely struck with ample original luster. The vivid orange-gold surfaces have few marks compared to most pieces of this issue, and just a touch of light wear is noted on the devices. From a mintage of under 60,000 pieces, many of which were shipped overseas. Attractive overall appeal.
From The Kiawah Collection. (#8999)

Sharp Near-Mint 1883-CC Double Eagle

2109 1883-CC AU58 NGC. In his *Gold Coins of the Carson City Mint*, Doug Winter states: "It is very hard to find an 1883-CC double eagle relatively free of marks but a few such pieces do exist." This sharp near-Mint piece shows far fewer marks than most, with those flaws present shallow and short. The surfaces offer light yellow-gold luster, and just a touch of friction is present on the high points.
From The Sonoma Collection. (#8999)

2110 1883-S MS62 PCGS. Attractive mint-green and peach-gold toning adorns the lustrous surfaces of this Uncirculated double eagle from the San Francisco Mint. Well struck with a typical number of small to moderate abrasions for the grade. (#9000)

2111 1883-S MS62 PCGS. Bright yellow-gold surfaces exhibit sharply struck design elements and distributed minute marks. Some inoffensive purplish stains are visible in the upper left reverse quadrant. Most certified Mint State 1883-S coins are clustered in the MS61 to MS63 range; higher-grade pieces are extremely rare.
From The Kiawah Collection. (#9000)

2112 1884-CC AU53 NGC. Generally well struck, save for noticeable weakness along the tops of ERTY and on the eagle's right (facing) talons. A lustrous piece that has the look of a higher grade level. Lime-gold and peach toning with minor high point wear and scattered marks. An issue that type collectors favor.
From The Kiawah Collection. (#9001)

2113 1884-CC AU55 PCGS. Boldly struck with only minor wear on the high points and slight interruptions of the yellow-gold luster. The surfaces are barely marked on either side, though a few wispy hairlines reside in the fields, and several small alloy flecks are noted at the right obverse.
From The Sonoma Collection. (#9001)

2114 1884-S MS61 PCGS. An attractive piece with scintillating luster and delicate olive-gold toning. The reverse is actually quite clean, and would grade several points higher on its own merits, while the obverse shows a few grade-limiting abrasions. (#9002)

2115 1884-S MS62 NGC. A flashy, semiprooflike piece with lovely rose, peach, and lime-gold coloration. Well struck with a few noticeable abrasions on the obverse and only scattered, trivial marks on the reverse. This issue is readily available at MS62, but becomes quite scarce any finer.
From The Kiawah Collection. (#9002)

Pleasing 1885-CC Double Eagle, XF45

- 2116 1885-CC XF45 NGC.** A satiny and surprisingly well detailed example of this Carson City twenty dollar issue. There are only the usual small marks and a typical degree of wear for the Choice XF grade level. According to Garrett and Guth: "The 1885-CC issue is scarce; in fact, it is one of the rarest Carson City double eagles struck in the 1880s."

From The Kiawah Collection. (#9004)

Appealing Choice XF 1885-CC Twenty

- 2117 1885-CC XF45 PCGS.** Ex: Rainy Day Collection. An attractive piece with ample glimmers of bright luster and comparatively clean surfaces. Production at the Carson City Mint ceased in early 1885, and coinage did not resume until 1889. Just 9,450 pieces were struck, a mintage below all other Carson City issues of the denomination aside from the 1870-CC and 1891-CC rarities.

From The Sonoma Collection. (#9004)

- 2118 1885-S MS62 PCGS.** A boldly impressed and immensely lustrous piece with butter-yellow color overall and hints of lavender-peach. Lightly abraded overall with a few more significant marks in the fields. (#9005)
- 2119 1885-S MS62 PCGS.** Well struck overall with glimpses of peach against otherwise yellow-gold surfaces. Several scattered abrasions and scrapes contribute to the grade. (#9005)
- 2120 1885-S MS62 PCGS.** Remarkably crisp striking details are evident on each side of this highly lustrous example, except for the rather mushy mintmark. Lovely honey-gold coloration is modified by occasional instances of rose and yellow-green patina. Typical small marks define the grade. (#9005)
- 2121 1885-S MS62 NGC.** A dazzling example with semiprooflike fields and even honey-gold coloration. The design elements are sharply struck throughout. Numerous small marks limit the grade.
From The Kiawah Collection. (#9005)
- 2122 1887-S MS61 NGC.** The base of the 7 in the date is repunched. A satiny and alertly struck Uncirculated example of this lower mintage S-mint issue. The obverse has typical marks for the grade. A couple of specks of aqua residue are noted near 10:30 on the reverse. (#9007)
- 2123 1887-S MS61 PCGS.** A scarcer issue due to a mintage of 283,000 pieces, the lowest for a San Francisco Liberty twenty aside from the introductory 1854-S and the briefly coined 1861-S Paquet Reverse and 1866-S No Motto. Boldly struck and lustrous with a typically bagmarked obverse. (#9007)

Alluring 1887-S Double Eagle, MS62

- 2124 1887-S MS62 PCGS.** Shimmering luster radiates from the yellow-orange surfaces of this crisply struck specimen. There are no marks of any significance on either side. Although fairly available in most grades, the 1887-S double eagle can be difficult to locate in the middle Uncirculated grades. PCGS has certified 58 pieces finer (6/09). (#9007)

Wonderful MS62 1887-S Twenty

- 2125 1887-S MS62 NGC.** A wonderful example and conditionally rare, with only 21 finer NGC-certified examples of the date. Only proofs were coined in Philadelphia during the year and no other mint produced any double eagles, so the 1887-S is the only business strike of that denomination. Peripheral turquoise patina enhances full satiny luster and light yellow surfaces.
From The Kiawah Collection. (#9007)
- 2126 1888 MS61 NGC.** An elegantly lustrous and pleasingly toned representative, with no distracting marks on either side. Well struck with a handful of abrasions and luster grazes—most on Liberty's face and neck or in the upper left obverse field—that seem relatively modest for the grade. (#9008)
- 2127 1888 MS62 NGC.** Light yellow-orange color overall with a touch of patina on each side. Well-defined, impressively lustrous, and displaying only a few significant abrasions, though they combine to preclude Select status.
From The Kiawah Collection. (#9008)
- 2128 1888 MS62 PCGS.** Doubled Die Reverse. FS-801. A strongly doubled die as well as a seldom-seen one. The doubling is evident over the entire reverse, but is most easily seen on the denomination. Sharply struck and lustrous. The grade-limiting abrasions are mostly seen on the obverse. (#9008)
- 2129 1888-S MS62 PCGS.** Variegated mint-green, orange, and lavender toning rests on the lustrous surfaces of this S-mint twenty. Sharply struck, with a scattering of grade-defining marks. (#9009)
- 2130 1888-S MS62 PCGS.** This delightful Liberty double eagle has brilliant rose-gold color with minor grade-consistent surface marks on each side. The strike is sharp and the overall eye appeal is excellent.
From The Kiawah Collection. (#9009)

Scarce 1889 MS62 Twenty Dollar

- 2131 1889 MS62 PCGS.** The 1889 double eagle is not only scarce in all grades, but it also becomes extremely rare in the middle and upper Mint State grades. NGC and PCGS have seen about 20 MS63 coins and none finer (6/09). This honey-gold MS62 specimen displays nearly complete luster and is well struck on all design elements. Scattered contact marks and scuffs, especially on the obverse, prevent a higher grade. (#9010)

Surprisingly Elusive 1889 Twenty, MS62

- 2132 1889 MS62 NGC.** With a mintage of just 44,070 coins, this is a surprisingly scarce date, especially in higher Mint State grades. Only 21 finer pieces have been certified, including just five at NGC (5/09). This highly lustrous example has rich rose-gold toning with minor surface marks.
From The Kiawah Collection. (#9010)

Delightful MS62 1889 Double Eagle

- 2133 1889 MS62 PCGS.** Sharply struck and fully brilliant with frosty yellow gold luster and hints of pinkish toning. Flashy fields show a number of shallow abrasions, but the eye appeal is top-flight for the MS62 grade. The 1889 double eagle is a rarity any finer, with only 16 such pieces known to PCGS (5/09).
From The Sonoma Collection. (#9010)

- 2134 1889-CC XF45 NGC.** Luster is ample on this lightly circulated double eagle. Abrasions are minor for the grade and are generally relegated to the obverse field. An elusive Carson City issue, since the facility only reopened after the inauguration of Benjamin Harrison. (#9011)

- 2135 1889-CC XF45 NGC.** Good striking details and still showing a remarkable amount of semiprooflikeness in the fields. Green-gold color predominates, with minor spotting on the lower obverse and numerous small- to medium-sized abrasions throughout. A scarcer Carson City double eagle.
From The Sonoma Collection. (#9011)

Challenging AU55 1889-CC Double Eagle

- 2136 1889-CC AU55 PCGS.** Although four years had passed since Carson City struck coins of any denomination, production remained low relative to its 1874 to 1876 double eagle mintages. Only 30,945 1889-CC twenties were issued, and most survivors are in XF to AU grades. The present example has extensive luster, rich sun-gold color, and no distracting marks. (#9011)

Popular Choice AU 1889-CC Twenty

- 2137 1889-CC AU55 NGC.** The surfaces of this greenish-gold example have mattelike luster with traces of pale pinkish-orange toning on both sides. Although relatively plentiful, this issue seems to garner considerable visibility due to the rarity of the similarly dated Morgan dollar issue.
From The Kiawah Collection. (#9011)

Desirable AU58 1889-CC Double Eagle

- 2138 1889-CC AU58 NGC.** The 1889-CC double eagle was the first twenty dollar issue struck by Carson City after its four-year hiatus during the first term of Grover Cleveland. This dusky AU58 example has hints of peach color visiting otherwise yellow-gold surfaces. Modestly marked with only a touch of friction across the high points.
From The Sonoma Collection. (#9011)

- 2139 1889-S MS62 PCGS.** Strong yellow-orange luster with occasional green overtones. Strongly struck and faintly luminous overall with abrasions near the coronet that account for the grade. (#9012)

- 2140 1889-S MS62 NGC.** Rich yellow-gold color with significant undercurrents of orange. Well-defined with several shallow but plainly visible abrasions on the obverse that combine to preclude Select status.
From The Kiawah Collection. (#9012)

- 2141 1889-S MS62 PCGS.** This frosty S-mint example shows deeply colored features and a few scattered abrasions. The reverse offers Select-level eye appeal. Housed in a green label holder.
From The Sonoma Collection.(#9012)

High-End MS63 1889-S Twenty

- 2142 1889-S MS63 NGC.** Few Select Mint State examples of any issue will ever be found with surfaces as clean as those of the current specimen. A mere handful of superficial milling marks are found on the lower half of the obverse. Bright and highly lustrous, with a fulsome satiny sheen across both sides and lovely lime-gold and rose toning. Census: 84 in 63, 4 finer (5/09). (#9012)

- 2143 1890 MS62 PCGS.** The golden-orange surfaces exhibit soft luster and sharply struck motifs. Minute contacts define the grade. (#9013)

- 2144 1890 MS62 NGC.** Rich yellow-gold color with slight variations near the rims. The strike is crisp, and aside from a few abrasions on and near the portrait, the eye appeal is strong.
From The Kiawah Collection.(#9013)

Lower Mintage 1890 Select Double Eagle

- 2145 1890 MS63 NGC.** The double eagles of 1890 were struck in limited numbers (75,940 circulation strikes). Most of the surviving coins grade MS60 to MS62. Select examples are very scarce, and higher-grade pieces are rare. The lustrous surfaces of this MS63 specimen display hints of mint-green and light tan complementing apricot-gold patina. This sharply struck piece is free from distracting marks. Census: 16 in 63, 5 finer (5/09). (#9013)

- 2146 1890-CC AU55 PCGS.** Splashes of apricot visit the brass-gold surfaces of this Choice AU specimen, and a well executed strike imparts strong definition to the design elements except for softness in some of the star centers. Luster resides in the recesses, and each side is minimally abraded. (#9014)

- 2147 1890-CC AU55 PCGS.** The cheek has light wear, but the fields offer substantial mint luster. A pleasing slider, as the surfaces are refreshingly free from detrimental bagmarks.
From The Sonoma Collection.(#9014)

Popular 1890-CC Double Eagle, AU58

- 2148 1890-CC AU58 NGC.** The mint luster extends across the fields and is essentially full. Careful evaluation is needed to locate any traces of friction. A few hairlines are evident beneath a loupe, but bagmarks are unusually few in number. The usual reverse with minor die doubling, especially visible on the LUR in PLURIBUS. A popular date for type collectors.
From The Kiawah Collection.(#9014)

- 2149 1890-S MS61 NGC.** Well-defined with strong and slightly satiny luster. Honey-yellow and tan-gold shadings prevail on this moderately abraded S-mint twenty.
From The Sonoma Collection.(#9015)

Desirable 1891-CC Twenty, AU50

- 2150 1891-CC AU50 PCGS.** Judging by the paltry mintage of 5,000 pieces for the 1891-CC twenty, the Carson City Mint seems to have spent the majority of its time for gold delivery in 1891 on the half eagle and eagle. Only the ultrascarc 1870-CC sports a lower production figure among CC-mint twenties. This lightly circulated example displays delicate reddish accents and a modest degree of prooflike luster in the areas surrounding the devices. Abrasions are fairly numerous, but not overbearing.
From The Sonoma Collection.(#9017)

- 2151 1891-S MS63 PCGS.** The 1891-S twenty, from a relatively high mintage of nearly 1.3 million pieces, is one of the most available issues of the 1890s. This Select offering is sharply struck with attractive peach-gold color laced with light green. Light marks result in minor breaks in the luster flow.
From The Kiawah Collection.(#9018)

- 2152 1891-S MS63 NGC.** Medium S, the more available of the two mintmark sizes found on this conditionally scarce issue. The reverse is lightly die doubled, visible on E PLURIBUS UNUM and the horizontal shield lines. A lustrous sun-gold example with scattered faint marks on the left obverse.
From The Bay State Collection, Part One.(#9018)

- 2153 1892—Cleaned—ANACS. Unc Details, Net AU50.** Yellow-orange surfaces are well-defined with no trace of wear. The luster is interrupted due to cleaning, and an abrasion passes through the hair over Liberty's ear.
From The Kiawah Collection.(#9019)

- 2154 1892-CC XF40 NGC.** This is a nicely defined piece despite the wear over the high points. Yellow-gold surfaces are bright and minimally abraded. (#9020)

2155 1892-CC—Cleaned—ANACS. AU Details, Net XF45. Bright, glossy, and hairlined, this lemon-gold Carson City Twenty has no shortage of small obverse marks. A scant 27,265 pieces were struck.

From The Sonoma Collection. (#9020)

2156 1892-CC AU50 PCGS. The borders display generous luster, as do the rays, eagle, and hair. Distributed minor marks are inconsequential for the grade. A scarcer Carson City issue, as only 27,265 pieces were struck. Encased in a green label holder.

From The Kiawah Collection. (#9020)

2157 1892-CC AU50 NGC. A difficult Carson City issue that is similar in rarity to the lower-mintage 1893-CC and is even scarcer at the Mint State level. This moderately abraded example has partially reflective yellow-gold fields and is sharply struck throughout.

From The Sonoma Collection. (#9020)

Delightful 1892-CC Double Eagle, AU53

2158 1892-CC AU53 NGC. The reverse has a single small splash of charcoal toning. Otherwise there are no distracting imperfections on either side. Considerable luster is still present in the protected areas. This wonderful piece has attractive light yellow surfaces with iridescent toning splashes. (#9020)

Pleasing 1892-CC Twenty, AU53

2159 1892-CC AU53 NGC. Moderate obverse and reverse abrasions account for the grade assigned to this pleasing double eagle. Both sides have considerable remaining luster, with deep steel patina on the high points, attesting to its originality. A wonderful representative of the Carson City double eagle coinage. (#9020)

Pursued AU55 1892-CC Double Eagle

2160 1892-CC AU55 NGC. Although no longer considered to be the formidable condition rarity that it once was, the 1892-CC is still difficult in better grades. Shimmering luster in the fields highlights the pleasing yellow-orange patina that covers both sides. A small mark northeast of the date is barely worthy of mention. (#9020)

Popular Choice AU 1892-CC Twenty

2161 1892-CC AU55 PCGS. The 1892-CC is a scarcer low-mintage issue and is, in fact, more difficult than the final year of issue (and even lower-mintage) 1893-CC. The reverse on this piece retains almost complete mint luster, while the obverse has the original sheen just surrounding the devices. Well struck, the medium orange-gold surfaces are minimally abraded.

Ex: Long Beach Signature (Heritage, 6/1999), lot 6629; Richard J. Chouinard Collection of United States Coins, Part Two (Heritage, 2/2005), lot 9228.

From The Sonoma Collection. (#9020)

Appealing 1892-CC Twenty, AU58

2162 1892-CC AU58 NGC. A boldly impressed near-Mint survivor with rich honey-gold color. Aside from a mark near the rim between stars 12 and 13 and a trace of friction on the high points, the preservation is impressive. Overall, a pleasing representative of this popular penultimate Carson City double eagle issue. (#9020)

2163 1892-S MS62 PCGS. A satiny representative whose yellow-gold surfaces display only moderate marks, generally confined to the obverse. Costly to secure any finer. (#9021)

Delightful Select 1892-S Double Eagle

- 2164 1892-S MS63 PCGS.** Strongly impressed with satiny butter-yellow luster that shows glimpses of apricot and a few small alloy spots on the reverse. Only a few wispy abrasions in the portrait area preclude a finer designation. While Select examples of this San Francisco twenty are available for a price, anything finer is scarce. (#9021)

Lovely Select Uncirculated 1892-S Twenty

- 2165 1892-S MS63 NGC.** The luminous surfaces of this Select example display lovely peach-gold toning, with underlying hints of mint-green coloration in the fields. The design elements are crisply struck, with nearly full definition evident on the obverse stars and the eagle's talons. A few trivial marks are found on each side of the piece. *From The Kiawah Collection.* (#9021)

- 2166 1893-CC AU50 PCGS.** Ex: Rainy Day Collection. A popular, low mintage issue with a higher than normal survival rate. This is a bright orange-gold example that is moderately abraded with significant portions of mint luster remaining around the devices. *From The Sonoma Collection.* (#9023)

Reflective 1893-CC Twenty, AU58

- 2167 1893-CC AU58 NGC.** This lemon-yellow example is a stunning 1893-CC double eagle, with sharp design features and fully reflective, nearly prooflike fields. Only a trace of rub on the highest design points prevents a Mint State grade. For the grade, this 1893-CC has few peers to represent the final Carson City issue. *From The Kiawah Collection.* (#9023)

Splendid 1893-CC Double Eagle, MS61

- 2168 1893-CC MS61 PCGS.** Eye-catching luster in the fields highlights deep pumpkin-orange and rose patina. Scattered abrasions define the grade, but none are particularly bothersome. A well-struck representative of the final Carson City Mint issue. Only 18,402 pieces were minted. (#9023)

Appealing MS62 1893-CC Double Eagle

- 2169 1893-CC MS62 PCGS.** Carson City struck just 18,402 double eagles in 1893 before minting operations there ceased for good. This MS62 example is well-defined with attractive sun-yellow luster that shows glimpses of straw and orange. Light, scattered abrasions contribute to the grade. This issue is a rarity any finer, with just 18 such pieces known to PCGS (5/09). (#9023)

Lustrous 1893-S Liberty Twenty, MS63

- 2170 1893-S MS63 PCGS. CAC.** Excellent strike and luster. The yellow-gold surfaces show glimpses of orange and a yellow-green. While this S-mint double eagle issue is readily available in lesser Mint State grades, anything finer than this Select coin is elusive. PCGS has certified just 37 finer examples (6/09). (#9024)

Delightful 1893-S Select Double Eagle

- 2171 1893-S MS63 PCGS.** The 1893-S double eagle, with a mintage approaching 1 million pieces, is readily available through MS62, as evidenced by PCGS/NGC figures. The lustrous surfaces of this Select specimen exhibit well struck design elements and delightful peach-gold color. A few minute marks preclude a finer grade.
From The Kiawah Collection. (#9024)

- 2172 1894 MS62 NGC.** The 1894 double eagle ranks among the common dates in the series with a mintage of well over 1 million coins, an ideal issue for type collectors. This highly lustrous yellow-gold example is boldly detailed with excellent eye appeal.
From The Bay State Collection, Part One. (#9025)

- 2173 1894 MS63 PCGS.** Yellow-gold lustrous surfaces give off a subtle greenish cast and a decisive strike imparts sharp delineation to the design features. A few minute marks define the grade.
From The Kiawah Collection. (#9025)

Sharply Impressed 1894 Twenty, MS64

- 2174 1894 MS64 NGC.** Large numbers of 1894 double eagles were struck (1.3 million-plus circulation strikes). Many were shipped overseas and are still returning to the States. This is apparent from the certified population data that show large numbers through the MS63 level. The population declines precipitously in near-Gem, and NGC and PCGS have graded a mere six examples finer (6/09).

This MS64 example displays honey-gold patina imbued with traces of mint-green. A well executed strike imparts sharp delineation to the design elements, and pleasing luster cascades over both sides. Scattered abrasions, including a short pinscratch in the field next to Liberty's nose, preclude Gem status. (#9025)

Elegant Choice 1894 Double Eagle

- 2175 1894 MS64 NGC.** A Choice sun-gold Type Three twenty whose lightly abraded surfaces exhibit booming luster and attractive eye appeal. The 1894 is plentiful in bagmarked condition, but unblemished pieces are elusive. NGC and PCGS combined have certified just six pieces finer (6/09). (#9025)

- 2176 1894-S MS62 NGC.** Booming, bright cartwheel shimmer dominates this well struck Type Three twenty. The obverse has distributed faint luster grazes, while the reverse on its own merits has the look of a higher grade.
From The Bay State Collection, Part One. (#9026)

- 2177 1894-S MS63 PCGS.** The bright yellow-gold surfaces of this Select S-mint twenty display traces of mint-green and lavender. Sharply struck and revealing scattered contact marks.
From The Kiawah Collection. (#9026)

- 2178 1895 MS61 NGC.** This lustrous representative has sun-gold centers bounded by sea-green fields. The strike is crisp, and although minor abrasions are scattered, none stand out aside from a moderate milling mark on the field near the profile.
From The Bay State Collection, Part One. (#9027)

- 2179 1895 MS64 PCGS.** This is a sharply detailed and highly lustrous near-Gem. The faint surface marks do little to detract from this coin's impressive eye appeal. PCGS has certified just two pieces finer (5/09).
From The Kiawah Collection. (#9027)

- 2180 1895-S MS63 PCGS.** Booming luster and attractive lemon toning endow this alertly struck Select double eagle. Smooth for the grade aside from a thin mark near the tip of the coronet.
From The Kiawah Collection. (#9028)

Exemplary Near-Gem 1896 Twenty Dollar

- 2181 1896 MS64 NGC. CAC.** Outstanding for the assigned grade, with undisturbed and lustrous olive-tinged surfaces. A loupe and patience locate only trivial grazes on the cheek. A well struck near-Gem that will leave many lot viewers wondering how it fell short of an even higher grade. NGC has certified only nine pieces finer (6/09). (#9029)

- 2182 1896-S MS62 PCGS.** Wafts of rose color mix with the mostly apricot-gold surfaces. Enticing satiny luster highlights the well-defined details. Most 1896-S double eagles are heavily bagmarked, but this specimen has only trivial abrasions on each side.
From The Bay State Collection, Part One. (#9030)

- 2183 1896-S MS63 PCGS.** A mix of apricot-gold and mint-green patination resides on the mostly lustrous surfaces of this Select S-mint twenty. The design elements are sharply delineated. Minute marks limit the grade. (#9030)

- 2184 1896-S MS63 NGC.** This lustrous Select offering possesses crisply struck devices save for minor softness in a couple of the obverse star centers. A scattering of minute marks defines the grade. Challenging in near-Gem and elusive any finer. (#9030)

- 2185 1896-S MS63 PCGS.** A medley of yellow-gold, mint-green, apricot, and ice-blue patination runs over the lustrous surfaces of this Select offering. These attributes, in combination with sharply struck devices, yield fairly nice appeal despite a few light surface and rim marks.
From The Kiawah Collection. (#9030)

Delightful Near-Gem 1897 Double Eagle

- 2186 1897 MS64 PCGS.** Despite a mintage over 1.3 million coins, the 1897 double eagle is virtually impossible to find in grades higher than MS64. Magnificent satiny luster radiates beneath the pleasing orange-gold patina. This carefully preserved piece would make an excellent representative in any collection. (#9031)

Scarce 1897 Twenty Dollar, MS64

- 2187 1897 MS64 PCGS.** Well struck and highly lustrous, with remarkably clean surfaces that only show a few minor contact marks and luster grazes. Lovely peach-gold and sea-green toning intermingles on both sides of this conditionally scarce near-Gem specimen. A common date in lower grades through MS63, but scarce at MS64 and rare any finer.
From The Kiawah Collection. (#9031)

Exceptional 1897-S Near-Gem Twenty

- 2188 1897-S MS64 PCGS.** The 1897-S twenty dollar is found in fairly large numbers in grades below MS63. Near-Gems are available with patience and a little searching, and higher-graded pieces are elusive. Additionally, as Jeff Garrett and Ron Guth say: "As with most Liberty Head double eagles, the surfaces of most coins seen are heavily abraded." The present near-Gem is certainly an exception. There are a few light marks and luster grazes to preclude full Gem status, but the lustrous yellow-gold surfaces laced with subtle hints of mint-green are essentially well preserved. The design elements are exceptionally well struck.
From The Kiawah Collection. (#9032)

Bold 1898 Select Double Eagle

- 2189 1898 MS63 PCGS.** A decisive strike delivers sharp detail to the design elements of this Select double eagle, and honey-gold lustrous surfaces display hints of olive-green. Small obverse contact marks limit the grade. MS63 appearances are not all that common, and higher-grade coins are seldom seen. PCGS has graded only seven coins finer (5/09).
From The Kiawah Collection. (#9033)

Brilliant 1898-S Twenty, MS64

- 2190 1898-S MS64 PCGS.** An important Liberty double eagle that is rarely found any finer, with just 76 Gem or finer pieces certified by PCGS. This Choice Mint State example is fully brilliant and highly lustrous with frosty yellow-gold surfaces and traces of greenish patina on each side. (#9034)

Entrancing Near-Gem 1898-S Twenty

- 2191 1898-S MS64 NGC. CAC.** The 89 in the date are lightly repunched at their bases. In his 1988 *Encyclopedia*, Breen credits Douglas Winter with the discovery of this variety. This is a delightful near-Gem with exceptionally intense luster and a paucity of minor marks. The strike is bold, and given the cost of a higher grade, the provided value is excellent. (#9034)

Impressive Near-Gem 1898-S Double Eagle

- 2192 1898-S MS64 PCGS.** Orange centers are bounded by lime-green fields. Lustrous and boldly struck with minimal marks. An impressive near-Gem of this popular large denomination gold type. Type Three S-mint twenties are an underrated but pursued segment of the gold market.

Ex: Long Beach Signature (Heritage, 2/2006), lot 3380, which realized \$2,185.

From The Kiawah Collection. (#9034)

Attractive 1898-S Twenty Dollar, MS65

- 2193 1898-S MS65 PCGS.** The 1898-S was struck in large numbers (more than 2.5 million coins), and as can be seen in PCGS/NGC population figures is plentiful in most grades. Indeed, nearly 30,000 specimens exist in grades MS60 to MS64. The certified population takes a sharp drop in MS65 and fewer than 10 pieces are graded higher (6/09). Attractive orange-gold luster imbued with traces of light green endows this Gem. An impressive strike delivers strong definition to the design elements, save for minor weakness in a few obverse stars. A few small marks are scattered about, somewhat more so on the obverse. Population: 74 in 65, 2 finer (6/09). (#9034)

Lustrous Near-Gem 1899 Double Eagle

- 2194 1899 MS64 NGC.** Well struck with crisp definition on all of the obverse design elements. On the reverse, only the eagle's upper left (facing) wing feathers are weak, and this is the result of die polish. Satiny overall with bright color and rich mint frost. A few bag marks are confined to Liberty's cheek and the left obverse field, perhaps preventing an even finer grade.

From The Kiawah Collection. (#9035)

Splendid MS64 ★ 1899 Twenty Dollar

- 2195 1899 MS64 ★ NGC.** Only four business strike 1899 double eagles have received a Star designation from NGC, two of which are certified in lower grades. Peach-gold surfaces display splendid luster, and a powerful strike leaves crisp definition on the design elements. A desirable near-Gem with only occasional unimportant contact. (#9035)

- 2196 1899-S MS63 PCGS.** An attractive and high-end S-mint example with fantastic luster that is minimally abraded for the grade. Great eye appeal for this turn-of-the-century issue.

From The Sonoma Collection. (#9036)

Conditionally Rare 1899-S Twenty, MS64

- 2197 1899-S MS64 NGC.** An important condition rarity, the 1899-S double eagle is usually available up to Choice Mint State but it is rarely found any finer. For example, NGC has only certified 10 finer pieces. This beauty has fully lustrous and satiny surfaces with greenish-gold fields and pale rose toning on the devices.

From The Kiawah Collection. (#9036)

- 2198 1900 MS64 NGC.** This apricot-tinted near-Gem has sweeping cartwheel luster and a well preserved reverse. The obverse field is also exemplary, although Liberty's face and neck exhibit subtle marks. (#9037)

- 2199 1900 MS64 NGC.** A well struck and rather prooflike near-Gem that has numerous wispy die polish lines in the reflective fields. The obverse field has a few minor luster grazes, but they have little impact on the considerable eye appeal.

From The Kiawah Collection. (#9037)

- 2200 1900-S MS63 NGC.** There is a halo of darker patina around the obverse periphery, but the overall appearance of this moderately abraded example is one of olive-gold color. Crisply impressed throughout.

From The Kiawah Collection. (#9038)

Scarce Near-Gem 1901 Double Eagle

- 2201 1901 MS64 PCGS.** A relatively low mintage of 111,430 pieces distinguishes the 1901 from the common-date P- and S-mint issues of the era. This boldly impressed near-Gem has scintillating luster and attractive peach-gold patina. Minor marks on the cheek and near the mouth are all that limit the grade. Housed in a green label holder. (#9039)

Lovely MS64 1901 Double Eagle

- 2202 1901 MS64 PCGS.** Scintillating satiny luster enhances the eye appeal of this lemon-yellow representative. The strike is sharp, and there are no marks of any consequence. After a mintage of nearly 2 million double eagles in 1900, the Philadelphia Mint produced only 111,430 examples in 1901. (#9039)

Elusive 1901 Twenty Dollar MS64

- 2203 1901 MS64 PCGS.** A lustrous sun-gold near-Gem that has clean fields and only a few shallow grazes on the cheek. The base of the first 1 in the date is repunched. A lower mintage issue and a popular alternative to the common 1904. In a green label holder. *From The Kiawah Collection.* (#9039)

Low Mintage Near-Gem 1901 Twenty

- 2204 1901 MS64 NGC.** A beautiful example with clean fields and thick, rich luster. Although there is a moderate-sized copper spot at the lower portion of the reverse by the left-hand scroll and a smaller one above the E in TWENTY, the overall appeal is close to Gem. *From The Sonoma Collection.* (#9039)

- 2205 1901-S MS62 PCGS.** Dynamic luster and an exacting strike add eye appeal to this attractive representative. The reverse is unexpectedly unabraded, and the obverse has no more than the expected number of scattered marks. (#9040)

- 2206 1901-S MS62 PCGS.** Although the silver 1901-S Barber dimes, quarters, and halves are known for their scarcity or rarity, it is a different story for the 1901-S half eagle, eagle, and double eagle. Those three gold issues are plentiful in Mint State. The present canary-gold example has blazing luster and a modicum of small marks, along with a short scratch left of the mintmark. (#9040)

Appealing 1901-S Twenty Dollar, MS63

- 2207 1901-S MS63 PCGS.** Low-grade to MS62 1901-S double eagles are fairly abundant due to the repatriation of overseas shipments in recent decades. Select pieces can be located with patience, near-Gems are challenging, and anything finer is elusive. Peach-gold and mint-green surfaces exhibit sharply impressed design elements and pleasing luster. While a scattering of minute marks limits the grade, this coin still generates nice overall appeal. *From The Kiawah Collection.* (#9040)

Elegant 1901-S Select Double Eagle

- 2208 1901-S MS63 NGC.** Peach-gold and mint-green colors compete for territory on the lustrous surfaces of this Select S-mint double eagle. A well executed strike leaves strong detail on the design features, including Liberty's hair curls. A scattering of small marks denies a higher grade. The '01-S is fairly abundant through MS62, after which the population tapers off. (#9040)

Lustrous 1902 Double Eagle, MS62

- 2209 1902 MS62 PCGS.** Flashy luster accents the yellow-gold toning that covers both sides of this boldly struck representative. Peppered abrasions limit the grade, but none are particularly prominent. The 1902 double eagle boasts a surprisingly low mintage and is seldom seen in grades higher than the present example. (#9041)

Lovely MS62 1902 Double Eagle

- 2210 1902 MS62 PCGS.** This is a lovely Philadelphia Mint double eagle with bright, coruscating luster and enticing lime-gold and apricot toning. The design elements are reproduced crisply and completely on each side. The requisite quantity of wispy marks is noted for the grade, most on the obverse fields. A conditionally scarce issue with a tiny mintage of just 31,140 pieces.
From The Kiawah Collection. (#9041)

Charming MS62 1902 Twenty

- 2211 1902 MS62 PCGS.** Richly frosted with remarkably attractive yellow-orange luster that enlivens faintly abraded surfaces. Along with the 1905 and 1906, the 1902 is one of the keys to the 20th century Liberty double eagle series, all of them boasting low mintages (such as 1902's output of just 31,140 business strikes). PCGS has graded 69 finer examples (5/09).
From The Sonoma Collection. (#9041)

Wonderful MS63 1902-S Double Eagle

- 2212 1902-S MS63 PCGS.** Rich, swirling yellow-gold luster adds vibrancy to this slightly satiny S-mint double eagle. The strike is crisp, and aside from a handful of abrasions in the right obverse field, the overall preservation is excellent. Elusive any finer, with just 55 such pieces known to PCGS (5/09). (#9042)

Attractive 1902-S Select Double Eagle

- 2213 1902-S MS63 PCGS.** A good portion of the 1.7 million-plus mintage of the 1902-S double eagle was sent to Europe or South America for international trade. Returning specimens make the date easy to acquire through MS62. Select examples can be obtained with a bit of searching, and higher-grade specimens are scarce to rare. Orange-gold and mint-green patina graces the lustrous surfaces of this sharply struck MS63 offering. Distributed marks prevent a higher grade, but this is still a nice-looking coin.
From The Kiawah Collection. (#9042)

Brilliant 1902-S Twenty, MS63

- 2214 1902-S MS63 PCGS.** A satiny beauty with brilliant orange-gold toning and light surface marks that limit the grade and keep it out of the condition rarity class. With a mere 55 finer examples in PCGS holders (5/09), the MS63 grade is the highest obtainable grade for a moderate price. (#9042)

2215 1903 MS64 NGC. A semi-prooflike honey-gold Choice double eagle that has a splendidly preserved portrait and reverse. The obverse field shows only minor marks. A lower mintage than usual, but a number have survived at the MS64 level. (#9043)

2216 1903 MS64 NGC. Well struck throughout, with gleaming luster and visually intoxicating honey-gold and pale rose coloration. A few trivial obverse marks preclude the Gem grade designation. *From The Kiawah Collection.* (#9043)

Pleasing 1903 Double Eagle, MS65

2217 1903 MS65 NGC. The 1903 double eagle has a relatively low mintage of 287,270 circulation strikes, but a sufficient number of Mint State coins are extant, particularly through the near-Gem level of preservation. Gems become somewhat scarce and higher-grade pieces are extremely rare. To date (6/09) NGC and PCGS have graded a mere 10 MS66 examples and none higher. Vibrant luster endows this Gem offering and a decisive strike lends sharp definition to the design elements. Attractive yellow- and peach-gold patina bathes both sides, each of which reveals just a few small marks. *From The Bay State Collection, Part One.* (#9043)

2218 1903-S MS64 PCGS. The radiant peach surfaces have occasional peripheral lime tints. A sharply impressed example with pleasing cartwheel luster and a well-preserved reverse. The upper half of the portrait displays a few moderate abrasions. PCGS has graded just eight coins finer (5/09). *Ex: Palm Beach Signature (Heritage, 3/2006), lot 2095, which realized \$3,220.* *From The Kiawah Collection.* (#9044)

2219 1904 MS64 PCGS. Rich sun-gold peripheral zones pale to canary-yellow at the centers. A well-defined and brightly lustrous near-Gem example of this popular type issue, housed in a small-format PCGS holder. *From The Kiawah Collection.* (#9045)

2220 1904 MS64 PCGS. This lemon-gold near-Gem features potent luster and an alert strike. The 1904 is a commonplace issue, but the present piece is surprisingly devoid of the faint marks that generally frequent this loosely stored and shipped series. *From The Bay State Collection, Part One.* (#9045)

Excellent Gem 1904 Double Eagle

2221 1904 MS65 NGC. The 1904 is a popular type coin because of its high mintage, and this appealing Gem would certainly make an excellent representative. Hints of rose color mingle with the yellow-gold patina that envelops both sides. The centers are a little soft, as often seen, but the surfaces are remarkably unabraded. (#9045)

Dazzling 1904 Double Eagle, MS65

2222 1904 MS65 NGC. A resplendent Gem with a pleasing circle of rich yellow patina around a lighter center. The strike is nearly full and the surfaces have only a few grade-defining abrasions. While the 1904 is available in almost all grades, the number of certified examples drops significantly finer than MS65. (#9045)

2223 1904-S MS64 PCGS. Flashy yellow-gold surfaces offer considerable reflectivity. A sharply struck near-Gem representative of this higher-mintage San Francisco issue. *From The Kiawah Collection.* (#9046)

Popular Gem 1904-S Twenty

2224 1904-S MS65 PCGS. Crisply detailed with bright yellow and sun-gold surfaces. Excellent preservation and eye appeal to match. Though the 1904-S is readily available in grades through Choice, this type issue is elusive in Gem and prohibitively rare any finer, with just two such pieces known to PCGS (5/09). (#9046)

Magnificent 1904-S Double Eagle, MS65

- 2225 1904-S MS65 NGC.** An attractive ring of apricot patina surrounds the lemon-yellow centers of this carefully preserved and lustrous Gem. The design elements are powerfully impressed save for some softness on a few stars. The collector will be hard-pressed to find a better representative. NGC has certified only one piece finer (6/09).
From The Bay State Collection, Part One. (#9046)

- 2226 1905 MS61 NGC.** Well struck with light, scattered marks on both sides, most notably a pair below the base of the bust. Overall, appealing for the grade and the low-mintage issue.
From The Kiawah Collection. (#9047)

Low Mintage 1905 Double Eagle MS62

- 2227 1905 MS62 NGC.** Only 58,919 business strike double eagles were struck at the Philadelphia Mint in 1905. Presumably, Treasury vaults were still clogged with examples of the nearly 11.4 million pieces coined the prior year, including those made at San Francisco. The present 1905 is less abraded than most others at the MS62 level, although the luster is slightly muted across the open obverse field. NGC has certified only 13 pieces finer (6/2009).
From The Sonoma Collection. (#9047)

Sharp 1905-S Select Twenty Dollar

- 2228 1905-S MS63 PCGS.** The fields and interstices of this Select S-mint specimen display a fair degree of reflectivity leading to mild field-motif contrast, slightly more so on the reverse. Yellow-gold surfaces exhibit sharply defined design features. Minute marks limit the grade. Scarce any finer.
From The Kiawah Collection. (#9048)

Beautiful 1905-S Double Eagle, MS63

- 2229 1905-S MS63 PCGS.** The 1905-S double eagle issue has less than half the mintage of its counterpart from the year before, and it is elusive any finer than this Select example. The strike is bold, and the lustrous yellow-gold surfaces show occasional orange and rouge accents. Only lightly abraded for the grade. (#9048)

- 2230 1906 MS62 PCGS.** An impressive strike leaves sharp detail on the design elements. Lustrous surfaces have a mixture of peach and light green patina and are lightly marked, slightly more so on the obverse.
From The Kiawah Collection. (#9049)

- 2231 1906 MS62 PCGS.** This yellow-gold double eagle has good cartwheel luster and lacks individually consequential marks. On its own merits, the reverse has claims to a higher grade. An above-average example of this scarce issue. Just 69,596 pieces were struck, perhaps due to a continuing backlog from the remarkable 1904 production.
From The Sonoma Collection. (#9049)

Intriguing MS63 1906-D Double Eagle

- 2232 1906-D MS63 PCGS.** A vibrant, slightly frosty Select example of the Denver Mint's first double eagle issue. Light yellow-gold centers deepen slightly near the margins. Small, scattered marks are typical for the grade, though a more significant disturbance is noted below the eagle's right (facing) wing. (#9050)

Select Mint State 1906-D Twenty Dollar

- 2233 1906-D MS63 PCGS.** This Select Mint State piece exhibits orange-yellow color with nice, satiny luster. No significant detractors are found on either side of this well produced specimen, from the first Denver Mint double eagle issue. This is a popular date, as one of only two Liberty Head twenty dollar productions from Denver.
From The Kiawah Collection. (#9050)

Attractive Near-Gem 1906-D Double Eagle

2234 1906-D MS64 NGC. Pleasing frosty luster complements the straw-yellow patina that envelops the surfaces. Liberty's hair is a little soft, but the rest of the details are boldly impressed. A few minuscule grazes on Liberty's cheek are consistent with the grade. Although near-Gem specimens are available, Gem examples are decidedly rare. NGC has certified only a dozen pieces finer (6/09). (#9050)

2235 1906-S MS63 NGC. An attractive Select double eagle that boasts dynamic luster and a good strike. Although small marks are present, none significantly distract from the eye appeal. (#9051)

2236 1906-S MS63 PCGS. Light yellow-gold centers cede to deeper orange color close to the rims. An appealing Select piece from late in the Longacre double eagle series.
From The Kiawah Collection. (#9051)

2237 1907 MS64 NGC. Sharply struck with pleasing luster and a mix of orange-gold and mint-green color. A few marks deny Gem status. Difficult to locate any finer. (#9052)

2238 1907 MS64 PCGS. Well-defined with richly lustrous sun-yellow surfaces that lighten slightly in the centers. Strongly struck for this final-year Coronet double eagle issue. PCGS has graded just 11 finer pieces (5/09).
From The Kiawah Collection. (#9052)

2239 1907-D MS63 NGC. A decisive strike leaves sharp definition on the devices of this Select offering. Highly lustrous surfaces are minimally abraded and display pretty yellow-gold coloration. (#9053)

2240 1907-D MS64 PCGS. The second and final Denver Mint Liberty twenty is collectible at the MS64 level, but few such pieces can compare with the originality of this lustrous khaki-gold near-Gem. Freckles of russet patina near the borders are left undisturbed, and both sides are clean aside from a faint scuff near the forehead and an unobtrusive hair-thin mark beneath the IT in UNITED.
From The Kiawah Collection. (#9053)

2241 1907-S MS63 NGC. Boldly struck with impressive, shimmering mint frost and lovely peach-gold and rose toning. There are a few scattered blemishes on each side, including a noticeable milling mark just above T in TWENTY. The final year for the Liberty double eagle type and a slightly scarcer date.
From The Kiawah Collection. (#9054)

PROOF LIBERTY DOUBLE EAGLE

Remarkably Appealing 1891 Double Eagle PR63 ★ Ultra Cameo

2242 1891 PR63 ★ Ultra Cameo NGC. CAC. The 1891 double eagle is rare in either proof format (52 pieces minted) or circulation strike (1,390 coins produced). The number of proof survivors is surprisingly high despite the small mintage. Michael Fuljenz and Douglas Winter (2000) say approximately 20 examples survive, and Jeff Garrett and Ron Guth (2006) estimate 20 to 25 extant specimens. Perusal of NGC/PCGS figures indicates the two services have certified 45 1891 proof twenties in non-Cameo, Cameo, and Ultra/Deep Cameo; a fair number of these are resubmitted coins or crossovers, however.

The current Select offering displays gold-on-black contrast when viewed at certain angles. Brass-gold and apricot colors compete for territory over both sides, each of which exhibits exquisitely struck design features. The numeric grade would undoubtedly be higher were it not for faint hairlines in the fields that show under magnification. The overall eye appeal is remarkable as appropriately recognized by the coveted Star designation and the CAC green label. Census: 1 in 63 ★ Ultra Cameo, 3 finer ★ Ultra Cameo (6/09). (#99107)

HIGH RELIEF DOUBLE EAGLES

Iconic 1907 High Relief, Wire Rim Twenty, XF Details

- 2243** 1907 High Relief, Wire Rim—Damaged, Rim Filed—NCS. XF Details. The concave yellow-gold fields of this rubbed example have a slightly glossy appearance, as well as numerous pinpoint abrasions that give the fields a faintly granular look. Evidence of rim filing is also present. Despite these flaws, this is a readily collectible representative of the famous High Relief double eagle issue. (#9135)

Unworn MCMVII High Relief Twenty

- 2244** 1907 High Relief, Wire Rim—Obverse Rim Filed—NCS. Unc Details. This is a remarkable opportunity to acquire an Uncirculated High Relief at a reasonable price. The coin is strictly Mint State, perhaps MS64—except the obverse rim has been filed, probably to remove the raised fin, as the Mint used to call the wire or knife rim. While some collectors will never consider such a coin, others will look at this offering with delight. (#9135)

Pleasing 1907 High Relief Twenty, MS64 ‘The Most Beautiful Coin Ever Issued’

- 2245** 1907 High Relief, Wire Rim MS64 NGC. David Akers, writing in 1982, said: “The 1907 High Relief Double Eagle is, in my opinion, the most beautiful coin ever issued for normal circulation. Unfortunately, it was not as practical as it was beautiful; the high relief of the standing figure of Liberty and the eagle made the coin impossible to stack properly and thus unpopular and unsuitable for commercial purposes. Minting was also impractical since it reportedly required five blows of the minting press to fully bring up the design making high speed, mass production impossible.”
- This near-Gem is well struck with pleasing, satiny luster. There are a few shallow marks, mostly on the lower reverse, that account for the grade of the coin. An attractive example overall with good eye appeal. (#9135)

1907 High Relief, Flat Rim Double Eagle, MS64

- 2246 1907 High Relief, Flat Rim MS64 NGC. CAC.** There were exciting times at the U.S. Mint in 1907, as the nation's gold coinage was being fundamentally redesigned, after many years of the various Liberty Head types. The largest and most valuable gold type was the twenty dollar "double eagle," and its retooling proved to be perhaps the most difficult challenge of all, compared to the new quarter eagle, half eagle, and ten dollar eagle designs. The drama that ensued included the unfortunate illness and ultimate demise of the great sculptor Augustus Saint-Gaudens, who expired in August of that year.

This is a gorgeous example of the so-called High Relief, Flat Rim variant of Saint-Gaudens' twenty dollar design. According to Walter Breen (1988), there were probably 3,000 examples of this variety produced, compared to around 8,250 pieces corresponding to the other "Wire Rim" version.

Well struck, as usual, and impressively preserved, this piece displays smooth, shimmering surfaces that only betray two or three minor nicks on either side, under close inspection. The fortunate new owner of this historically important specimen will also appreciate its fine, lustrous appearance, which highlights the coin's rich lime-gold coloration. (#9136)

SAINT-GAUDENS DOUBLE EAGLES

- 2247 1907 Arabic Numerals MS62 NGC.** A yellow-gold double eagle whose surfaces possess fewer small marks than is customary for the MS62 grade. The Capitol building and torch fingers have impressive definition, although Liberty's nose blends into her mouth.
From The Bay State Collection, Part One. (#9141)
- 2248 1907 Arabic Numerals MS63 PCGS.** Bright luster endows this Select Saint, and a well executed strike leaves strong detail on the design features. Attractive yellow-gold coloration imbued with traces of light mint-green envelops both sides. Scattered minute marks prevent a higher grade. (#9141)
- 2249 1907 Arabic Numerals MS64 PCGS.** A few tiny areas of green patina on the obverse grace the otherwise yellow-gold surfaces. Pleasing luster and a strong strike give this piece great eye appeal. A lovely representative of the first year of the series. (#9141)
- 2250 1907 Arabic Numerals MS64 PCGS.** The first year of issue, popular with type collectors, this No Motto Saint-Gaudens double eagle is highly lustrous with brilliant yellow-gold surfaces and splashes of dark patina on the high points. (#9141)
- 2251 1907 Arabic Numerals MS64 PCGS.** A boldly struck and beautiful Choice first-year Saint-Gaudens twenty. Much scarcer than the No Motto 1908, the only other Philadelphia issue of the design subtype.
From The Bay State Collection, Part One. (#9141)

Gem 1907 Arabic Numerals Twenty

- 2252 1907 Arabic Numerals MS65 PCGS.** After Augustus Saint-Gaudens passed away, Charles Barber set about modifying the design for the double eagle to a shallow relief because of the difficulties in striking the High Relief pieces. This example represents the modified Barber design—hardly an improvement. The luster is intense with full brilliance, and the surfaces are remarkably clean and pleasing.
From The Kiawah Collection. (#9141)

Lovely 1907 Arabic Numerals Gem Twenty

- 2253 1907 Arabic Numerals MS65 PCGS.** The 1907 Arabic Numbers twenty represents a greatly reduced relief from that of the Roman Numerals High Relief of the same year. Splashes of mint-green endow the yellow-gold surfaces of this lovely Gem, and a well executed strike emboldens the design features. Lustrous surfaces reveal a few minor, grade-consistent marks. (#9141)

Gem 1907 Arabic Numerals Twenty Dollar

- 2254 1907 Arabic Numerals MS65 PCGS.** U.S. Mint personnel worked hard to produce the new Saint-Gaudens double eagle coins in 1907, finally issuing the so-called Arabic numerals version after the difficulties with the Ultra High Relief and High Relief varieties. This Gem example is a fine representative of the new type. Boldly struck with shimmering luster and lovely champagne-rose color. Interestingly, this piece shows a partial wire rim on both sides. (#9141)

- 2255 1908 No Motto MS65 PCGS.** Both sides of this orange-gold Gem are awash in dazzling luster and exhibit sharply struck design elements. The few grade-consistent marks do not detract in the least. Housed in a green label holder. An ideal high-grade type coin. *From The Kiawah Collection.* (#9142)

- 2256 1908 No Motto MS65 NGC.** An impressively lustrous yellow-gold Gem example of this popular type issue. The strike is solid, and though a few small marks are scattered in the rays below the eagle, the eye appeal holds up well. (#9142)

- 2257 1908 No Motto MS65 NGC.** Long Rays obverse. A honey-gold Gem of this popular and short-lived design subtype. Boldly struck and lustrous with a well preserved reverse and only a few trivial ticks on the obverse field. (#9142)

- 2258 1908 No Motto, Wells Fargo Nevada MS66 PCGS.** Short Rays obverse, as usual for the remarkable Wells Fargo hoard. A well struck Premium Gem with comprehensive billowy luster and only a couple of isolated minor ticks. Certified in a green label holder. *From The Kiawah Collection.* (#99142)

- 2259 1908-D No Motto MS64 PCGS.** Rich golden color with crimson and yellow highlights brilliant, slightly matte luster. Some wispy abrasions are noted, but are not particularly distracting for the grade. *From The Kiawah Collection.* (#9143)

- 2260 1908-D Motto MS64 PCGS.** Strong luster radiates from both sides of this sharply struck near-Gem. Peach-gold surfaces are lightly marked. (#9148)

- 2261 1908-D Motto MS64 NGC.** The first year of the With Motto design, and also the first year that the Denver Mint struck the beautiful Saint-Gaudens double eagles. This near-Gem is fully lustrous with brilliant yellow-gold surfaces and splashes of darker high point patina. (#9148)

- 2262 1908-D Motto MS64 PCGS.** Well-defined with strong and shining yellow-gold luster. Occasional hints of orange and lilac toning are present near the rims. An appealing near-Mint Denver example. *From The Kiawah Collection.* (#9148)

Low Mintage 1908-S Double Eagle, AU50

- 2263 1908-S AU50 NGC.** Among regular issues of the Saint-Gaudens double eagle (and excluding the 1907 High Relief and Ultra High Relief experiments) the 1908-S has the lowest mintage, at a mere 22,000 pieces. This is an attractive AU specimen, with reddish-gold and lime coloration. The usual grade-consistent small marks and circulation wear are noted on each side. *From The Kiawah Collection.* (#9149)

- 2264 1909 MS62 PCGS.** Bright surfaces display pleasing yellow-gold color and nice luster. This is a sharply struck piece that reveals distributed minute marks. (#9150)

Nicely Struck 1909 Twenty Dollar, MS63

- 2265 1909 MS63 PCGS.** The peach-gold surfaces of this Select offering are imbued with traces of mint-green, and the design features are well brought up, particularly the Capitol building panes, the fingers on the branch hand, and the eagle's plumage. Minor marks, especially on the reverse, limit the grade. Difficult to locate above MS63. *From The Kiawah Collection.* (#9150)

Splendid 1909 Double Eagle, Choice Mint State

- 2266 1909 MS64 PCGS.** The 1909 double eagle had a mintage of 161,282 pieces, which appears to have been equally divided between the regular date and 1909/8 overdate issues. Splendid luster radiates from the attractive yellow-gold surfaces of the present coin. The strike is bold, and there are no noteworthy marks on either side. PCGS has certified only 27 examples finer (6/09). *From The Bay State Collection, Part One.* (#9150)

Popular 1909/8 MS62 Double Eagle

- 2267 1909/8 MS62 PCGS.** This is a pleasing Mint State example that is scarce in top quality. While a quantity of finer grade coins have been certified, this piece retains excellent eye appeal. Light yellow obverse toning is accented with hints of pink, while the reverse has deeper yellow-gold color. This popular overdate is the only such error known for the Saint-Gaudens double eagle series.
From The Kiawah Collection. (#9151)

Lovely 1909-D Saint-Gaudens Twenty, MS61

- 2268 1909-D MS61 NGC.** Well struck and lustrous, with a rich satiny sheen across both sides, this example displays lovely orange-gold coloration and nicely preserved surfaces. Scattered, tiny contact marks reduce the grade. This issue has the lowest mintage for a Denver Mint Saint-Gaudens double eagle, at just 52,500 pieces, but Uncirculated survivors are available at reasonable price levels.
From The Kiawah Collection. (#9152)

Elusive Near-Gem 1909-D Double Eagle

- 2269 1909-D MS64 PCGS.** Both sides of this lovely near-Gem example present shimmering luster over delicate shades of straw-gold and pale green. The design elements are well struck, and even the fingers on Liberty's torch hand exhibit good delineation. A handful of small obverse marks limit the grade. According to Jeff Garrett and Ron Guth: "This is the scarcest Denver issue and a very low-mintage date for the series." (#9152)
- 2270 1909-S MS64 PCGS.** An exceptionally vibrant example of this issue, which was considered much scarcer before the emergence of a Mint State hoard from El Salvador in the 1980s. The clean, frosty surfaces only exhibit a few random bagmarks. (#9153)
- 2271 1909-S MS64 PCGS.** An intense frosty sheen gives this piece a decidedly effulgent appearance. Light honey-gold and rose toning is intermingled across each side. A lightly marked, alluring near-Gem example of this early San Francisco Mint issue. (#9153)

- 2272 1909-S MS64 PCGS.** The common issue of the date, this Choice Mint State representative has lustrous yellow surfaces with lovely light pink highlights. (#9153)
- 2273 1909-S MS64 NGC.** Pleasingly lustrous yellow-gold surfaces show hints of straw and honey. An appealing near-Gem, well struck and without any singularly distracting marks.
From The Kiawah Collection. (#9153)

Dynamic Gem 1909-S Double Eagle

- 2274 1909-S MS65 NGC.** Vivacious luster and an excellent strike combine with unmarked surfaces. A pleasing representative that should delight the advanced Saint-Gaudens collector. Typical Mint State examples of the 1909-S are found with little difficulty, but Gems are undeniably scarce. (#9153)
- 2275 1910 MS64 PCGS.** The surfaces of this highly lustrous specimen are remarkably clean, and the piece consequently has an appearance that makes it seem like a strong candidate for Gem status. A handful of trivial marks in the left obverse field, which are barely visible, must have prevented the MS65 assessment. A high-end near-Gem with well struck devices and lovely honey-gold toning. (#9154)
- 2276 1910 MS64 PCGS. CAC.** Impressively lustrous with light yellow-gold color that picks up hints of orange. A strongly detailed near-Gem that is minimally marked and beautiful. (#9154)
- 2277 1910-D MS65 PCGS.** This is a splendid Gem example whose surfaces are awash in satiny mint frost, with almost every design feature well struck on both sides, save only for minor softness on the fingers of Liberty's torch hand. A remarkably clean coin, the honey-gold surfaces are free of the numerous bagmarks that often plague survivors of this D-mint delivery. (#9155)
- 2278 1910-D MS65 PCGS.** This is a sharply struck Gem, evidenced by crisp detail on the Capitol building, Liberty's fingers, and the eagle's plumage. Greenish-gold surfaces yield pleasing luster and just a few minor marks consistent with the designated grade.
From The Kiawah Collection. (#9155)
- 2279 1910-S MS64 PCGS. CAC.** Lustrous yellow-gold surfaces are tinted with mint-green and exhibit sharply struck design elements, evidenced by strong detail on Liberty's fingers and gown lines and the eagle's plumage. Small marks preclude Gem classification. (#9156)
- 2280 1911 MS62 PCGS.** Apple-green and almond-gold shades intermingle throughout this lustrous and sharply impressed example. Marks are relatively scarce and invariably minor, save for a thin line above the left (facing) knee. (#9157)
- 2281 1911 MS62 PCGS.** Lemon and lime hues alternate across this satiny and well defined double eagle. One inconspicuous vertical mark near the branch stem, but otherwise abrasions are surprisingly few for the assigned grade.
From The Bay State Collection, Part One. (#9157)
- 2282 1911 MS63 PCGS.** The 1911 has a relatively low mintage of less than 200,000 pieces, and Gems are out of the reach of most collectors of the series. Fortunately, MS63 pieces are reasonably priced and provide excellent value. This satiny butter-gold representative is precisely struck and lacks obtrusive marks. (#9157)

- 2283 1911 MS63 PCGS.** A strongly lustrous Select coin with rich sun-yellow color and touches of orange. Well-defined and appealing with few significant marks.
From The Sonoma Collection. (#9157)

Sharp 1911 Double Eagle, MS64

- 2284 1911 MS64 PCGS.** The yellow-gold surfaces of this near-Gem display hints of greenish-tan and possess nice luster. Sharp definition shows on the design motifs, a usual characteristic of this issue. Minute marks deny Gem classification. This date is scarce in MS65 and rare any finer.
From The Kiawah Collection. (#9157)

- 2285 1911-D MS65 PCGS.** An impressively lustrous Denver double eagle Gem with warm yellow-gold color. Well-defined and carefully preserved with striking visual appeal.
From The Kiawah Collection. (#9158)

- 2286 1911-D/D MS65 PCGS.** FS-501, although the repunched mintmark is unmentioned on the insert. Shining sun-yellow surfaces show glimpses of wheat and flax coloration. This strongly impressed Gem offers remarkable visual appeal and high preservation.
From The Sonoma Collection. (#145010)

- 2287 1911-D/D MS65 PCGS.** FS-501. Green-gold and apricot shades embrace this unabraded and sharply struck Gem. Impressively bereft of grade-limiting abrasions. An original example of this prominent repunched mintmark variety. (#145010)

**1911-D/D Double Eagle, MS66
Conditionally Elusive**

- 2288 1911-D/D MS66 PCGS.** Repunched Mintmark. FS-501, formerly FS-1911.5. This carefully preserved Premium Gem exhibits lovely yellow-gold toning and boasts a powerful strike. Although not rare in the absolute sense, the 1911-D/D is conditionally scarce in high Mint State grades. PCGS has certified only eight repunched mintmark examples in MS66, with none finer (6/09). (#145010)

Outstanding MS66 1911-D/D Twenty

- 2289 1911-D/D MS66 NGC.** FS-501. The mintmark exhibits prominent repunching. The reverse appears pristine to the unaided eye, and the obverse reveals only a few wispy abrasions. The strike is razor-sharp, with just a hint of softness on Liberty's knee. This remarkable specimen would suit even the most discerning eye. (#145010)

- 2290 1911-S MS64 PCGS.** The obverse of this Choice Mint State specimen is exceptionally well-preserved, and the reverse shows only inconsequential abrasions. Razor-sharp with pleasing satiny luster. (#9159)

- 2291 1912 MS63 PCGS.** The 1912 double eagle saw an additional two stars to commemorate the admission of New Mexico and Arizona to the Union, for a total of 48. The lustrous surfaces of this Select example display apricot-gold and mint-green color and are well struck. Limited in grade by a few inoffensive marks.
From The Kiawah Collection. (#9160)

- 2292 1913 MS62 PCGS.** Sweeping luster encompasses lightly abraded olive-gold surfaces. The strike is good, and the coin will please most collectors. A lower mintage date, rarely seen above the MS64 level. (#9161)

- 2293 1913 MS63 NGC.** Strong sun-yellow luster dominates the eye appeal of this Select example. Well struck and attractive with a dot of alloy at Liberty's midsection.
From The Kiawah Collection. (#9161)

- 2294 1913 MS63 PCGS.** This lower mintage Saint-Gaudens double eagle has undiminished luster and surprisingly few marks. The peach-tinted color is original, and the strike is good despite minor flatness on the raised knee. An opportunity to secure an eye appealing example of this scarce issue.
From The Sonoma Collection. (#9161)

Wonderful Near-Gem 1913 Double Eagle

- 2295 1913 MS64 PCGS.** Lovely yellow-gold patina drapes both sides of this sharply struck representative. Light abrasions are consistent with the grade but do not hinder the captivating mint bloom. The 1913 double eagle is challenging in grades higher than Choice Mint State, and PCGS has certified only nine examples finer (6/09).
From The Bay State Collection, Part One. (#9161)

- 2296 1913-D MS64 NGC.** Strongly struck with pale yellow-gold surfaces that show glimpses of wheat and honey. Excellent eye appeal with only a few light ticks visible on the lower part of Liberty.
From The Kiawah Collection. (#9162)

- 2297 1913-D MS64 PCGS.** A beautiful Saint-Gaudens twenty that boasts dynamic luster and a virtually full strike. Splendidly free from marks, and an outstanding value relative to the next higher grade. *From The Bay State Collection, Part One.* (#9162)

Gorgeous 1913-D Twenty Dollar, MS65

- 2298 1913-D MS65 PCGS.** This is a gorgeous Gem example with simply outstanding luster and deep, dramatic coloration in variegated shades of rose-gold, sea-green, and steel-blue. Surface marks are minimal, as expected for the grade, and the design elements are boldly struck throughout. Interestingly, the eagle's mouth is extended, by some mint-made process that was probably unintended. (#9162)

- 2299 1913-S MS62 NGC.** Ranking among the lowest-mintage issues in the Saint-Gaudens series, the 1913-S is a popular date, yet still plentiful in Mint State grades. This frosty piece has pleasing honey-gold surfaces with darker high point toning on both sides, attesting to its originality. (#9163)

- 2300 1913-S MS62 NGC.** Light yellow-gold color overall with a touch of alloy within the C of AMERICA on the reverse. Lustrous and pleasing with few overt abrasions. *From The Kiawah Collection.* (#9163)

Pleasing 1913-S Saint, MS63

- 2301 1913-S MS63 NGC.** Frosty and lustrous yellow-gold surfaces exhibit dark patina on the design high points. A few scattered marks on each side are consistent with the grade. Large exports early in the 20th century, with recent imports of the same for modern-day collectors, ensure that the supply of Mint State pieces is adequate for specialists to acquire a pleasing piece such as the present specimen. (#9163)

Select Uncirculated 1913-S Twenty Dollar

- 2302 1913-S MS63 PCGS.** A satiny yellow-gold example with a bright, lustrous appearance. Well struck at the San Francisco Mint, and from a small group of just 34,000 pieces that were originally produced. Not a rare issue in Mint State, however, despite the low mintage, and a date that would serve well for type purposes. (#9163)

Widely Sought 1913-S Twenty MS63

- 2303 1913-S MS63 PCGS.** The 1913-S mintage of 34,000 pieces stands out in the Guide Book, particularly since the 1914-S mintage was 1.498 million coins. This lustrous example has an even strike and dynamic luster. Minor marks are here and there, and the raised knee is incompletely defined. A worthy representative of a much-pursued issue. *From The Sonoma Collection.* (#9163)

Low-Mintage 1913-S Double Eagle, MS63

- 2304 1913-S MS63 PCGS.** Except for the High Reliefs, the 1913-S double eagle has the second-lowest mintage in the Saint-Gaudens series with only 34,000 pieces struck. Peppered marks limit the grade, but none merit specific mention. The strike is a bit soft, as typical for this issue, but the frosty luster is quite pleasing. *From The Bay State Collection, Part One.* (#9163)

- 2305 1914 MS62 NGC.** Bright and lustrous, with a pleasing satiny sheen across yellow-gold surfaces. Boldly struck save for minor softness on Liberty's torch hand and the Capitol building. A noticeable mark is seen at 2 o'clock on the reverse, perhaps preventing a slightly higher grade. (#9164)

Splendid 1914 Double Eagle, MS63

- 2306 1914 MS63 PCGS.** This carefully preserved piece exhibits a sharp strike coupled with delightful satiny luster. Pleasing yellow-gold patina covers both sides, which exhibit impressive eye appeal. The 1914 double eagle is popular among collectors because it has the lowest mintage of any Philadelphia Mint issue in the series. (#9164)

Charming Select 1914 Double Eagle

- 2307 1914 MS63 PCGS.** In *Guide Book of Double Eagles*, Bowers (2004) writes that the 1914 "is somewhat on the scarce side." The present example exhibits lovely pale yellow patina. Impressive luster shimmers throughout the lightly abraded fields. This appealing coin would make an excellent representative. (#9164)

Low Mintage 1914 Twenty, MS63

- 2308 1914 MS63 PCGS.** A collector favorite from the Saint-Gaudens series, due to the low reported mintage of 95,250 pieces. The surfaces are attractive for the modest grade, with minimal abrasions from bag handling. An average strike displays the uppermost devices. *From The Kiawah Collection.* (#9164)

Select 1914 Saint-Gaudens Twenty

- 2309 1914 MS63 PCGS.** An original apricot-gold Select example of this low mintage collector favorite. Just 95,250 pieces were coined, the smallest Arabic Numerals Philadelphia production. Most examples encountered are bagmarked, although the present 1914 has few abrasions aside from wispy luster grazes and scattered minute ticks. *From The Sonoma Collection.* (#9164)

Appealing 1914 Double Eagle, MS64

- 2310 1914 MS64 PCGS.** With a mintage in the five digits, the 1914 ranks as one of the scarcer dates in the series. This piece has incredible eye appeal, with delightful yellow-gold patina complementing magnificent luster. The strike is sharp, and there are no marks of any significance. PCGS has certified only 39 pieces finer (6/09). *From The Bay State Collection, Part One.* (#9164)

Lovely 1914-D Double Eagle, MS65

- 2311 1914-D MS65 PCGS.** Although not a particularly difficult date, most 1914-D double eagles were melted in the 1930s. Bright yellow patina endows the lightly abraded surfaces of this powerfully struck specimen. Scintillating satiny luster enhances the great eye appeal. NGC and PCGS combined have certified fewer than 90 examples finer (6/09). (#9165)

Charming Gem 1914-D Double Eagle

- 2312 1914-D MS65 PCGS.** Lustrous surfaces display sharply struck devices, including strong definition on Liberty's face, fingers, and toes, and on the eagle's feathers. Peach-gold patina imbued with traces of lime-green bathes both sides. The only mark of note occurs on Liberty's right leg above the knee.
From The Kiawah Collection. (#9165)

Enticing Gem 1914-D Twenty

- 2313 1914-D MS65 NGC.** The frosty luster that covers this Gem representative is exceptional and combines with the crisply struck motifs to give this piece excellent eye appeal. Both sides have only a few grade-defining grazes. NGC has certified only 33 pieces finer (6/09).
From The Bay State Collection, Part One. (#9165)

- 2314 1915 MS63 PCGS.** Lustrous sun-yellow surfaces display glimpses of green-gold. A modestly abraded and eminently appealing Select example of this lower-mintage Philadelphia issue.
From The Kiawah Collection. (#9167)

- 2315 1915 MS63 NGC.** This lustrous and crisply struck piece is carefully preserved aside from a minor graze near the L in LIBERTY. A conditionally scarce issue, the final Philadelphia Mint double eagle struck until after the end of World War I.
From The Sonoma Collection. (#9167)

- 2316 1915-S MS65 PCGS.** Impressively lustrous with rich sun-yellow color. This S-mint twenty is sharply struck with remarkable eye appeal, even by Gem standards.
From The Kiawah Collection. (#9168)

Lovely 1915-S Double Eagle, Premium Gem

- 2317 1915-S MS66 PCGS.** This sharply struck Premium Gem has charming satiny luster that radiates from the bright yellow surfaces. A few nearly imperceptible grazes preclude an even higher grade. In fact, NGC and PCGS together have graded only one finer example (6/09). A wonderful high-grade example of this more-available issue. (#9168)

- 2318 1916-S MS65 PCGS.** The 1915-S and 1916-S share similarities in appearance and strike, mintage (567,500 for the 1915-S versus 796,000 for the 1916-S), and price structure, but a glance at the population reports will confirm that the 1916-S is less common in all grades than its immediate predecessor. This is a lustrous, crisply struck, and unblemished Gem that has pleasing honey-gold and steel-blue toning.
From The Kiawah Collection. (#9169)

- 2319 1920 MS63 NGC.** Frosty and boldly struck throughout, with weakness noticed only on the fingers of Liberty's torch hand. Spidery die cracks encircle the obverse periphery. Mildly abraded, consistent with the Select Uncirculated grade. (#9170)

Desirable Choice 1920 Twenty Dollar

- 2320 1920 MS64 NGC. CAC.** This well preserved, crisply struck, and thoroughly lustrous high-end butter-gold example provides outstanding value, given the near impossibility of securing a certified Gem. The 1920 mintage was less than half that of either the 1920-S or 1921, but both of those issues became great rarities after the 1933 gold recall, while the 1920 is comparatively plentiful. Most examples grade MS61 through MS63, however, and the 1920 becomes surprisingly rare above the MS64 level. NGC and PCGS combined have only certified eight pieces as MS65 with none finer (6/09). (#9170)

Lustrous 1920 Near-Gem Twenty Dollar

- 2321 1920 MS64 PCGS.** The 1920 double eagle is available in most grades through near-Gem, but is nearly impossible to find any finer. In this regard, PCGS has graded a solitary example higher, and NGC seven coins finer (6/09). This MS64 specimen possesses sharply struck design elements and pleasing luster emanating from peach-gold surfaces. Scattered marks limit the grade. (#9170)

Marvelous 1920 Double Eagle, MS64

- 2322 1920 MS64 PCGS. CAC.** The 1920 double eagle may be available in most grades, but, as Garrett and Guth (2006) report, "in MS-65 grades this date is virtually impossible to find," which makes near-Gem examples that much more desirable. A reddish hue accents the yellow-orange patina of the present coin. Radiant luster enhances the delightful eye appeal. (#9170)

Attractive MS64 1920 Double Eagle

- 2323 1920 MS64 NGC.** This issue is easily available at the near-Gem level but, surprisingly, immediately becomes extremely rare just one grade higher at MS65. NGC has only certified 7 Gems to date, with none finer (5/09). This example is highly lustrous, with lovely olive-gold toning and boldly struck design motifs. Surface marks are only typical for the grade.
From The Kiawah Collection. (#9170)

Appealing 1922 Gem Twenty Dollar

- 2324 1922 MS65 PCGS.** The 1922 is plentiful through MS64, and even Gems are not that difficult to locate. PCGS and NGC, however, have seen a combined total of 15 higher-grade pieces, all Premium Gems (5/09). A satiny sheen is noted on both sides, each of which shows pretty peach-gold and yellow-green toning. A solid strike imparts sharp detail to the devices, and a handful of minor marks may well prevent an even finer grade. Nice overall eye appeal.
From The Kiawah Collection. (#9173)

Delightful MS65 1922 Double Eagle

- 2325 1922 MS65 PCGS.** Brassy-gold patina graces the minimally abraded surfaces of this attractive coin. There is just a touch of weakness on the eagle's breast, but the strike is otherwise solid. The 1922 is seldom seen in higher grades, with only 15 such examples certified by NGC and PCGS combined (6/09).
From The Bay State Collection, Part One. (#9173)

- 2326 1922-S MS61 PCGS.** Like all San Francisco issues from its decade, the 1922-S should be common based on its mintage. History intervened, however, and most '22-S twenties met their doom in Treasury smelters during the Roosevelt administration. The present piece survived, and provides unbroken cartwheel canary-gold luster. The obverse field has the expected number of faint abrasions. (#9174)

Alluring 1922-S Double Eagle, MS62

- 2327 1922-S MS62 NGC.** The design elements are generally well defined, and lavish luster gives this piece a flashy, radiant appearance. A few moderate marks on the obverse and scattered trivial marks on the reverse limit the grade of this otherwise alluring representative. According to Garrett and Guth: "This is a date that suffered tremendously from the massive meltings of gold coins in the 1930s."
From The Kiawah Collection. (#9174)

Elusive Select 1922-S Twenty Dollar

- 2328 1922-S MS63 NGC.** Under normal circumstances, the 1922-S would be a common date. The mintage was 2,658,000 pieces. But there was no need for large denomination gold coins in West Coast circulation, and examples needed for foreign trade were satisfied by Philadelphia issues. The 1922-S was apparently held by the Treasury to back gold certificates, then principally melted following Roosevelt's 1933 recall. Fortunately, a thousand-plus examples survived, including the present lustrous and moderately abraded peach-gold representative.

From The Sonoma Collection. (#9174)

Radiant 1922-S Double Eagle, MS64

- 2329 1922-S MS64 NGC.** Massive meltings in the 1930s depleted the number of 1922-S double eagles. Most surviving examples are in circulated or lower Mint State grades. Radiant luster exudes from the yellow-gold surfaces of this near-Gem, and a well directed strike leaves sharp imprints on the design elements. Scattered surface and rim marks deny a higher grade. NGC has certified only 14 coins higher and PCGS 12 finer (6/09). (#9174)

- 2330 1923 MS64 PCGS.** Strong luster emanates from the greenish-gold surfaces of this near-Gem. Sharply struck and minimally abraded. (#9175)

Wonderful 1923 Double Eagle, MS65

- 2331 1923 MS65 PCGS. CAC.** A delightful Gem, this lovely Saint-Gaudens double eagle has satiny luster and bold design details. A few trivial abrasions are scattered over each side, preventing a higher grade. While relatively abundant in MS65, few finer examples have ever been certified. Combined, NGC and PCGS have only graded four finer coins (5/09). (#9175)

Splendid 1923 Double Eagle, Gem Mint State

- 2332 1923 MS65 PCGS.** Impressive satiny luster complements the attractive sun-gold patina that covers both sides. There is a small planchet flaw at the top of the obverse, and a thin grease mark (as made) across the lower part of Liberty's body. This boldly struck piece has great eye appeal. (#9175)

Challenging 1923 Twenty Dollar, MS65

- 2333 1923 MS65 PCGS.** The 1923 double eagle suffered from the mass meltings of the 1930s, but a large number survived in overseas hoards. Pieces through near-Gem are thus easily obtainable. MS65 coins are more challenging, and anything finer is extremely rare. This lustrous Gem displays a blend of peach-gold, red, and light green. A well directed strike emboldens the design elements, and a handful of minute marks limits the grade.

From The Kiawah Collection. (#9175)

Gorgeous Gem 1923 Double Eagle

- 2334 1923 MS65 NGC.** Bright yellow-gold luster overall with glimpses of peach color in the upper obverse field. This piece is well struck in general, if a trifle soft at Liberty's torch hand and her toes. While the 1923 double eagle is relatively available in grades through near-Gem, it becomes elusive in MS65 and is nearly impossible to find any finer; NGC and PCGS have graded only four such coins between them (5/09). (#9175)

Frosty MS65 1923 Double Eagle

- 2335 1923 MS65 NGC.** Charming frosty luster highlights the rich yellow patina that drapes both sides. Scattered, grade-defining abrasions are minor. The 1923 double eagle was melted *en masse* in the 1930s and consequently the number of survivors is quite low. Examples are exceptionally rare in grades finer than Gem, as only four such examples have been certified by NGC and PCGS combined (6/09).

From The Bay State Collection, Part One. (#9175)

- 2336 1923-D MS65 PCGS.** Intense luster and rich honey-gold coloration elevate the eye appeal of this lovely Saint-Gaudens twenty. There are a handful of tiny abrasions on the obverse and a few scattered alloy spots on each side, but they are insufficient to preclude the Gem grade assessment by PCGS. (#9176)

- 2337 1923-D MS65 PCGS.** The obverse has strong orange-gold overtones, while the reverse exhibits slightly paler wheat shadings. Both sides are beautifully lustrous with the careful preservation that defines a Gem. (#9176)

- 2338 1923-D MS65 NGC.** This Saint-Gaudens twenty offers sweeping luster, a sharp strike, and a refreshingly unabraded appearance. The only readily obtained branch mint issue from the 1920s, a decade in which anyone could secure for face value many dates that would become prime rarities just two decades later.

From The Bay State Collection, Part One. (#9176)

Exciting 1923-D Double Eagle, MS66 ★

- 2339 1923-D MS66 ★ NGC.** Impressive luster shimmers throughout the lovely yellow-gold surfaces. The few minor abrasions on each side do not affect the outstanding eye appeal, which has garnered this piece a coveted Star designation from NGC. This sharply struck Premium Gem would make an excellent type coin. (#9176)

Lovely 1923-D Double Eagle, MS66

- 2340 1923-D MS66 PCGS.** The carefully preserved surfaces of this Premium Gem show pleasing luster, and the design elements are solidly struck. Yellow-gold patination displays subtle splashes of mint-green and rose. A lovely representative of the last generally available D-mint double eagle, and a superlative type coin.

From The Kiawah Collection. (#9176)

- 2341 1924 MS65 NGC.** Pleasingly lustrous yellow-gold surfaces show a few pinpoint marks, but each side is otherwise undisturbed. A well struck and attractive piece that with a hint of silver-green color at the right obverse. (#9177)

- 2342 1924 MS65 NGC.** Strong yellow-orange luster defines the eye appeal of this Gem, which hails from one of the most popular Saint-Gaudens double eagle type issues. It is well-defined with faint patina over each side. (#9177)

- 2343 1924 MS65 NGC.** Lustrous butter-yellow color overall with hints of frostiness on the high points. This Gem is well suited for the type collector, though a small scrape is noted below Liberty's rock. (#9177)

- 2344 1924 MS66 PCGS.** Rich sun-yellow color dominates each side, though glimpses of mint-green are present in the obverse fields. Immensely lustrous and fantastically appealing, even by the high standards of this type issue. PCGS has graded 80 finer examples (5/09). (#9177)

- 2345 1924 MS66 PCGS.** A gorgeous Premium Gem representative of this popular type issue, boldly impressed with a light "skin" that has formed over pale and slightly frosty yellow-gold surfaces. Carefully preserved with top-flight eye appeal.

From The Kiawah Collection. (#9177)

Fantastic Superb Gem 1924 Double Eagle

- 2346 1924 MS67 PCGS. CAC.** The popularity that the 1924 double eagle enjoys as a type coin extends to virtually any level, even the Superb Gem state, as the present piece shows. The strike is suitably bold for the grade, if a trifle soft on Liberty's torch hand, and the fields are smooth and immensely lustrous. Occasional hints of pink visit sun-yellow and peach-orange surfaces. Despite the over 4.3 million pieces struck and repatriation that amounts to at least a six-figure return to the United States, the 1924 double eagle remains conditionally scarce in MS67 and an extreme rarity any finer, with just one such coin known to PCGS (5/09). (#9177)

Challenging 1924-D Twenty, MS61

- 2347 1924-D MS61 NGC.** Despite a mintage over 3 million coins, the 1924-D is an important date in the Saint-Gaudens series. While most survivors are Mint State, they only infrequently appear in the marketplace. The present example is frosty, with brilliant yellow surfaces and a few scattered marks of little concern. A small ebony spot is hidden in the rays below the eagle. (#9178)

Satiny 1924-D Double Eagle, MS62

- 2348 1924-D MS62 PCGS.** Well struck with smooth satin luster and light peach-gold and pale rose toning. The reverse shows better preservation than the obverse, where a somewhat harsh abrasion resides in the right field, below Liberty's elbow. This Denver Mint issue is an uncommon date, unlike its Philadelphia Mint counterpart, and Mint State survivors only number in the hundreds rather than the thousands.
From The Kiawah Collection. (#9178)

- 2349 1924-S—Improperly Cleaned—NCS. AU Details.** Careful rotation beneath a strong light reveals patches of faint hairlines, but the reverse is lustrous and the obverse still has subdued cartwheel sheen. Actual circulation wear is minimal. Most of the nearly 3 million pieces coined were eventually melted. (#9179)

Alluring 1924-S Double Eagle, MS62

- 2350 1924-S MS62 NGC.** Once rumored to be a great rarity; Garrett and Guth relate that as late as the 1950s fewer than a half-dozen examples of this issue were believed to exist. Apparently there were a number of pieces stored in European banks, enough of which have returned to the United States to make this a reasonably available date for collectors. This example has a pleasing satiny sheen and attractive lime-gold and peach toning. The striking details are typically somewhat weak for an S-mint product, but surface marks are minimal on both sides.
From The Kiawah Collection. (#9179)

- 2351 1925 MS63 PCGS.** Splendid satiny luster shimmers beneath the mostly wheat-yellow patina. The strike is above-average, and there are only minor marks on each side. Housed in a first-generation PCGS holder.
From The Bay State Collection, Part One. (#9180)

- 2352 1925 MS66 NGC.** Strongly struck and shining. The color on this Premium Gem is primarily sun-yellow, though paler canary color and a few dots of deeper alloy are also present near the rims. Impressively preserved with strong visual appeal. NGC has graded only 11 numerically finer pieces (5/09).
From The Kiawah Collection. (#9180)

Scarce 1925-D Double Eagle, MS62

- 2353 1925-D MS62 PCGS.** The 1925-D is a scarce date in the Saint-Gaudens series, as much of the nearly 3 million-coin mintage was melted in the next decade without the coins ever having been released. This piece is fully brilliant with splendid orange-gold luster and frosty surfaces. Only a few trivial surface marks prevent a higher grade.
From The Kiawah Collection. (#9181)

Elusive 1925-S Double Eagle

- 2354 1925-S PCGS Genuine.** The vast majority of the more than 3.7 million 1925-S double eagles struck were melted in the 1930s, which makes this issue far scarcer than its mintage indicates. Light yellow-gold patina covers both sides of this lightly worn specimen, which exhibits a bold strike. Several shallow scratches are noted around Liberty's head. (#9182)

Seldom-Seen Mint State 1925-S Twenty

- 2355 1925-S MS61 NGC.** Light wheat-gold color covers the luminous surfaces of this S-mint representative. It is struck from worn dies which show considerable erosion at the margins, a not uncommon characteristic of the issue (David Akers, 2008, p. 315). Still, the central devices offer generally sharp detail. Minute marks are scattered over both sides. The 1925-S was heavily affected by the mass meltings of American gold coinage in the 1930s, with the mintage of over 3.7 million pieces reduced to just a few hundred survivors. It is extremely difficult to locate in the middle to higher levels of Mint State. (#9182)

- 2356 1926 MS65 PCGS.** A canary-gold Gem with vibrant cartwheel sheen and a pleasing strike. Marks are essentially impossible to locate without a loupe. A few subtle copper spots are as made. Certified in a green label holder.
From The Bay State Collection, Part One. (#9183)

- 2357 1926 MS66 ★ NGC.** FS-101. Although undesignated as such on the NGC insert, this is the Triple Die Obverse variety, with tripling evident near the date on the rays, stars, and designer's monogram. Crisply struck and beautifully preserved. Census: 6 in 66 ★, 1 finer with a Star designation (6/09). (#9183)

Important 1926-D Twenty, MS62

- 2358 1926-D MS62 PCGS.** Like its much rarer D-mint counterpart from the following year, the 1926-D double eagle was heavily melted. As described by Garrett and Guth: "The few that did survive were either found overseas or were held back by a handful of wealthy collectors able to keep them through the turmoil of the ensuing few decades."

The present example is strongly appealing for the grade, with lustrous wheat-gold surfaces showing hints of orange. The devices are well struck. Though abrasions below Liberty's flowing hair, at her midsection, and near the olive branch combine to preclude Select status, this remains an important survivor. PCGS has graded just 73 finer examples (6/09). (#9184)

Pleasing 1926-S Double Eagle, MS63

- 2359 1926-S MS63 PCGS.** The smooth, lightly abraded surfaces of this lustrous example have a lovely yellow-gold color. The strike is a bit soft, as typical for the S-mint issues of this era, but the eye appeal is quite nice. A splendid representative of this issue, which has a low survival rate due to the meltings of the 1930s. (#9185)

Scarce 1926-S Double Eagle, MS63

- 2360 1926-S MS63 PCGS.** The eye appeal of this San Francisco Mint double eagle is excellent for the Select Mint State grade designation. Sumptuous luster ripples across each side, highlighting honey-gold, rose, and greenish coloration. Garrett and Guth comment that this issue suffered a fate similar to that of its Denver Mint counterpart, with a relatively high mintage that was decimated by the mass meltings of the 1930s, making the 1926-S a scarce commodity. *From The Kiawah Collection.* (#9185)

- 2361 1927 MS65 NGC.** A crisply struck high-end Gem with splendidly smooth fields and only inconsequential contact on the devices. Booming luster bathes both sides. Delicately toned in aqua and sun-gold shades. (#9186)
- 2362 1927 MS65 NGC.** This green-gold Gem features dazzling luster and attractive preservation. The strike is even, and there are no noticeable abrasions. A worthy Gem of this plentiful issue. (#9186)
- 2363 1927 MS65 NGC.** The dynamic cartwheel sheen is comprehensive, and the apricot-gold surfaces are only lightly abraded. A good strike delivers most panes within the Capitol building. (#9186)

- 2364 1927 MS66 PCGS. CAC.** Housed in a green-label holder, this Premium Gem is an impressive piece with brilliant lemon-yellow surfaces and extraordinary eye appeal. Both sides have wonderful surfaces that are void of all but the tiniest blemishes. PCGS has only certified 12 finer examples (5/09). (#9186)

- 2365 1927 MS66 PCGS.** A flashy Premium Gem that displays a blend of vibrant orange-gold and delicate wheat-gold colors on each side. Crisply struck and vibrant with a nearly pristine reverse and only minor obverse grazes. PCGS has graded just 12 pieces finer (5/09). *From The Kiawah Collection.* (#9186)

- 2366 1928 MS65 NGC.** A charming yellow-gold Gem whose lustrous and carefully preserved features also exhibit a precise strike. The reverse is particularly minimally abraded. (#9189)

- 2367 1928 MS65 NGC.** Lightly die doubled on the designer's monogram and on nearby rays and foliage. This shimmering canary-gold Gem is impressively unabraded and has exemplary eye appeal. A well struck representative of this much-hoarded gold type. (#9189)

Resplendent 1928 Double Eagle, MS66 ★

- 2368 1928 MS66 ★ NGC.** Outstanding luster complements the rich yellow patina that envelops both sides. The strike is nearly full and there are only a few wispy abrasions, which are nearly unnoticeable to the unaided eye. The eye appeal is truly exceptional. NGC has certified only 77 examples in MS 66 ★. (#9189)

Premium Gem 1928 Double Eagle

- 2369 1928 MS66 PCGS.** A flashy and undeniably appealing sun-gold representative from the highest-mintage double eagle issue in American history. Excellent detail and abundant eye appeal combine for spectacular aesthetics. PCGS has graded 65 finer pieces (5/09). *From The Kiawah Collection.* (#9189)

TERRITORIAL GOLD

Lustrous A. Bechtler Gold Dollar, K-24, AU58

- 2370** (1842-52) A. Bechtler Dollar, 27G. 21C., Plain Edge AU58 NGC. K-24, R.3. As one of the plentiful Bechtler gold dollar varieties, this A. Bechtler piece is an excellent type coin for the collector who desires the very basic set of private gold coinage. Highly lustrous with brilliant green-gold surfaces and few grade-consistent marks. A wonderful opportunity. Listed on page 361 of the 2010 *Guide Book*. (#10040)

Kagin-Unlisted Lettered Edge, 887 Thous. 1851 Humbert Fifty, 12-Pointed Star Reverse

- 2371** 1851 Humbert Fifty Dollar, 887 Thous. 50 Reverse—Tooled—NCS. Variety unlisted in Kagin (1981). NCS does not designate a Details grade. This olive-gold example has been extensively tooled with moderate skill by a steady, patient hand. The eagle motif and the outer reverse ribbon show the most obvious retouching. The edge is lettered, the fineness is entered as 887 THOUS, and the reverse has 50 at the center, all characteristics of K-4 instead of K-3. But the reverse center has a prominent 12-pointed star, as seen on K-3 (listed as “unique” in Kagin) but no other Lettered Edge variety. All other Lettered Edge reverses have at their center a “small circular target enclosing 50,” as described in the standard Kagin reference. Despite the tooling, the present piece appears to be an extremely rare Kagin-unlisted variety of considerable interest to the Territorial gold specialist.
Ex: *Central States Signature* (Heritage, 5/2004), lot 10585. (#10208)

Popular 1853 Assay Office Twenty Dollar K-18, 900 Thous., XF Details

- 2372** 1853 Assay Office Twenty Dollar, 900 Thous.—Damaged—NCS. XF Details. K-18, R.2. A lightly circulated yellow-orange example of this relatively available but highly popular Territorial gold issue. Several rim bruises and two digs on the obverse, one to the right of the T in UNITED and the other to the left of the E in AMERICA, account for the details grade. Listed on page 364 of the 2009 *Guide Book*. (#10013)

1854 Kellogg ‘Double Eagle’ AU53 Elusive Short Arrows K-1b

- 2373** 1854 Kellogg & Co. Twenty Dollar AU53 PCGS. Short Arrows, K-1b, R.5. One of five different die marriages known for 1854 Kellogg & Co. twenties, all of which are very scarce. This is a straw-gold example with little wear and ample glimmering luster. Minor marks are distributed. Listed on page 374 of the 2010 *Guide Book*. Population: 16 in 53, 30 finer (6/09). (#10222)
- 2374** 1849 Moffat & Co. Five Dollar—Damaged—NCS. VF Details. K-4a, R.4. A bit bright from cleaning, but the scratch near 3 o’clock on the reverse takes patience to locate. A thin mark is also noted near the final star. Struck during the height of the California Gold Rush. Listed on page 363 of the 2010 *Guide Book*. (#10240)

S.S.C.A. RELIC GOLD MEDALS

- 2375** 1855 SSCA Relic Gold Medal “1855 Kellogg & Co. Fifty” Gem Proof PCGS. Struck August 20, 2001. Comes in the customary copper-and-glass frame and includes certificate of authenticity, outer box, and slipcase, but not the customary commemorative screwdriver. (#10358)
- 2376** 1855 SSCA Relic Gold Medal “1855 Kellogg & Co. Fifty” Gem Proof PCGS. Struck September 12, 2001, the last day of production. Comes with copper-and-glass frame (bottom of copper frame slightly bent), certificate with serial number 4323 printed, and outer box and slipcover, though the customary commemorative screwdriver is absent. (#10358)

CALIFORNIA FRACTIONAL GOLD

- 2377** 1853 Peacock Reverse 50 Cents, BG-302, Low R.4, AU58 PCGS. Those are glory rays above the eagle’s back, and the tail is obvious beneath the arrow. Yet the “Peacock” nickname has stuck, and it remains among the most coveted types within the Period One series. Considerable die rust marks this as a Die State II example. There is a retained rim cud joining the star behind Liberty’s head. Some luster remains on the golden-smoky surfaces. (#10422)
- 2378** 1854 Liberty Round 1 Dollar, BG-602, High R.6—Damaged—NCS. AU Details. A very rare Period One round dollar variety, identified by closely spaced FD initials on the obverse and a short, broad 1 between the upper wreath ends. A lustrous example, but slightly bent by a scrape on the wreath near the R in DOLLAR that flattens the hairbun opposite. (#10518)
- 2379** 1868 Liberty Octagonal 25 Cents, BG-711, R.4, MS66 PCGS. Lustrous brass-gold surfaces display fairly well struck design elements. A nicely preserved piece. Population: 5 in 66, 0 finer (5/09). (#10538)
- 2380** 1876 Liberty Octagonal 25 Cents, BG-778, Low R.7, AU58 PCGS. This octagonal quarter variety offers considerable rarity, and the present near-Mint piece is attractive. Dusky gold-orange surfaces are minimally marked with only minor friction on the high points. (#10605)
- 2381** 1880 Indian Octagonal 25 Cents, BG-799X, R.3, MS65 PCGS. A sharply struck sun-yellow Gem representative of this scarce variety, pleasingly preserved with warm and largely uniform luster. Intriguing eye appeal. Population: 16 in 65, 0 finer (5/09). (#10650)
- 2382** 1860/56 Liberty Round 50 Cents, BG-1014, High R.4, MS65 PCGS. Struck by Robert B. Gray & Co., described by Breen-Gillio as “successors to Antoine Louis Nouzillet.” This yellow-gold piece is well struck and nearly devoid of contact. The reverse has a network of fine die cracks. One of two Gems graded by PCGS, with none finer (5/09). (#10843)

Finest Certified R.8 BG-1016A 1864 Round Half MS63

- 2383** 1864 Liberty Round 50 Cents, BG-1016A, R.8 MS63 PCGS. PCGS has certified just three examples of BG-1016A, and the present piece is the single finest graded by two points. This piece is well struck, unlike the MS61 PCGS Jay Roe specimen, which has weakness on the portrait and the 8 in the date. Pleasing rose-red patina encircles the yellow-gold devices. A magnificent opportunity for the dedicated fractional gold collector. Ex: Long Beach Signature (Heritage, 5/2007), lot 3026, which realized \$5,750. (#10908)
- 2384** 1876/5 Indian Octagonal 1 Dollar, BG-1128 MS64 Deep Mirror Prooflike NGC. Incorrectly designated as BG-1129 on the NGC insert. Both varieties are from the same dies, but the R.4 BG-1129 was reengraved by the maker and has a berry left of the wreath bow. The sun-gold fields are mirrored and exhibit blatant contrast with the frosty devices. Well struck and unblemished. As of (6/09), no examples of BG-1128 have been given a Deep Cameo designation by NGC. (#710939)

End of Session Three

SESSION FOUR

(NO FLOOR OR PHONE BIDDING)

Heritage Live!™, Internet, Fax, and Mail Signature® Auction #1127
 Sunday, July 12, 2009, 10:00 AM CT, Lots 7001-9492

A 15% Buyer's Premium (\$14 minimum) Will Be Added To All Lots

Visit HA.com to view full-color images and bid.

SPECIAL INTERNET BIDDING FEATURE:

Online proxy bidding ends at HA.com two hours prior to the opening of the live auction. Check the Time Remaining on individual lots for details. After Internet proxy bidding closes, live bidding will take place through Heritage Live, our NEW bidding software that lets you bid live during the actual auction. Your secret maximum will compete against those bids, and win all ties. To maximize your chances of winning, enter realistic secret maximum bids before live bidding begins. (Important note: Due to software and Internet latency, bids placed through Live Internet Bidding may not register in time and those bidders could lose lots they would otherwise have won, so be sure to place your proxy bids in advance.)

9479 1878-CC MS62 NGC. NGC Census: (1839/8861). PCGS Population (2736/13688). Mintage: 2,212,000. Numismedia Wsl. Price for NGC/PCGS coin in MS62: \$225. (#7080)

9480 1878-CC MS63 NGC. NGC Census: (3858/4971). PCGS Population (6423/7233). Mintage: 2,212,000. Numismedia Wsl. Price for NGC/PCGS coin in MS63: \$280. (#7080)

9481 1878-CC MS64 NGC. GSA Soft Pack. NGC Census: (3862/1132). PCGS Population (5505/1739). Mintage: 2,212,000. Numismedia Wsl. Price for NGC/PCGS coin in MS64: \$465. (#7080)

9482 1880-CC MS61 NGC. NGC Census: (79/5117). PCGS Population (225/10029). Mintage: 591,000. Numismedia Wsl. Price for NGC/PCGS coin in MS61: \$446. (#7100)

9483 1880-CC MS64 NGC. NGC Census: (2164/1358). PCGS Population (3832/2721). Mintage: 591,000. Numismedia Wsl. Price for NGC/PCGS coin in MS64: \$570. (#7100)

9484 1881-CC MS65 NGC. NGC Census: (1742/747). PCGS Population (3973/1580). Mintage: 296,000. Numismedia Wsl. Price for NGC/PCGS coin in MS65: \$960. (#7126)

9485 1882-CC MS65 NGC. NGC Census: (2315/503). PCGS Population (4366/1048). Mintage: 1,133,000. Numismedia Wsl. Price for NGC/PCGS coin in MS65: \$440. (#7134)

9486 1883-CC MS66 NGC. NGC Census: (786/89). PCGS Population (1661/129). Mintage: 1,204,000. Numismedia Wsl. Price for NGC/PCGS coin in MS66: \$800. (#7144)

9487 1884-CC MS64 NGC. NGC Census: (6034/4260). PCGS Population (12414/7690). Mintage: 1,136,000. Numismedia Wsl. Price for NGC/PCGS coin in MS64: \$205. (#7152)

9488 1884-CC MS65 NGC. NGC Census: (2178/302). PCGS Population (1/0). (#407152)

9489 1884-CC MS65 NGC. NGC Census: (3517/742). PCGS Population (6296/1395). Mintage: 1,136,000. Numismedia Wsl. Price for NGC/PCGS coin in MS65: \$400. (#7152)

9490 1885-CC MS63 NGC. NGC Census: (1664/4720). PCGS Population (3834/10808). Mintage: 228,000. Numismedia Wsl. Price for NGC/PCGS coin in MS63: \$550. (#7160)

9491 1885-CC MS64 NGC. NGC Census: (1687/857). PCGS Population (0/0). (#407160)

9492 1922 MS62 NGC. GSA Soft Pack. NGC Census: (1180/101333). PCGS Population (5333/68284). Mintage: 51,737,000. Numismedia Wsl. Price for NGC/PCGS coin in MS62: \$22. (#7357)
